

Exceptionally clear explanations, frequent diagrams, and a user-friendly design and layout make this the ideal text for any student encountering biochemistry and molecular cell biology for the first time.

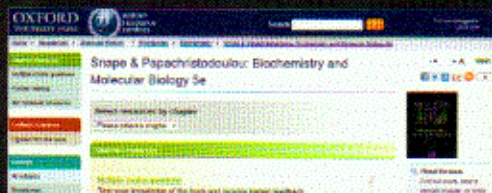

NEW TO THIS EDITION

- A new chapter on the general principles of nutrition introduces you to the key principles underlying complex metabolic pathways.
- A new chapter on the control of gene expression reflects the increasing emphasis on gene regulation in contemporary research.
- A strengthened biomedical focus provides extra context to the processes and concepts being described.
- Two new authors, Despo Papachristodoulou and Alison Snape, bring additional teaching and research experience in biochemistry and molecular biology to the book.

For registered adopters of the book

- Figures from the book available to download

For students

- Further reading organized by chapter, linked to the book via QR codes
- An extensive bank of multiple-choice questions for self-directed learning
- Links to 3D molecular structures

'Easy to read, with good use of simple figures, and plenty of internal cross-references to other chapters or relevant pages. I was impressed with the inclusion of some very up-to-date findings.'

Dr Peter Morris, School of Life Sciences, Heriot-Watt University

'I don't know of any other biology/biochemistry book that explains DNA replication as well as this one.'

Lynn Rogers, School of Molecular and Biomedical Science, Adelaide University

'The style is very clear, logical, and systematic. The diagrams complement the text well.'

Dr Momna Hejmadi, Department of Biology and Biochemistry, University of Bath
