

"It's the first appropriate-level textbook for students, very readable and well illustrated. I tried four different texts over the past five years, and this is the first one that the students and I agree is quality. I especially like the discussions of marine biology principles and the up-to-date discussions of pertinent literature. Congratulations on an excellent book."

— Gary R. Gaston, *University of Mississippi*

This new and revised second edition of Jeffrey S. Levinton's *Marine Biology: Function, Biodiversity, Ecology* promises to be as fascinating and informative as the first, with additions that bring it up-to-date on current research issues. Designed for one-semester courses, this established volume stands as one of the most current and thorough resources for students in the multidisciplinary field of marine biology. The new edition includes significantly expanded coverage of marine mammals and hypothesis testing and offers entirely new sections on subtidal rocky reefs, metapopulations, marine invasions, marine protected areas and no-take fishery zones, and molecular approaches to marine biology and fisheries. It emphasizes the relationship of the functional ecology of organisms to higher levels of organization, including major marine habitats and ecosystems. The book effectively describes a variety of current research areas, conveying the dynamic range of activity in the field and teaching students that scientific study is an active and ongoing process by means of Hot Topics Essays in Marine Biology. Complementing the text are a wealth of pedagogical features, including 32 full-color plates and expanded text boxes that highlight important and current research topics.

FEATURES

- The CD-ROM "Marine Biology Explorations," revised with a guided tour of marine environments on approximately 450 color slides, annotated with informative descriptions
- A website maintained by the author
- An associated laboratory manual: *Exploring Marine Biology* by Paul Haefner
- Ancillary PowerPoint® lectures available on CD-ROM with illustrations from the text
- A self-test keyed to the chapters

ABOUT THE AUTHOR

Jeffrey S. Levinton is a professor at the State University of New York at Stony Brook. He is a proven textbook author, has taught marine biology for over 20 years, and is one of the most highly respected researchers in his field.
