

At a time when the problem of invasive species is becoming ever more pressing in countries worldwide, *Plant Invaders* provides an accessible and authoritative account of the subject and offers a guide to the protection of natural habitats and the management of different ecosystems.

The handbook includes a comprehensive list of some of the worst invasive species, with countries of origin and regions of introduction, and extensive case studies from North America, Europe, Australia, South and South-East Asia and the Pacific and Atlantic islands. It examines the nature of plant invasion, how invasion occurs, the action against invasive plants and representative invasive species. This important manual will have a wide appeal not only for academics and students but also for those concerned with the practical conservation of plants and ecosystems and land management.

Quentin Cronk is a lecturer at the Royal Botanic Garden Edinburgh and at the University of Edinburgh. **Janice Fuller** is a research associate at Harvard Forest, Harvard University.
