

Our Human Story is a guide to our fossil relatives, from what may be the earliest hominins such as *Sahelanthropus*, dating back six to seven million years, through to our own species, *Homo sapiens*.

Over the past 25 years there has been an explosion of species' names in the story of human evolution, due both to new discoveries and to a growing understanding of the diversity that existed in the past. Drawing on this new information, as well as their own considerable expertise and practical experience, **Louise Humphrey** and **Chris Stringer** explain in clear and accessible language what each of the key species represents, and how it contributes to our knowledge of human evolution.
