

THE HOLOCENE

AN ENVIRONMENTAL HISTORY

THIRD EDITION

NEIL ROBERTS

The Holocene provides students, researchers and lay-readers with the remarkable story of how the natural world has been transformed since the end of the last Ice Age around 15,000 years ago. This period has witnessed a shift from environmental changes determined by natural forces to those dominated by human actions, including those of climate and greenhouse gases. Understanding the environmental changes — both natural and anthropogenic — that have occurred during the Holocene is of crucial importance if we are to achieve a sustainable environmental future.

Revised and updated to take full account of the most recent advances, the third edition of this classic text includes substantial material on the scientific methods that are used to reconstruct and date past environments, as well as new concepts such as the Anthropocene. The book is fully illustrated, global in coverage, and contains case studies, a glossary and more than 500 new references.

NEIL ROBERTS is Professor of Geography at Plymouth University in the UK and has been Visiting Senior Researcher at Stanford University, CA. His main research interests are in Holocene environmental change, especially lake sediment records of climate and human impact in Mediterranean regions. He is a fellow of the Royal Geographical Society, and served on the US National Academies Committee on climate changes of the last 2,000 years.

There is a free companion website available for this book at www.wiley.com/go/roberts/holocene

On the site you will find:

- Downloadable versions of the illustrations within the book
- Downloadable versions of the tables within the book
- Downloadable versions of the technical boxes within the book
