

CURRENT PROTOCOLS IN MOLECULAR BIOLOGY

with Quarterly Update Service

Edited by Frederick M. Ausubel, Roger Brent, Robert E. Kingston,
David D. Moore, J. G. Seidman, John A. Smith, and Kevin Struhl

This manual provides detailed coverage of all protocols included in *Short Protocols in Molecular Biology*, plus expanded coverage of more specialized topics such as immunology, DNA-protein interactions, yeast molecular biology, in situ hybridization, and immunohistochemistry. Edited and written by the same authors as *Short Protocols in Molecular Biology*, this two-volume manual is published in looseleaf format to accommodate the 100-page supplements issued each quarter. Supplements become part of the core volume as soon as they are published, so that the manual is completely current when purchased. A subscription to the update service will ensure that your manual never becomes outdated.

With every basic, alternate, and support protocol, the following information is provided:

- concise summary of approach and listing of all reagents and special equipment, with recommended suppliers where appropriate
- step-by-step description of the technique, with detailed annotations explaining the "hows" and "whys"
- full recipes for required reagents plus recommended storage and safety practices
- standardized commentaries on background information, critical parameters, troubleshooting, anticipated results, time considerations, and key references

"This is a thoroughly satisfying compilation, very user-friendly and well laid-out. The core volume contains a wide range of methods, including some of which were new to us . . . and the promise of updates will ensure the book will remain popular. It has been well edited and great care has been given to presentation." — *Nature*

"This book represents a great effort by the authors in compiling all current pertinent information and by the editors in weaving it into a highly desirable format and maintaining a truly exceptional level of presentation by a wide range of authors. It is highly recommended. . . ." — *Journal of the American Medical Association*

ISBN: 0471-50838-X, two volumes, 1000+ pages (page count increases with the release of each quarterly supplement), over 200 tables and illustrations
