

"How to 'protect nature' when nature perennially ignores the places we've set aside for it is the profound question that makes Robert Wilson's *Seeking Refuge* such a suggestive and important book."

—from the foreword by **WILLIAM CRONON**

Seeking Refuge brilliantly reveals the interconnections between wildlife refuges and agricultural systems in the West. Irrigated agriculture fed a hungry nation while it created wetland habitat for migratory waterfowl. But the toxic wastewater running off farm fields poisoned both chicks and children. Clearly argued and wonderfully written, *Seeking Refuge* illuminates the intricate connections between wildlife and people in America."

—**NANCY LANGSTON**
UNIVERSITY OF WISCONSIN-MADISON

"The author's skill in examining the interplay between wild birds, their increasingly manufactured habitats, and the varied human institutions responsible for altering them makes for a compelling story that readers will find fascinating."

—**WILLIAM K. WYCKOFF**
MONTANA STATE UNIVERSITY

Robert Wilson has provided us with the portrait of a win-win ecology, one where the needs of a bewildering variety of migratory waterfowl are met even amidst the surging activity, agriculture, and land transformations of humankind. More than this, he has shown us that such reconciliation ecologies are very political indeed.
