

"Mesmerizing stuff. . . Richard Francis provides an excellent non-technical introduction to the scientific underpinnings of this discomfiting new genetics. . . He reviews the literature on the epigenetic causes of obesity, neurological disorders, and stress."

—JUDITH SHULEVITZ, *NEW REPUBLIC*

"*Epigenetics* explains [the science] in clear, no-nonsense prose. . . One particularly excellent chapter explains epigenetic change through the body of steroid-addled baseball player Jose Canseco, from his brain to his testicles."

—JOSH ROTHMAN, *BOSTON GLOBE*

"A guided tour of this mysterious new landscape. . . It's not often that you find Jose Canseco, mouse mothers, Dutch famine victims, sea urchins, identical twins, and Tasmanian Devils all in the same book, but you will here. . . Francis hits the highlights."

—TINA HESMAN SAEY, *SCIENCE NEWS*

"Francis' thoughtful and succinct book focuses on the narrative and the excitement of discovery. . . A seasoned science writer, Francis is at his best when describing abstract concepts in an historical context."

—JONATHAN WEITZMAN, *NATURE*

RICHARD C. FRANCIS is a freelance writer with a PhD in neurobiology and behavior from Stony Brook University. He is the author of *Why Men Won't Ask for Directions: The Seductions of Sociobiology*. He and his wife live in Brooklyn, New York.
