

BIRDS OF NEW ZEALAND is the definitive introduction to the extraordinary avian life there. More than 1,000 new photographs and the latest expert information on the 365 bird species found in New Zealand provide details about key identification characteristics and variation by age and sex, taxonomy, behavior, bird calls, distribution, and conservation status, as well as Māori, English, and scientific names. A copy of this must-have guide belongs in the luggage of every naturalist traveling to these remarkable islands.

"Upon returning from a trip to New Zealand last year, I had one regret: Scofield and Stephenson's brilliant new guide was not yet available! When you go, take this book. It will enhance any birder's experience with the stunning photos, maps, and detailed notes on identification, biology, and taxonomy of one of the world's premier island bird faunas!"

— John Marzluff, coauthor of *Dog Days, Raven Nights: Gifts of the Crow* and *In the Company of Crows and Ravens*

"Scofield and Stephenson's book will be a major step above all others in the market, both in its scholarship and the quality of photography. It will be a 'must-have' for birders."

— Phil Battley, Massey University
