THE PHYSIOLOGY OF FISHES, Fourth Edition

Edited by David H. Evans, James B. Claiborne, and Suzanne Currie

*"The new edition of **The Physiology of Fishes** seems likely to continue the trend of the two previous editions that have each been regarded at the time as the best single reference text for fish physiology The multi-author approach of [this book] works well in providing detailed reviews with a high level of insight. ... Overall, **The Physiology of Fishes** provides a series of stimulating and valuable reviews that emphasize future directions for research."*

—Anne Brown, University of Exeter & Aquatronics Ltd, *Journal of Fish Biology*, March 2007, Vol. 70

"Most of the chapters are written by one or two of the leading researchers in the field All of the chapters have large and up-to-date bibliographies that will be a starting point for further research.... it will be ideal for graduate students who have already mastered the concepts and language of comparative physiology. For fish biologists whose days of coursework are over, it will be a valuable resource and reference."

—Stephen D. McCormick, Conte Anadromous Fish Research Center, in *The Quarterly Review of Biology*, Vol. 82, No. 2, June 2007

Like its bestselling predecessors, this newly updated and completely revised fourth edition of **The Physiology of Fishes** provides comprehensive coverage of the most important aspects of the form and function of fishes. Written by an international group of experts, this book contains fresh approaches, with completely new treatments of the original topics and the addition of the following new chapters: Muscle Plasticity, Membranes and Metabolism, Oxygen Sensing, Endocrine Disruption, Pain Perception, Cardiac Regeneration, and Neuronal Regeneration. The fourth edition remains a must-have reference for those involved in aquatic biology, ichthyology, fisheries science, and comparative physiology. It continues the tradition of providing extensive chapter bibliographies to serve as a springboard for more advanced research.
