

**Wojciech Halicki**, is an Environmental Engineer and a Doctor of Biological Science. He received his PhD in 1998 and his habilitation (post doc) in ecology in 2001, both from the University in Vechta, Germany. He worked as a Professor at Cardinal

Stefan Wyszyński University in Warsaw, Poland, in the Department of Biology and Environmental Science until 2017 and was a Visiting Professor at the State University in Tomsk, Siberia, in Calgary, Canada, and in El Paso, Texas, in the United States. In addition to his research and teaching work, Dr. Halicki has led the Institute for Applied Ecology in Poland since 2002, a private institution that includes an ecological farm of one hundred hectares of extensively managed wetlands and breeding cattle and bison. He is the author of two patents and numerous technical projects in the field of constructed wetlands. His main research interests are environmental conditions in relation to economic development and climate changes worldwide. He has performed scientific expeditions in Europe, Asia, and the Americas. Dr. Halicki is an author of five books and more than seventy publications in Polish, German, Russian, and English.
