

THE SCIENCE AND PRACTICE OF ECOLOGICAL RESTORATION

Advance praise for *Ecological Restoration*, Second Edition

"One of our best tools for confronting urgent global environmental challenges is ecological restoration, described with clarity and skill in this revised edition of the book that sets the standards in this field."

—**PETER H. RAVEN**, President Emeritus, Missouri Botanical Garden

"Clewell and Aronson have outdone themselves! This new edition has all the background and theory that underpin restoration ecology, as well as the controversies over goals and methods that roil the field today. The new virtual field trips take readers into the trenches and detail the challenges and promise of the entire enterprise with well-chosen case histories."

—**DANIEL SIMBERLOFF**, Nancy Gore Hunger Professor of Environmental Studies,
University of Tennessee

"We know that investments in restoring ecological systems bring significant returns, enhancing the capacity of communities to adapt to climate change and improve food security, and leading to more effective efforts to alleviate poverty and protect the natural assets upon which economic growth depends. Clewell and Aronson have provided an unrivaled guidebook that enables readers to understand the science of ecological restoration, how it developed, and what to expect from this vitally important discipline in the future."

—**PAVAN SUKHDEV**, Founder and CEO of GIST Advisory, and author of *Corporation 2020: Transforming Business for Tomorrow's World*

ANDRE F. CLEWELL is a consulting restoration practitioner and plant ecologist, and former president for the Society of Ecological Restoration. **JAMES ARONSON** is a restoration ecologist at both the Center of Functional and Evolutionary Ecology in Montpellier, France, and the Missouri Botanical Garden in Saint Louis. He serves on the board of directors for the Society of Ecological Restoration.
