

Dr. Sónia A.P. Santos holds a PhD in Biology/Entomology and is a researcher at the Mountain Research Center, School of Agriculture of Bragança Polytechnic Institute of Bragança, as well as an invited Assistant Professor at the Barreiro School of Technology, Polytechnic Institute of Setúbal, Portugal. She has coordinated two research projects and has participated in several research projects devoted to the study of crop protection and biological control in Mediterranean woody plants (i.e., olive, chestnut, almond trees and vineyards). She has published twenty-eight peer-reviewed articles in *ISI/SCOPUS*, nineteen papers in proceedings, and two international book chapters. She has given ten talks and authored more than ninety presentations at international and national conferences. She currently supervises two PhD students and has successfully completed the supervision of five masters. Her main areas of research include the development and validation of ecological and biodiversity indicators and development of strategies and habitat manipulation programs to promote functional biodiversity (natural enemies of pests) in agro-ecosystems.
