

Apoptosis Handbook

About the Book

Apoptosis refers to the procedure of programmed cell death (PCD). This book reflects the recent research studies on apoptosis in medicine. It provides an introduction of apoptosis to the uninitiated. It also discusses its applications in normal physiology during bone resorption under mechanical stress and deals with the analysis of apoptosis in a number of pathological conditions with special emphasis on cancer.

About the Editor

Max Cowen, MD, PhD is a medical researcher, professor, physician and author based in Washington, United States. He has conducted researches in the field of programmed cell death and its impact on human health and diseases. His current research work is focused on the implications of apoptosis in diseases. Cowen is the recipient of several awards; and has been awarded more than 40 research grants for his work. He is also on the editorial board of reputed scientific journals and has produced numerous articles, journal papers and books in the field of biology and medicine.
