PART ONE

Introduction 1

- 1 What is Biology? 1

PART TWO

Cells: Anatomy and Action 23

- 2 The Basics of Life: Chemistry 23
3 Organic Chemistry:
The Chemistry of Life 41
4 Cell Structure and Function 63
5 Enzymes 91
6 Biochemical Pathways 103
7 DNA and RNA: The Molecular
Basis of Heredity 133

PART THREE

Cell Division and Heredity 157

- 8 Mitosis: The Cell-Copying
Process 157
9 Meiosis: Sex-Cell Formation 169
10 Mendelian Genetics 189

PART FOUR

Evolution and Ecology 205

- 11 Diversity Within Species 205
12 Natural Selection
and Evolution 221
13 Speciation and Evolutionary
Change 239
14 Ecosystem Organization and
Energy Flow 259
15 Community Interactions 283
16 Population Ecology 303
17 Evolutionary and Ecological
Aspects of Behavior 319

PART FIVE

Physiological Processes 339

- 18 Materials Exchange
in the Body 339
19 Nutrition: Food and Diet 363
20 The Body's Control
Mechanisms 387
21 Human Reproduction, Sex,
and Sexuality 411

PART SIX

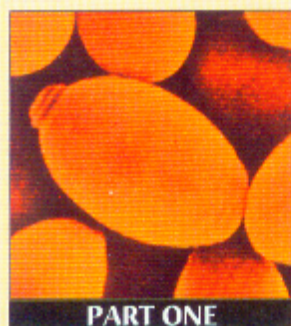

The Origin and Classification of Life 435

- 22 The Origin of Life
and Evolution of Cells 435
23 The Classification and
Evolution of Organisms 455
24 Microorganisms: Bacteria,
Protista, and Fungi 475
25 Plantae 493
26 Animalia 513

Preface ix
Guided Tour xiii

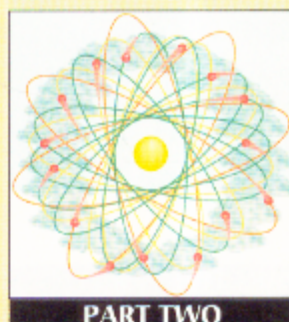

PART ONE

Introduction 1

1 What Is Biology? 1

- Chapter Outline* 1
- Goals and Objectives* 1
- 1.1 The Significance of Biology in Your Life 2
- 1.2 Science and the Scientific Method 2
 - Observation 3
 - Questioning and Exploration 4
 - Constructing Hypotheses 4
 - Testing Hypotheses 6
 - The Development of Theories and Laws 7
 - Communication 8
- 1.3 Science, Nonscience, and Pseudoscience 8
 - Fundamental Attitudes in Science 8
 - From Discovery to Application 8
 - Science and Nonscience 8
 - Pseudoscience 10
 - Limitations of Science 10

- 1.4 The Science of Biology 11
 - Characteristics of Life 11
 - Levels of Biological Organization 13
 - The Significance of Biology 15
 - Consequences of Not Understanding Biological Principles 16
 - Future Directions in Biology 19
- Summary* 20
- Thinking Critically* 20
- Concept Map Terminology* 20
- Key Terms* 21
- Learning Connections* 21

PART TWO

Cells: Anatomy and Action 23

2 The Basics of Life: Chemistry 23

- 2.1 The Structure and Function of Living Things 24
- 2.2 Energy and Life 24
- 2.3 What Is the Nature of Matter? 25
 - Atoms and Molecules 25
 - States of Matter 27
- 2.4 Molecules and Kinetic Energy 27
- 2.5 Structure of the Atom 28
 - Locating Electrons 29
- 2.6 Chemical Change 29
 - Ions and Ionic Bonds 29
 - Covalent Bonds 31

- 2.7 Water: The Essence of Life 32
 - Mixtures and Solutions 33
- 2.8 Chemical Reactions 33
 - Oxidation-Reduction Reactions 35
 - Dehydration Synthesis Reactions 35
 - Hydrolysis Reactions 35
 - Phosphorylation Reactions 36
 - Acid-Base Reactions 36
- 2.9 Acid, Bases, and Salts 36

3 Organic Chemistry: The Chemistry of Life 41

- 3.1 Molecules Containing Carbon 42
 - Carbon: The Central Atom 42
 - The Carbon Skeleton and Functional Groups 44
 - Common Organic Molecules 46
- 3.2 Carbohydrates 47
- 3.3 Proteins 48
- 3.4 Nucleic Acids 53
- 3.5 Lipids 56
 - True (Neutral) Fats 56
 - Phospholipids 58
 - Steroids 58

4 Cell Structure and Function 63

- 4.1 The Cell Theory 64
 - Different Cells; Different Organisms 66
- 4.2 Cell Membranes 66
- 4.3 Getting Through Membranes 69
 - Diffusion 69
 - Osmosis and Dialysis 70
 - Controlled Methods of Transporting Molecules 72
 - Signal Transduction 74
- 4.4 Cell Size 74

* These elements appear in every chapter.

- 4.5 Organelles Composed of Membranes 75
 - The Endoplasmic Reticulum 76
 - The Golgi Apparatus 77
 - Lysosomes 77
 - Peroxisomes 78
 - The Nuclear Membrane 78
 - Energy Converters 78
- 4.6 Nonmembranous Organelles 80
 - Ribosomes 80
 - Microtubules, Microfilaments, and Intermediate Filaments 80
 - Centrioles 81
 - Cilia and Flagella 82
 - Inclusions 82
- 4.7 Nuclear Components 83
- 4.8 Major Cell Types 84
 - The Prokaryotic Cell Structure 84
 - The Eukaryotic Cell Structure 86

5 Enzymes 91

- 5.1 How Cells Use Enzymes 92
- 5.2 How Enzymes Speed Chemical Reaction Rates 92
 - The Role of Enzyme Helpers 94
- 5.3 How the Environment Affects Enzyme Action 96
 - Temperature 96
 - pH 96
 - Enzyme-Substrate Concentration 97
- 5.4 Cellular-Controlling Processes and Enzymes 97
 - Gene Regulation 98
 - Negative Feedback 98
 - Inhibition 99

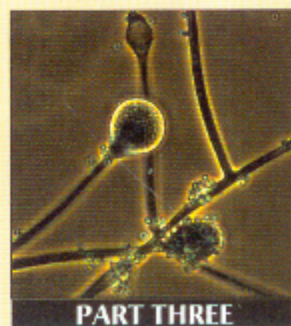

6 Biochemical Pathways 103

- 6.1 Energy and Organisms 104
- 6.2 Common Mechanisms Used in Processing Energy and Matter 104
 - Biochemical Pathways 104
 - Generating Energy in a Useful Form: ATP 106
 - Electron Transport 107
 - Proton Pump 108
- 6.3 Aerobic Cellular Respiration—An Overview 109
- 6.4 Aerobic Cellular Respiration 111
 - Fundamental Description 111
 - Detailed Description 112
- 6.5 Aerobic Cellular Respiration in Prokaryotes 117
- 6.6 Anaerobic Cellular Respiration 117

- 6.7 Metabolic Processing of Other Molecules 118
 - Fat Respiration 118
 - Protein Respiration 119
- 6.8 Photosynthesis—An Overview 120
- 6.9 Photosynthesis 122
 - Fundamental Description 122
 - Detailed Description 124
 - Glyceraldehyde-3-phosphate: The Product of Photosynthesis 126
- 6.10 Other Aspects of Plant Metabolism 128
- 6.11 Interrelationships between Autotrophs and Heterotrophs 129

7 DNA and RNA: The Molecular Basis of Heredity 133

- 7.1 The Central Dogma 134
- 7.2 Nucleic Acid Structure and Function 134
 - Transcription 136
 - Translation 139
- 7.3 Mutations 141
- 7.4 Controlling Gene Expression 144
 - Starting Transcription 144
 - The Right Amount at the Right Time 145
 - Splicing 145
- 7.5 Nucleotide Sequences—The Cell's Legacy 147
 - DNA Replication 147
 - DNA and Chromosomes 148
- 7.6 Using DNA to Our Advantage 150
 - Genetic Engineering and Biotechnology 150
 - Gene Therapy 154

Cell Division and Heredity 157

8 Mitosis: The Cell-Copying Process 157

- 8.1 The Importance of Cell Division 158
- 8.2 The Cell Cycle 158

- 8.3 The Stages of Mitosis 159
 - Prophase 159
 - Metaphase 159
 - Anaphase 160
 - Telophase 161
- 8.4 Plant and Animal Cell Differences 162
- 8.5 Differentiation 163
 - Stem Cells 163
- 8.6 Abnormal Cell Division 165
 - Chemotherapy—How It Works 165
 - Radiation—How It Works 166

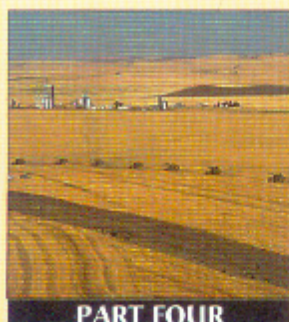

9 Meiosis:

Sex-Cell Formation 169

- 9.1 Sexual Reproduction and Meiosis 170
- 9.2 The Mechanics of Meiosis I 173
 - Prophase I 173
 - Metaphase I 173
 - Anaphase I 173
 - Telophase I 174
- 9.3 The Mechanics of Meiosis II 175
 - Prophase II 175
 - Metaphase II 175
 - Anaphase II 175
 - Telophase II 176
- 9.4 Sources of Variation 178
 - Mutation 178
 - Crossing-Over 178
 - Segregation 178
 - Independent Assortment 180
 - Fertilization 181
- 9.5 Nondisjunction and Chromosomal Abnormalities 182
- 9.6 Chromosomes and Sex Determination 186
- 9.7 A Comparison of Mitosis and Meiosis 187

10 Mendelian Genetics 189

- 10.1 Genetics, Meiosis, and Cells 190
- 10.2 Single-Gene Inheritance Patterns 190
 - Dominant and Recessive Alleles 191
 - Codominance 191
 - X-Linked Genes 193
- 10.3 Mendel's Laws of Heredity 194
- 10.4 Probability versus Possibility 195
- 10.5 Steps in Solving Heredity Problems: Single-Factor Crosses 196
- 10.6 The Double-Factor Cross 198
- 10.7 Alternative Inheritance Situations 199
 - Multiple Alleles 199
 - Polygenic Inheritance and Genetic Heterogeneity 200
 - Pleiotropy 200
- 10.8 Environmental Influences on Gene Expression 202

PART FOUR

Evolution and Ecology 205

11 Diversity Within Species 205

- 11.1 Populations and Species 206
- 11.2 The Species Problem 206
- 11.3 The Gene Pool Concept 208
- 11.4 Describing Genetic Diversity 210
- 11.5 Why Genetically Distinct Populations Exist 211
 - Adaptations to Local Environmental Conditions 211
 - Founder Effect 211
 - Genetic Bottleneck 212
 - Barriers to Movement 212
- 11.6 How Genetic Diversity Comes About 212
 - Mutations 212
 - Sexual Reproduction 212
 - Migration 212
 - The Importance of Population Size 213
- 11.7 Genetic Diversity in Domesticated Plants and Animals 214
 - Cloning 214
 - Selective Breeding 215
 - Genetic Engineering 215
 - The Impact of Monoculture 215
- 11.8 Human Population Genetics 216
- 11.9 Ethics and Human Population Genetics 217

12 Natural Selection and Evolution 221

- 12.1 The Concept of Evolution 222
- 12.2 The Role of Natural Selection in Evolution 222
- 12.3 What Influences Natural Selection? 222
 - Mechanisms that Affect Genetic Diversity 222

- The Role of Gene Expression 225
- The Importance of Excess Reproduction 226
- 12.4 Common Misunderstandings About Natural Selection 226
- 12.5 Processes that Drive Selection 227
 - Differential Survival 228
 - Differential Reproductive Rates 228
 - Differential Mate Choice—Sexual Selection 230
- 12.6 Patterns of Selection 230
- 12.7 Evolution Without Selection—Genetic Drift 231
- 12.8 Gene-Frequency Studies and Hardy-Weinberg Equilibrium 232
 - Determining Genotype Frequencies 232
 - Why Hardy-Weinberg Conditions Rarely Exist 233
 - Using the Hardy-Weinberg Concept to Show Allele-Frequency Change 234
- 12.9 A Summary of the Causes of Evolution Change 235

13 Speciation and Evolutionary Change 239

- 13.1 Species: A Working Definition 240
- 13.2 How New Species Originate 241
 - Speciation by Geographic Isolation 241
 - Speciation Without Geographic Barriers 243
 - Polyploidy: Instant Speciation 244
- 13.3 Maintaining Genetic Isolation Between Species 244
- 13.4 The Development of Evolutionary Thought 245
- 13.5 Evolutionary Patterns Above the Species Level 247
- 13.6 Rates of Evolution 251
- 13.7 The Tentative Nature of the Evolutionary History of Organisms 253
- 13.8 Human Evolution 253
 - The First Hominids—The Australopiths 255
 - Later Hominids—The Genus *Homo* 255
 - The Origin of *Homo sapiens* 255

14 Ecosystem Organization and Energy Flow 259

- 14.1 Ecology and Environment 260
- 14.2 The Organization of Ecological Systems 261
- 14.3 Characterizing Ecosystems: Energy, Numbers, Biomass 263
 - The Pyramid of Energy 263
 - The Pyramid of Numbers 265
 - The Pyramid of Biomass 265
- 14.4 Community Interactions 267
- 14.5 Types of Communities 270
 - Temperate Deciduous Forest 271
 - Grassland 271
 - Savanna 272
 - Desert 272
 - Boreal Coniferous Forest 272
 - Temperate Rainforest 273
 - Tundra 273
 - Tropical Rainforest 274
 - The Relationship Between Elevation and Climate 275
- 14.6 Succession 275
- 14.7 Human Use of Ecosystems 278
 - Converting Ecosystems to Human Use 278
 - The Energy Pyramid and Human Nutrition 279

15 Community Interactions 283

- 15.1 Community, Habitat, and Niche 284
- 15.2 Kinds of Organisms Interactions 284
 - Predation 284
 - Parasitism 286
 - Commensalism 288
 - Mutualism 288
 - Competition 289
- 15.3 The Cycling of Materials in Ecosystems 290
 - The Carbon Cycle 290
 - The Hydrologic Cycle 290
 - The Nitrogen Cycle 291
 - The Phosphorus Cycle 293
- 15.4 The Impact of Human Actions on Communities 295
 - Introduced Species 295
 - Predator Control 295
 - Habitat Destruction 296
 - Pesticide Use 296
 - Biomagnification 297

16 Population Ecology 303

- 16.1 Population Characteristics 304
- 16.2 Reproductive Capacity 306
- 16.3 The Population Growth Curve 307
- 16.4 Population-Size Limitations 308
- 16.5 Categories of Limiting Factors 309
 - Extrinsic and Intrinsic Limiting Factors 311
 - Density-Dependent and Density-Independent Factors 311
- 16.6 Limiting Factors to Population Growth 312
 - Available Raw Materials 313
 - Availability of Energy 314
 - Production of Wastes 314
 - Interactions with Other Organisms 314
 - Control of Human Population Is a Social Problem 314

17 Evolutionary and Ecological Aspects of Behavior 319

- 17.1 The Adaptive Nature of Behavior 320
- 17.2 Interpreting Behavior 320
- 17.3 The Problem of Anthropomorphism 321
- 17.4 Instinct and Learning 322
 - Instinctive Behavior 322
 - Learned Behavior 323
- 17.5 Kinds of Learning 324
 - Habituation 324
 - Association 324
 - Exploratory Learning 325
 - Imprinting 325
 - Insight 325
- 17.6 Instinct and Learning in the Same Animal 328
- 17.7 What About Human Behavior? 329
- 17.8 Selected Topics in Behavioral Ecology 330
 - Reproductive Behavior 330
 - Territorial Behavior 332
 - Dominance Hierarchy 333
 - Avoiding Periods of Scarcity 333
 - Navigation and Migration 334
 - Biological Clocks 335
 - Social Behavior 335

Physiological Processes 339

18 Materials Exchange in the Body 339

- 18.1 Exchanging Materials: Basic Principles 340
 - Homeostasis 340
 - Limitations to Cell Size 340
- 18.2 Circulation 342
 - The Nature of Blood 342
 - The Immune System 343
 - The Heart 344
 - Arteries and Veins 345
 - Capillaries 347
- 18.3 Gas Exchange 348
 - Respiratory Anatomy 349
 - Breathing System Regulation 349
 - Lung Function 350
- 18.4 Obtaining Nutrients 352
 - Mechanical and Chemical Processing 352
 - Nutrient Uptake 355
 - Chemical Alteration: The Role of the Liver 356
- 18.5 Waste Disposal 357
 - Kidney Structure 357
 - Kidney Function 357

19 Nutrition: Food and Diet 363

- 19.1 Living Things as Chemical Factories: Matter and Energy Manipulators 364
- 19.2 Kilocalories, Basal Metabolism, and Weight Control 364
- 19.3 The Chemical Composition of Your Diet 367
 - Carbohydrates 367
 - Lipids 369
 - Proteins 369

- Vitamins 370
- Minerals 370
- Water 373
- 19.4 Amounts and Sources of Nutrients 373
- 19.5 The Food Guide Pyramid with Five Food Groups 373
 - Grain Products Group 374
 - Fruits Group 374
 - Vegetables Group 376
 - Dairy Products Group 376
 - Meat, Poultry, Fish, and Dry Beans Group 376
- 19.6 Eating Disorders 376
 - Obesity 376
 - Bulimia 378
 - Anorexia Nervosa 378
- 19.7 Deficiency Diseases 379
- 19.8 Nutrition Through the Life Cycle 380
 - Infancy 380
 - Childhood 380
 - Adolescence 381
 - Adulthood 381
 - Nutritional Needs Associated with Pregnancy and Lactation 382
 - Old Age 382
- 19.9 Nutrition for Fitness and Sports 382

20 The Body's Control Mechanisms 387

- 20.1 Coordination in Multicellular Animals 388
- 20.2 Nervous System Function 389
 - The Structure of the Nervous System 389
 - The Nature of the Nerve Impulse 389
 - Activities at the Synapse 391
 - The Organization of the Central Nervous System 392
- 20.3 Endocrine System Function 393
 - Negative Feedback Control 395
- 20.4 Integration of Nervous and Endocrine Function 395
- 20.5 Sensory Input 399
 - Chemical Detection 399
 - Vision 400
 - Hearing and Balance 401
 - Touch 402
- 20.6 Output Coordination 403
 - Muscular Contraction 403
 - Types of Muscle 403
 - Activities of Glands 406
 - Growth Responses 407

21 Human Reproduction, Sex, and Sexuality 411

- 21.1 Sexuality from Different Points of View 412
- 21.2 Chromosomal Determination of Sex 412
- 21.3 Male and Female Fetal Development 413
- 21.4 Sexual Maturation of Young Adults 415
 - The Maturation of Females 415
 - The Maturation of Males 417
- 21.5 Spermatogenesis 417
- 21.6 Oogenesis 420
- 21.7 Hormonal Control of Fertility 422
- 21.8 Fertilization and Pregnancy 422
 - Twins 425
 - Birth 425
- 21.9 Contraception 426
- 21.10 Abortion 429
- 21.11 Changes in Sexual Function with Age 432

The Origin and Classification of Life 435

22 The Origin of Life and Evolution of Cells 435

- 22.1 Spontaneous Generation Versus Biogenesis 436
- 22.2 Current Thinking About the Origin of Life 436
 - Extraterrestrial Origin for Life on Earth 437
 - Earth Origin for Life on Earth 438

- 22.3 The "Big Bang" and the Origin of the Earth 438
- 22.4 Steps Needed to Produce Life from Inorganic Materials 440
 - Formation of the First Organic Molecules 440
 - Formation of Macromolecules 441
 - The Origin of Genetic Material 442
 - Isolating Organic Molecules 442
 - Toward the Central Dogma 443
 - Meeting Metabolic Needs—Heterotrophs or Autotrophs 444
- 22.5 Major Evolutionary Changes in the Nature of Living Things 444
 - The Development of an Oxidizing Atmosphere 445
 - The Establishment of Three Major Domains of Life 445
 - The Origin of Eukaryotic Cells 446
- 22.6 Evolutionary Time Line 448

23 The Classification and Evolution of Organisms 455

- 23.1 The Classification of Organisms 456
 - Taxonomy 456
 - Phylogeny 460
- 23.2 Domains Eubacteria and Archaea 462
 - Eubacteria 462
 - Archaea 465
- 23.3 Domain Eucarya 465
 - Kingdom Protista 465
 - Kingdom Fungi 466
 - Kingdom Plantae 466
 - Kingdom Animalia 466
- 23.4 Acellular Infectious Particles 467
 - Viruses 467
 - Viroids: Infectious RNA 471
 - Prions: Infectious Proteins 471

24 Microorganisms: Bacteria, Protista, and Fungi 475

- 24.1 Microorganisms 476
- 24.2 Bacteria 476

- 24.3 Kingdom Protista 481
 - Plantlike Protists 482
 - Animal-like Protists 483
 - Funguslike Protists 485
- 24.4 Multicellularity in the Protista 486
- 24.5 Kingdom Fungi 487
 - Lichens 490

25 Plantae 493

- 25.1 What Is a Plant? 494
- 25.2 Alternation of Generations 494
- 25.3 Ancestral Plants: The Bryophytes 496
- 25.4 Adaptations to Land 496
 - Vascular Tissue: What It Takes to Live on Land 496
 - Roots 498
 - Stems 498
 - Leaves 499
- 25.5 Transitional Plants: Non-Seed-Producing Vascular Plants 500
- 25.6 Advanced Plants: Seed-Producing Vascular Plants 501
 - Gymnosperms 501
 - Angiosperms 504
- 25.7 Response to the Environment—Tropisms 508

26 Animalia 513

- 26.1 What Is an Animal? 514
- 26.2 Temperature Regulation 516
- 26.3 Body Plans 516
- 26.4 Skeletons 518
- 26.5 Animal Evolution 519
- 26.6 Primitive Marine Animals 520
- 26.7 A Parasitic Way of Life 522
- 26.8 Advanced Benthic Marine Animals 525
- 26.9 Pelagic Marine Animals: Fish 528
- 26.10 The Movement to Land 529

- Appendix 1 The Metric System 539
- Appendix 2 Acronyms 541
- Glossary 542
- Credits 560
- Index 562
