PREFACE	ix

Introductory Review

J. D. PYE

Introduction	1
The programme	1
The mammalian auditory system	3
Variation	5
The human subject	6
Technical developments	7
Interdependence of techniques	8

DEVELOPMENTAL ASPECTS

Chairman: L. Fisch

Morphological and Functional Changes in the Cochlea Associated with the Inception of Hearing

S. K. BOSHER

Synopsis	11
Introduction	11
Central auditory pathways	12
Organ of Corti	13
Endolymph system	16
Survey of normal development	19
Abnormal development	19
Human cochlear development	20
Conclusion	21
Acknowledgements	21
References	21

On the Measurement of Human Foetal Auditory Response

R. J. BENCH and D. L. MENTZ

Synopsis	23
Introduction	23
Early work	23
Techniques	24
Depression of the foetal nervous system	25

Controls	25
Recent work	28
The present study	28
Method	30
Subjects	30
Stimuli	30
Procedure	30
Results	31
Discussion	36
Acknowledgements	38
References	38

MIDDLE EAR

Chairman: R. Hinchcliffe

Examination of Normal and Abnormal Middle Ear Function

D. BROOKS

Synopsis	41
Middle ear function	41
Methods of examination of middle ear function	43
Practical applications	47
Conclusion	50
References	50

The Stapedius Muscle and Speech Perception

E. BORG and J.-E. ZAKRISSON

Synopsis	51
Introduction	51
Material	52
Methods	53
Impedance change measurement	53
Electromyography	53
Vocalization	53
Discrimination score	54
Measurement of masking	54
Results	55
Stapedius muscle activity during vocalization	55
Stapedius muscle activity when listening to speech	57
Discrimination score	58
Speech intelligibility in noise	60
Masking produced by low frequency noise	61
Discussion	63
Mechanisms for stapedius muscle activation during vocalization	63
Mechanisms for the influence of the stapedius muscle on speech sound intelligibility	64
The role of centrifugal control of middle ear sound transmission during vocalization	65

Summary	66
Acknowledgements	66
References	67

Peripheral Aspects of the Physiology of Middle Ear Muscles

S. D. ANDERSON

Synopsis	69
Introduction	69
Methods	70
Silver impregnation	70
Histochemistry	71
Classification of fibres	72
Results	78
Silver impregnation	78
Histochemical techniques	78
Discussion	88
Acknowledgements	92
References	92

COCHLEAR TRAUMA

Chairman: R. Hinchcliffe

Comparison of Histological Changes in the Cochlea of the Guinea-pig and the Bat *Rousettus* after Acoustic Trauma

ADE PYE

Synopsis	97
Introduction	97
Material	98
Methods	98
Apparatus	98
Procedure	99
Assessment of damage	99
Results	99
General	99
<i>Cavia</i>	100*
<i>Rousettus</i>	100
Discussion	103
Conclusions and summary	104
Acknowledgements	104
References	104

Relationships Between Noise-induced Threshold Shifts, Morphological Change and Social Handicap

R. R. A. COLES

Synopsis	107
Temporary and permanent threshold shifts	107
Growth and recovery of threshold shifts	108
Applications of TTS data	108
The energy principle	111

Morphological change and auditory impairment	113
Functional impairment and social handicap	115
Conclusions	118
References	119

The Pathology of Deafness Due to Trauma

L. MICHAELS

Synopsis	121
Fractures involving the cochlea	121
Microscopic cochlear damage in head injury	123
Blast and gunshot injury	126
Sound wave injury	126
Cytopathology of hair cells in conditions of "stimulation" deafness	127
Ototoxic injury to cochlea	127
Conclusions	131
References	132

EIGHTH NERVE

Chairman: H. A. Beagley

Normal and Abnormal Functioning of the Cochlear Nerve

E. F. EVANS

Synopsis	133
Introduction	133
Frequency selectivity in the normal cochlea	135
Frequency selectivity of the cochlear nerve to pure tone stimuli	135
Frequency selectivity of the cochlear nerve to broad-band stimuli	137
Frequency selectivity of the cochlear nerve and cochlear partition	139
Frequency selectivity in the abnormal cochlea	141
Abnormal conditions having long-term effects	141
Abnormal conditions having short-term reversible effects	144
Implications for normal hearing and cochlear deafness	150
Cochlear filtering	150
Auditory frequency selectivity in man	151
Recruitment	153
The origin of the second cochlear filtering process	155
Acknowledgements	160
References	161

Gross Responses From the Cochlear Nerve in Man and in the Guinea-pig

S. D. G. STEPHENS,

R. CHARLET de SAUVAGE and J.-M. ARAN

Synopsis	167
Introduction and review	167

Material and method	171
Equipment	171
Human study	173
Guinea-pig study	173
Stimuli	174
Response analysis	174
Results	175
Human study	175
Guinea-pig studies	180
Discussion	183
Acknowledgements	184
References	185

CENTRAL NERVOUS SYSTEM

Chairman: H. A. Beagley

Auditory Evoked Responses in Small Mammals

GILLIAN D. SALES

Synopsis	187
Introduction	187
Evoked responses recorded intracranially	189
Evoked responses recorded extracranially	192
Discussion	199
Summary	200
Acknowledgements	201
References	201

Automatic Evaluation of Human Auditory Evoked Potentials From the Vertex

G. SALOMON

Synopsis	205
Development of a reliable method of automatic evaluation of vertex potentials for clinical and experimental use	205
Introduction	205
Experiments with parametric statistics	205
Experiments with non-parametric tests	207
The final elaboration of the automatic test	212
Summary	216
Evaluation of clinical reliability of the rank correlation test	217
Introduction	217
Material and method	217
Results	218
Summary	223

Studies of physiological parameters in sound-evoked vertex potentials	223
Introduction	223
Method	224
Results	226
Summary	232
Acknowledgement	233
References	233
Invited discussion (Sayers, Salomon)	234

BEHAVIOURAL METHODS OF THRESHOLD MEASUREMENT

Chairman: A. Tumarkin

Behavioural Audiometry in Mammals: Review and Evaluation of Techniques

R. L. FRANCIS

Synopsis	237
Introduction	237
Description of techniques	240
Procedures with unconditioned responses	240
Procedures with conditioned responses	244
Historical trends	257
Evaluation of techniques	258
Procedures with unconditioned responses	262
Procedures with conditioned responses	266
Conclusion	272
Technique for small mammals	273
Summary	275
Acknowledgements	275
References	275
Appendix	283

The Auditory Response Cradle: A Device for the Objective Assessment of Auditory State in the Neonate

M. J. BENNETT

Synopsis	291
Introduction	291
The selection of response measures	293
The choice between a single or a multi-parameter approach	293
The need to assess arousal state	293
The chosen response measures	294
The design of the auditory response cradle	295
The main components	295
The instrumentation	298
Evaluation of the auditory response cradle	301
Acknowledgements	303
References	304

Studies of physiological parameters in sound-evoked vertex potentials	223
Introduction	223
Method	224
Results	226
Summary	232
Acknowledgement	233
References	233
Invited discussion (Sayers, Salomon)	234

BEHAVIOURAL METHODS OF THRESHOLD MEASUREMENT

Chairman: A. Tumarkin

Behavioural Audiometry in Mammals: Review and Evaluation of Techniques

R. L. FRANCIS

Synopsis	237
Introduction	237
Description of techniques	240
Procedures with unconditioned responses	240
Procedures with conditioned responses	244
Historical trends	257
Evaluation of techniques	258
Procedures with unconditioned responses	262
Procedures with conditioned responses	266
Conclusion	272
Technique for small mammals	273
Summary	275
Acknowledgements	275
References	275
Appendix	283

The Auditory Response Cradle: A Device for the Objective Assessment of Auditory State in the Neonate

M. J. BENNETT

Synopsis	291
Introduction	291
The selection of response measures	293
The choice between a single or a multi-parameter approach	293
The need to assess arousal state	293
The chosen response measures	294
The design of the auditory response cradle	295
The main components	295
The instrumentation	298
Evaluation of the auditory response cradle	301
Acknowledgements	303
References	304

Operant Audiometry with Children

I. ST JAMES-ROBERTS

Synopsis	307
Introduction	307
Operant methods	308
Biofeedback and operant research findings	308
Characterization of operant audiometric tests	310
Differences between operant audiometric tests	311
References	314

BIOLOGICAL SIGNIFICANCE OF HEARING

Chairman: A. Tumarkin

Sound Communication in Rodents

JANE C. SMITH

Synopsis	317
Introduction	317
Preliminary experiments	318
The sounds of infant <i>P. maniculatus</i>	321
Sound reply experiments on <i>P. maniculatus</i>	324
Experiments using "real" sounds	324
Experiments using synthesized sounds	325
Experiments with mice	326
Conclusion	328
Summary	328
Acknowledgements	329
References	329

Maternal Recognition of Infant Sounds

V. VUORENKOSKI

Synopsis	331
Introduction—different functions of the infant sound	331
Cry sound and "let-down"	332
Individual cry characteristics	332
Recognition of states	333
Real time instrumental identification of infant sounds	336
References	337

Closing Remarks to Symposium

J. D. PYE	339
AUTHOR INDEX	341
TAXONOMIC INDEX	351
SUBJECT INDEX	353
