

"With ground-breaking contributions from a renowned cast of international scholars *General Ecology* issues a call to arms to anyone interested in the concept of the environment. By radicalizing several strands of research in the humanities and social sciences, including cybernetics, phenomenology, systems theory, process philosophy and discourses on the anthropocene, the essays gathered here transform our approach to the concept of ecology along three axes. In variant and often mind-expanding ways, we are urged to substitute a 'general ecology of relations' for the mathematization of relation central to contemporary global capital, to invest in a third stage environmental cybernetics rooted in the 'technoecology of sense,' and to resist the 'Anthropocene illusion' by tracking the explosion of environmental agencies in today's global 'technosphere.' *General Ecology* offers nothing less than a new ecological image of thought."

MARK B. N. HANSEN, Professor of Literature and Director of Undergraduate Studies at Duke University, USA

"A brilliant collection that interrogates and exemplifies the current turn in critical theory to ecology and the environment. Bringing together the very best thinkers, it maps the entangled relationship between the ecological and the technological. A must read."

WENDY HUI KYONG CHUN, Professor of Modern Culture and Media, Brown University, USA

ERICH HÖRL is a philosopher and cultural theorist. He is professor of Media Culture at the Institute of Culture and Aesthetics of Digital Media (ICAM) at Leuphana University of Lüneburg, Germany.
