

With its clear explanations, frequent diagrams, and a user-friendly design, this text provides integrated coverage of biochemistry and molecular cell biology, focusing on the essential principles that underpin modern life science.

NEW TO THIS EDITION

- Entirely updated figures and diagrams are easier to interpret, explaining complex processes with examples of the biochemistry at work.
- New 'find out more' sections signpost further reading, strengthen the book's biomedical focus, and highlight the real-world significance of the subject.
- Summary and further reading sections are redesigned as bulleted lists, guiding you through the key concepts while keeping the big picture in mind.
- A restructured introduction enhances understanding of core principles, making it even more suitable if you are encountering the subject for the first time.
- Updated content on gene expression reflects the centrality of this fast-paced subject to our understanding of molecular biology.

Despo Papachristodoulou is reader in Biochemistry, King's College London, UK

Alison Snape is Senior Lecturer in Biochemistry, King's College London, UK

'Complex concepts are superbly simplified, reinforced and illustrated!'

Racheline Rogers, The University of Adelaide, Australia

'Written in a very approachable and friendly style that makes it easy for students to engage. Good use of figures and well laid-out.'

Mark Leyland, University of Leicester, UK

'Presents classical biochemistry material with a balanced emphasis on details and conceptual understanding. Explanations are given in a conversational manner so that students are not distracted by an over-whelming amount of new terminology.'

Amanda Storm, James Madison University, US

'Gives students an overview of the diversity of biochemistry and introduces abstract concepts in a well-explained and accessible way.'

Dirk Wildeboer, Middlesex University, UK

For registered adopters:

- Figures from the book available to download

For students:

- Further reading organised by chapter
- An extensive bank of multiple-choice questions to support self-directed learning
- Links to 3D molecular structures in Protein Data Bank
