

Advances in Virus Research – Volume 99

Edited by

Martin Beer and Dirk Höper

Cover illustration: SBV-infected baby hamster kidney cells stained with an N-protein specific monoclonal antibody (Wernike et al., 2015a) raised against the first SBV isolate in combination with a fluorescein isothiocyanate (FITC-) conjugated goat anti-mouse IgG (Sigma-Aldrich Co.); the nuclei were stained with propidium iodide.

Contents

The first 'virus hunters'

T. Mettenleiter

Loeffler 4.0 – Diagnostic Metagenomics

D. Höper, M. Beer

Schmallenberg Virus – A Novel Virus of Veterinary Importance

K. Wernike

Assessing the Diversity of Rodent-Borne Viruses: Exploring of High-Throughput Sequencing and Classical Amplification/Sequencing Approaches

R. Ulrich

The Expanding Field of Mammalian Astroviruses: Opportunities and Challenges in Clinical Virology

T. Seuberlich

New Leaves in the Growing Tree of Pestiviruses

S. Blome

Bluetongue Virus: From BTV-1 to BTV-27

S. Zientara Sr., B. Guillaume

The Recently Discovered Bokeloh Bat Lyssavirus – Insights into its Genetic Heterogeneity and Spatial Distribution in Europe and the Population Genetics of its Primary Host

T. Müller, C. Freuling

Software Dedicated to Virus Sequence Analysis – "Bioinformatics Goes Viral"

M. Marz
