

Enhance your learning in Biology with the following supplements:

Study Guide to accompany *Biology: The Network of Life*, Second Edition by Amy Hacker and Mette Hansen assists students' learning of the biological content while developing an understanding of the scientific process. Each chapter includes a *Concept Outline* overviewing the topics covered in a specific chapter; *Orientation to Reading* summarizes and condenses the reading material; *Chapter Challenges* offers tips and suggestions for learning challenging topics; *Reading Questions* covers the major topics and is referenced to the page where the answer can be found; *Central Concepts* defines key terms; and *Critical Thinking* questions apply the concepts to novel situations.
ISBN 0-673-52353-5

HarperCollins Dictionary of Biology by W.G. Hale and J.P. Margham covers all the major subjects—atomy, biochemistry, ecology, evolutionary theories—plus has biographies of important biologists. It contains 5600 entries that provide in-depth explanations and examples. Diagrams illustrate such concepts as genetic organization, plant structure, and human physiology.
ISBN 0-06-461015-2

Writing About Biology by Jan Pechenik of Tufts University. Writing guides for laboratory reports, research proposals, research papers, essay exams, oral presentations, and applications for jobs or graduate schools are included. This brief guide prepares students to meet the demands of writing at all levels of biology.
ISBN 0-673-52128-1

Studying for Biology by Anton Lawson of Arizona State University provides students with the necessary tools needed to enhance their study skills. Several chapters cover the thinking patterns that biologists use to answer questions and formulate hypotheses and theories.
ISBN 0-06-50065-X

Doing Biology by Joel Hagen of Radford University, Douglas Allchin of University of Texas-El Paso, and Fred Singer of Radford University presents a series of seventeen case studies featuring important biological discoveries, controversies, and ideas surrounded by the central theme of science as a process. Written to engage students in problem-solving through embedded questions and exercises with actual data and real problems, *Doing Biology* offers students a deeper understanding of both the process and content of biology.
ISBN 0-673-99638-7
