

In order to summarize the latest data of Chinese rove beetles, we compiled the present catalogue based on reviewing relevant literatures published before 1st January 2019, and recorded a total of 22 subfamilies, 578 genera, and 6,486 species (including subspecies). Data on simplified type locality, type depository, synonyms, homonyms, original and current genus-species combinations, and geographical distributions of each species were provided. A full bibliography was given. The purpose of this catalogue is to provide convenience for specialists to consult, and hope to promote future research regarding Staphylinidae.
