

"Provocative...disturbing...No question is too speculative, remote or absurd for Silver...He entertains even the wildest and most speculative notions because—as he argues persuasively—the future is already here."

—*The New York Times Book Review*

"*Remaking Eden* is the most important book about modern biology that I have seen recently...Lee Silver has very effectively brought his great knowledge of biology to bear on the issue of where new genetic and physiologic technologies are taking human reproduction. He has seen the future clearly and presents it in a thoughtful, accessible, and imaginative fashion."

—David Baltimore, Nobel laureate and President of California Institute of Technology

"Where can we expect this new era to take us? Lee M. Silver has some answers, and if you think you are opposed to cloning human beings, be prepared for a major reassessment...*Remaking Eden* should be required reading for politicians before they consider legislation regarding human cloning."

—*San Jose Mercury News*

"Silver is a fantastic new voice...He's brilliant. He's simultaneously level-headed and a mesmerizing prophetic visionary."

—Randolph Wicker, founder and president of United Clone Front

"Highly recommended...a splendid romp through fertility clinics and laboratories where new ways of making babies are explored.

Full of facts and good stories."

—Freeman Dyson, author of *Imagined Worlds* and *Disturbing the Universe*
