

Biodiversity: Sustaining Life

About the Book

The understanding of the concept of biodiversity and its impact on various life forms is a complex study. In this book, using case studies and examples, constant effort has been made to make the understanding of the difficult concept of biodiversity as easy and informative as possible for the reader.

About the Editor

Jason Hendon received his PhD in biodiversity conservation from Bangor University, United Kingdom. He is a professor, author and speaker. He has addressed various issues of environmental conservation through his articles and presentations. His academic and research interests lie in the fields of environmental sustenance, conservation biology and habitat conservation among many more. He has been associated with over 25 initiatives and drives for environmental conservation over the past decade.
