

ADVANCES IN MICROBIAL PHYSIOLOGY

EDITED BY ROBERT K. POOLE

C O N T E N T S

The electrifying physiology of *Geobacter* bacteria, 30 years on
Gemma Reguera and Kazem Kashefi

Stress-induced adaptive morphogenesis in bacteria
Eveline Ultee, Karina Ramijau, Renus T. Dame, Ariane Briegel and Dennis Claessen

Hydrogenases and H_2 metabolism in sulfate-reducing bacteria of the *Desulfobrevibrio* genus
Carole Buffert, Arlette Kpebe, Luisana Avilan and Myriam Brugna

Regulation of organohalide respiration
Julien Maillard and Mathilde Stéphanie Willemin

The function, biogenesis and regulation of the electron transport chains in *Campylobacter jejuni*: new insights into the bioenergetics of a major food-borne pathogen
Aidan J. Taylor and David J. Kelly

The plethora of membrane respiratory chains in the phyla of life
Patricia N. Refojo, Filipa V. Sena, Filipa Calisto, Filipe M. Sousa and Manuela M. Pereira

Reduction of hydrogen peroxide in gram-negative bacteria - bacterial peroxidases
Cláudia S. Nóbrega and Sofia R. Pauleta

Formate Hydrogenlyase: a Group 4 [NiFe]-hydrogenase in tandem with a formate dehydrogenase
Alexander J. Finney and Frank Sargent

Bioenergetic aspects of archaeal and bacterial hydrogen metabolism
Constanze Piuske

Cover illustration: The Hydrogen-Linked Formate Dehydrogenase-II (FdhF) from *E. coli*. Credit to the protein data bank (1AA6). For further details see the article by Alexander J. Finney and Frank Sargent in this volume.
