

Cellular Migration and Formation of Axons and Dendrites

Second Edition

- The Comprehensive Developmental Neuroscience series:
 - i. Patterning and Cell Type Specification in the Developing CNS and PNS
 - ii. Cellular Migration and Formation of Axons and Dendrites
 - iii. Synapse Development and Maturation
 - iv. Neural Circuit and Cognitive Development
 - v. Neurodevelopmental Disorders
- Features leading experts in the field as section editors and article authors
- All articles are peer-reviewed to ensure scholarship
- Comprehensively covers topics in all aspects of nervous system development
- Highlights the latest advances in a rapidly evolving field

The structural organization and neural circuits that support the remarkable cognitive, perceptive, and motor functions of the nervous system are established during development. Mechanistic knowledge of neural development at the molecular, cellular, and circuit levels is essential to the understanding of brain evolution and disorders of the brain. Recent advances in genetic, genomic, imaging, and circuit techniques have enabled paradigm-shifting discoveries in the field. There remains, however, a paucity of comprehensive and up-to-date syntheses, references, and historical perspectives on this important subject. The Comprehensive Developmental Neuroscience series addresses this gap, offering the most thorough coverage of this field and addressing all aspects of how the nervous system and its components develop. The second edition of the series provides a much-needed update to underscore the latest research in this rapidly evolving field.

Cellular Migration and Formation of Axons and Dendrites, Second Edition, the latest release in the Comprehensive Developmental Neuroscience series, comprehensively covers topics in cellular migration, neuronal polarity, axon guidance, and dendrite development.

About the Editors-in-Chief

John Rubenstein

Professor, Department of Psychiatry, University of California, San Francisco, USA

Pasko Rakic

Professor of Neuroscience, Yale School of Medicine, USA

Bin Chen

Professor of Molecular, Cell, and Developmental Biology, University of California, Santa Cruz, USA

Kenneth Y. Kwan

Assistant Professor of Human Genetics and Michigan Neuroscience Institute, University of Michigan, USA
