Preface	xv
----------------	----

List of abbreviations	xviii
List of notations	xix

Introduction: Evolutionary Systems and Development Modeling	1
--	----------

1 Evolutionary Systems (ES)	1
1.1 Artificial ES	1
1.2 Natural ES	4
1.3 Joined ES	6
2 Generalized Structure of ES	7
3 Generalized Structure of Two ES Interactions	8
4 Generalized Structure of CAO	10
5 On Development Modeling	12
5.1 Base simplest MM of development	12
5.2 Comparison with classical MM	14
5.3 A history, in short	16

Part 1: SURVEY OF MM OF CAO	17
------------------------------------	-----------

Chapter 1: General Methods of Inlet and Analysis of MM	19
---	-----------

1 Methods of Simplification of the Systems of Kinetic Equations	19
2 On the Qualitative Theory for the Systems of the Second Order	21
2.1 MM of cell cycles, I	24
2.2 MM of hyper-cycle	27
2.3 MM of cell excitable membranes	28
3 MM of Spatial Systems	30

3.1 MM of tumor angiogenesis	33
3.2 Mechanical models for mesenchymal morphogenesis	35
4 Possibility for Description of Biological Events on Molecular Level	36
4.1 MM of traffic through cell membranes	39
4.1.1 Passive transport	39
4.1.2 Active transport	40
4.2 On the problem of structure and protein folding	41
4.3 Simple kinetic MM in protein folding	42
4.3.1 Theories of reaction rates	42
4.3.2 Application to the protein folding without barriers	43
4.4 Physical model of DNA	44
Chapter 2: MM of Enzyme Reactions	47
1 Method of Graphs	47
2 MM of Open Reactions with Substratum Inhibition	49
3 MM of Two-Substratum Reactions with Inhibition	50
4 On Multi-enzyme Systems	52
4.1 General notions	52
4.2 Simple MM of energetic metabolism	53
5 Effects of pH and T on the Reaction Rates	56
6 MM of Cell-to-Cell Interactions	58
Chapter 3: MM of Kinetic Cellular Theory	61
1 Assumption 1	61
2 Assumption 2	61
3 Assumption 3	61
4 Assumption 4	63
5 Assumption 5	63
6 Assumption 6	63
7 Assumption 7	64
8 Assumption 8	66
9 Assumption 9	66
10 Assumption 10	67
11 Assumption 11	67

12 On Generalized Kinetic Models in Applied Sciences 68

Chapter 4: Some Other MM 69

1 Delay Differential Equations 69
2 Mathematics in Population Biology 69
3 Some Problems and MM in Computational Biology and Bioinformatics 72
4 On the Theory Catastrophes 75
5 On the Respective Software 78

Part 2: MM OF DEVELOPMENT 79

Chapter 5: Base MM 81

1 Base Minimal MM 81
2 More General MM 85
3 Additional MM 88
4 On Comparison with Well-Known MM 89
5 Methods for Estimation of MM Input Data 89
6 On the Problem of MM Completeness 91

6.1 Methods of CAO de- and aggregation 92
6.2 Detailing the CAO structure 92

6.2.1 Case of self-development of the indices α - and β -types 92
6.2.2 Case of the additional “executive” subsystem (E) 94
6.2.3 Case of the additional “recreation” subsystem (R) 95
6.2.4 Further factorization of the indices α - and β -types 96
6.2.5 On introduction of dimensionless relations 96

6.3 On using extreme concepts 96

7 Statement of the Modeling Problems 98

Chapter 6: Examples of CAO and Their MM 101

1 On Hyper-Cycle, Origin of Life and DNA Code 101
2 Dehydration Synthesis and Hydrolysis 103
3 ATP Synthesis 104
4 Biosynthesis 109
5 On Pattern Formation 111
6 MM of Regulatory Processes in Cells 113

6.1 Biological background	113
6.1.1 Proteins turn genes on or off	113
6.1.2 Differentiated cells has a particular pattern of genes	114
6.1.3 Complex protein control transcription	116
6.1.4 RNA adds a cap and poly-A tail and removes non-coding segments	116
6.1.5 Multiple mechanisms control gene expression	117
6.1.6 Gene expression and cell-to-cell signaling	119
6.1.7 Signal-transduction pathways	119
6.2 MM of turning genes on or off	120
6.3 MM of DNA transcription and mRNA translation	122
6.4 MM of signal-transduction pathways	122
6.5 MM of molecular pumps	123
 Chapter 7: MM of the Cell	125
1 On Cell Biology	125
1.1 Molecular constituents of cells	125
1.2 Structure and functions of cells	127
1.3 On cell metabolism.....	131
1.4 On control of gene expression	132
1.5 Summing up	133
2 Base MM of a Cell	134
2.1 MM of cell structure and functions	135
2.2 MM of a cell with regard to its given spatial structure	136
2.3 MM of developing cell	137
2.4 MM of cell bio-field	139
3 On the Protein Folding Problem	140
4 MM of Cell Cycle, II	142
4.1 Biological background	142
4.2 The respective MM	145
5 MM of Morphogenesis	146
5.1 Biological background	146
5.2 The respective MM	149

Chapter 8: MM of the Immune Network 151

1 Introduction 151

2 Cells of the Immune System 152

 2.1 On the immune system 152

 2.2 Properties of the immune network cells 154

3 Continuous MM 157

4 On the Classical and the New Approach 163

5 Some Results of Investigation 166

6 Conclusion 167

Chapter 9: MM of Some Other CAO 169

1 Function of Special Cells 169

2 MM of Stem Cells 170

3 MM of Thymus and Spleen 172

4 MM of the Immune and Blood System Cells 173

5 MM of Endothelial Cells 175

6 Conclusion 175

Part 3: INTRODUCTION TO APPLICATIONS 177

Chapter 10: AIDS 179

1 Introduction 179

2 Immune Status of an Organism 179

3 Viruses 181

 3.1 Main properties of viruses 181

 3.2 On retroviruses and HIV 181

 3.3 Pattern of HIV infection 183

4 MM of Viruses 183

 4.1 Base MM 183

 4.2 MM of HIV 184

 4.3 Qualitative investigation of MM of HIV 185

 4.4 More complicated MM of HIV and its qualitative investigation 188

 4.5 MM of HIV population 189

4.5.1 MM of HIV population inside of the host cell	189
4.5.2 MM of HIV free population	190
5 MM of AIDS	192
5.1 Qualitative investigation of MM of AIDS	196
5.2 On AIDS immune therapy	198
6 Conclusion	200
Chapter 11: Cancers	201
1 On Study of a Cancer at the Molecular Level	201
2 MM of a Cancer Cell	203
2.1 Base MM of a cell at the start of proliferation	203
2.2 More complicated MM	204
2.3 MM of developing daughter cell	206
2.4 MM of a cancer cell bio-field	207
3 Qualitative Investigation of MM of a Cancer Cell	208
3.1 Investigation of MM (1)-(5)	208
3.2 Investigation of MM (6)-(8)	210
3.3 Investigation of MM (9), (10)	212
4 MM of a Cancer	213
5 Base MM of interaction of a cancer with host organism	216
6 Qualitative investigation of MM of a cancer	217
6.1 Investigation of MM (37)-(43)	217
6.2 Investigation of MM (44), (45)	221
7 On Immune Therapy of Cancers	224
8 On Gene Therapy of Cancers	225
9 Conclusion	227
Chapter 12: On Life Longevity Problems	229
1 Clock of Cellular Aging	229
1.1 Error accumulation theory	229
1.2 Programmed dearth theory	229

1.3 Winding back the clock	230
2 Modeling of Cell Longevity Problems	231
2.1 Modeling of error accumulation	231
2.2 Modeling of programmed death	232
2.3 Modeling of winding back the clock	233
3 On Modeling of Organism Longevity Problems	234
4 Certain Perspectives	235
Chapter 13: On MM of a Disease	237
1 Introduction	237
2 Conception of the Norm and Pathology.....	238
3 Norm Restoration Problems	239
4 On Optimization Problems	240
5 On the Problems of Individualization of MM.....	241
6 On MM of Doctor's Business	242
Appendix: MATHEMATICS OF DEVELOPMENT	245
Chapter 14: Investigation of Equations	247
1 Examples of Analytic Solutions	247
2 Existence and Uniqueness of Solutions	249
3 Cases of Non-Uniqueness of Solutions	259
4 On Stability of Solutions	260
5 Cases of Oscillating, Wave, and Some Other Solutions	262
6 Asymptotic Properties of Solutions	266
7 Some Additions and Remarks	267
Chapter 15: Investigation of Optimization Problems	269
1 Preliminary Concepts and Results	269
2 Examples of Analytical Solutions	274
3 Existence and Uniqueness of Solutions	276
4 On Stability of Solutions	280
5 On Investigation of Solution Structure	283
6 Case of Non-Uniqueness of Solutions.....	286
7 Asymptotic Properties of Solutions	288
8 Additions and Remarks	290

Chapter 16: Numerical Methods and Software	293
1 On the Solution with the Pre-Assigned Accuracy	293
1.1 Second kind of Volterra equations	293
1.1.1 Inherent errors	293
1.1.2 Method errors	297
1.1.3 Round-off errors	302
1.1.4 Analysis of the total errors	303
1.2 First kind of Volterra equations	304
1.2.1 Two main approaches	304
1.2.2 Quasi-solution method	305
1.2.3 Estimate of continuity modules for reciprocal operators	306
1.2.4 On regularization for linear equations	307
2 Reduction to Volterra-Type Equations	309
2.1 Mathematical programming problems	309
2.2 Some other problems	312
3 On Optimal Numerical Methods	313
3.1 Approximation of functions	313
3.2 On the solution of other applied problems	314
4 On Algorithms and Software	317
Summary	319
Bibliography	321
Index	329
About the Authors	333
