

'Truly great thinkers are deserving of worthy proponents. The influence of Darwin, and the far-reaching implications of Darwinian theory to psychology and beyond, are skilfully consolidated by Professor Workman in this illuminating text.' – Michael Dunn, Senior Lecturer in Psychology, Cardiff Metropolitan University, UK

There are few aspects of the modern world that remain untouched by Charles Darwin's legacy. His ideas have affected everything from science to religion, and have influenced debates about ethics, animal welfare and nature versus nurture. But who was Charles Darwin, and why has he remained such a pivotal and controversial figure over a hundred years on from his death? How has Darwinism changed psychology, biology and the behavioural sciences? Lance Workman, an expert in evolutionary psychology, explores these questions in this thought-provoking introduction to the life, works and legacy of one of science's greatest thinkers. It is essential reading for anyone interested in evolution and the human condition.

Lance Workman is Visiting Professor of Psychology at the University of South Wales, UK. Previously Head of Psychology at Bath Spa University, he has published widely on biological and evolutionary psychology. He regularly appears in the media where he comments on developments in psychology and is co-author of *Evolutionary Psychology*.
