

Animal Cell Biology

About the Book

The researches that fall under animal cell biology integrate diverse biological fields such as molecular biology, development biology, etc. This book strives to provide a fair idea about this discipline and to help develop a better understanding of the recent advances within this field with the help of concepts related to molecular genetics, immunology, cellular metabolism, etc. A number of latest researches by experts from around the globe have been included in this book. It aims to further the scope of research in this field and contribute to its progress.

About the Editor

Ralph Becker is a graduate in microbiology and a PhD in cell biology from the University of Guelph, Canada. He is an associate professor in an American University in the Department of Biological Sciences. His work is based on cell metabolism, DNA structure and artificial chromosomes. Becker is a well-known author of books, articles and scientific journals in the field of molecular and cell biology. His writings have won him several global laurels.
