

"Far more than natural selection, sexual selection was distinctively Darwin's own theory, and it underpinned, albeit not without considerable controversy, much of his wider evolutionary thinking. In meticulously reconstructing just how Darwin formulated his controversial concept of the struggle for mates, Richards provides perhaps the richest and most detailed account of the making of any scientific theory. Ranging from Enlightenment physiognomy to Victorian high fashion, and examining an unprecedented array of both Darwin's own writings and his voluminous reading, *Darwin and the Making of Sexual Selection* is a tour de force of rigorous historical scholarship."

GOWAN DAWSON,

author of *Show Me the Bone: Reconstructing Prehistoric Monsters in Nineteenth-Century Britain and America*

"A towering achievement and a magnificent feast. All the leading Darwin themes are here: race, empire, capital, sex, gender, marriage, family, breeding, class, competition, mind, brain, heredity, embryology, ancestry, adaptation, progress, fashion, aesthetics, morals, politics, and religion. All are related to one another and to Darwin's theory of sexual selection with cogent, comprehensive, contextual interpretations; incisive, meticulous, textual explications; tireless, critical, archival research; and judicious, sensitive, biographical scholarship. There is no better book on Darwin."

JONATHAN HODGE,

author of *Darwin Studies: A Theorist and His Theories in Their Contexts*

"Brilliantly written and deftly constructed, this epic work sets Darwin's theorizing about sex, race, and reproduction in a long-term context extending from the late Enlightenment to the end of the Victorian era. It provides an entirely fresh account of the development of the theory of sexual selection, tracing its origins in issues ranging from birth control and radical politics to feminine fashion and the marriage market. A landmark not only in Darwin studies, but also in our understanding of the era in which science achieved unprecedented authority as the arbiter of truth."
