About the Editor and Authors.....	xi
Preface.....	xiii
1 What Do the Folds in Proteins Look Like?-- <i>Jane S. Richardson</i>	1
Antiparallel Alpha Proteins	5
Parallel Alpha/Beta Proteins	7
Antiparallel Beta Proteins	13
Small Irregular Proteins	21
Discussion	23
References	26
2 Modular Processes and Natural Selection for Rapid Folding-- <i>Donald B. Wetlaufer</i>	29
References	44
3 Hierarchical Structure and Assembly of Type I Collagen-- <i>Karl A. Piez</i>	47
Primary Structure	47
Secondary Structure	49
Tertiary Structure	49
Quaternary Structure	53
Conclusions	60
References	60
Editor's Addendum	62
Editor's References	62
4 Stability and Dynamics of Globular Proteins-- <i>Irwin D. Kuntz, Jr.</i>	65
Introduction	65

Stability of Proteins	65
<i>Molecular Architecture, 65; Protein Thermodynamics, 67; A Model for Protein Thermodynamics, 69</i>	
Motions in Proteins	72
<i>Fast Motions, 72; Sidechain Motions, 73</i>	
<i>Motion of Small Molecules Within Proteins: Proton Exchange, 74; Protein Folding Kinetics, 75</i>	
Acknowledgements	78
References	78
5 On the Folding and Insertion of Globular Membrane Proteins--Donald Max Engelman, Thomas A. Steitz.....	87
Introduction	87
The Helical Hairpin Hypothesis	88
Hydrogen Bonding Energies Imply Helical Structures	89
Formation of the Helical Hairpin	91
Hydrophobic Interactions Favor the Partitioning of Helices into Membranes	93
Identification of Membrane-Spanning Helical Regions from the Amino Acid Sequence	97
Polar Interactions and Packing Effects May Stabilize Helix Associations	108
A Possible Pathway for Insertion and Folding	111
References	112
6 Use of Temperature Sensitive Mutants to Dissect Pathways of Protein Folding and Subunit Interaction--Donna H. Smith, David P. Goldenberg, Jonathan King.....	115
Introduction	115
<i>A Genetic Approach, 118; Properties of the Tail Spike Endorhamnosidase of P22, 119; Temperature Sensitive Mutations in Gene 9, 123; What is the Nature of the Defect in Temperature Sensitive Mutants?, 123; Properties of Mature ts Mutant Tailspike Synthesized at Permissive Temperature, 126; The State of the ts Mutant Polypeptide Chains Synthesized at 40°, 127; Do the ts</i>	

	<i>Polypeptide Chains Synthesized at 40° React with Antibody?, 130; Are the ts Mutant Polypeptide Chains Related to Intermediates in Protein Folding?, 131; Identification of a Metastable Folding Intermediate in the Wild Type Pathway, 137; Are the ts Mutants Blocked Before or After the Protrimer?, 139</i>	
	Conclusions	139
	<i>The Pathway of Folding and Subunit Assembly of the Wild Type Tail Spike, 139; The Nature of the Temperature Sensitive Mutations, 141</i>	
	References	142
7	Exons and Domains in Relation to Protein Folding-- <i>Sherman Beychok</i>	145
	Introduction	145
	Effect of Heme Binding on Globin Chain Conformation	146
	Gene Structure: Protein Function Correlation in Hemoglobin	151
	<i>The Central Exon Product, 151</i>	
	Comparison of the Heme Binding Site of α^h and β^h with those of Cytochrome b_5 , Cytochrome b_2 and Two Probable Sites in Mito- chondrial Cytochrome b	161
	Kinetics of Heme-Induced Refolding of α -Globin	167
	Concluding Comments on Further Aspects of the Domain-Like Central Fragment	170
	Acknowledgements	172
	References	172
8	Principles and Problems of Biological Growth-- <i>H. R. Crane</i>	175
	Some Properties of Chains	179
	<i>The Simplest Kind, 179; Non-Self-Starting Chains, 183; Periodic Breaking, 185; The Form of Chains, 189; Results of Combining Some of the Principles Discussed, 193</i>	
	Specificity or Selectivity	195
	<i>Physical and Chemical Basis, 195; Quantitative Requirements, 198; We Take a Suggestion from the Modern Factory, 199</i>
