

AMPHIBIANS *of the* PACIFIC NORTHWEST

More than a field guide, this book is a compendium representing the expertise of more than 30 authors.

Features include:

Introductory Chapters—providing the reader with a foundation in amphibian biology.

A Broad Context—covering the entire Pacific Northwest region from north-central California to the Yukon and Alaska and from the Pacific coast to Montana.

New Species—introducing the California Red-legged Frog, the Rocky Mountain Tailed Frog, the Wandering Salamander and the Scott Bar Salamander.

Comprehensive Coverage—showing 47 species with color photos of all life stages. Clear text, keys, maps and illustrations will guide you to the discovery of the elusive amphibians of the Pacific Northwest.
