

CONTENTS

Preface	VII
Chapter 1, Background	I
1.1. The material basis	1
1.1.1. Self-reproduction	1
1.1.2. DNA, RNA	1
1.1.3. Replication	2
1.1.4. Transcription	5
1.1.5. Mutation	7
1.1.6. Gene, cistron, operon, factor, allele	8
1.2. The organization of DNA, Chromosomes	9
1.2.1. Viruses and bacteria	9
1.2.2. Fungi and yeasts	13
1.2.3. Higher organisms, Histones, Chromatin	15
1.2.4. Heterochromatin	16
1.2.5. Replicons	17
1.2.6. SEMI-conservative replication	18
1.2.7. Number of strands per chromosome	20
1.2.8. Repetitive DNA sequences	21
1.3. The division of the nucleus of higher organisms	22
1.3.1. Mitosis, karyokinesis	22
1.3.2. Duration of mitosis	27
1.4. Factors affecting nuclear division and chromosome morphology, number and structure	29
1.4.1. Alterations in the course of mitosis	29
1.4.2. Colchicine	31
1.4.3. Polyploidy and polysomy	33
1.4.4. Terminology of chromosome-number variants	34
1.4.5. Chromosome-structural aberrations	36
1.4.6. Ionizing radiations	36
1.4.7. Radiomimetic substance	41
1.4.8. Primary lesion, Types of aberrations	42
1.4.9. Dose-effect curves	47
1.4.10. Duration of treatment, Dose fractionation	48
1.4.11. Chromosome-structural variants	49

2.9.7. Ionizing radiation	129
2.9.8. Chemicals	129
2.9.9. Variation within the organism	130
2.9.10. Genetic factors	130
2.9.11. Shifts in populations	132
2.10. Uniformity and variation	133
2.10.1. The one-dimensional structure of the chromosome	133
2.10.2. Three moments of central importance	133
Chapter 3, Specialized chromosomes	135
3.1. Adaptational forms of normal chromosomes	135
3.1.1. Polytene giant chromosomes	135
3.1.2. Lampbrush chromosomes	140
3.2. Permanently specialized chromosomes	143
3.2.1. Sex chromosomes. Genetic sex determination	143
3.2.2. X-chromosome heterochromatinization. Sex chromatin. Barr-body. Drumsticks	149
3.2.3. Hemizygosity	151
3.2.4. Deviating segregations of genes in sex chromosomes	152
3.2.5. X-chromosome mutations	153
3.2.6. Nucleolar chromosomes	155
3.2.7. B-chromosomes	159
3.2.8. Holokinetic chromosomes	162
Chapter 4, Chromosome structural variants	165
4.1. Introduction	165
4.2. Deficiencies	165
4.2.1. Types	165
4.2.2. Phenotypic effect	166
4.2.3. Chromosome pairing. Recombination. Genetic consequences	168
4.3. Duplications	170
4.3.1. Types	170
4.3.2. Phenotypic effect	170
4.3.3. Chromosome pairing. Recombination. Secondary variants	173
4.4. Inversions	174
4.4.1. Types	174
4.4.2. Phenotypic effect. Position effect	174
4.4.3. Chromosome pairing	177
4.4.4. Recombination. Consequences of exchange	177
4.4.5. Transmission	181
4.4.6. Inversions in natural populations	183
4.5. Translocations	185
4.5.1. Types	185
4.5.2. Phenotypic effect	186
4.5.3. Chromosome pairing. Exchange. Configurations	187

2.9.7. Ionizing radiation	129
2.9.8. Chemicals	129
2.9.9. Variation within the organism	130
2.9.10. Genetic factors	130
2.9.11. Shifts in populations	132
2.10. Uniformity and variation	133
2.10.1. The one-dimensional structure of the chromosome	133
2.10.2. Three moments of central importance	133
Chapter 3, Specialized chromosomes	135
3.1. Adaptational forms of normal chromosomes	135
3.1.1. Polytene giant chromosomes	135
3.1.2. Lampbrush chromosomes	140
3.2. Permanently specialized chromosomes	143
3.2.1. Sex chromosomes. Genetic sex determination	143
3.2.2. X-chromosome heterochromatinization. Sex chromatin. Barr-body. Drumsticks	149
3.2.3. Hemizygosity	151
3.2.4. Deviating segregations of genes in sex chromosomes	152
3.2.5. X-chromosome mutations	153
3.2.6. Nucleolar chromosomes	155
3.2.7. B-chromosomes	159
3.2.8. Holokinetic chromosomes	162
Chapter 4, Chromosome structural variants	165
4.1. Introduction	165
4.2. Deletions	165
4.2.1. Types	165
4.2.2. Phenotypic effect	166
4.2.3. Chromosome pairing. Recombination. Genetic consequences	168
4.3. Duplications	170
4.3.1. Types	170
4.3.2. Phenotypic effect	170
4.3.3. Chromosome pairing. Recombination. Secondary variants	173
4.4. Inversions	174
4.4.1. Types	174
4.4.2. Phenotypic effect. Position effect	174
4.4.3. Chromosome pairing	177
4.4.4. Recombination. Consequences of exchange	177
4.4.5. Transmission	181
4.4.6. Inversions in natural populations	183
4.5. Translocations	185
4.5.1. Types	185
4.5.2. Phenotypic effect	186
4.5.3. Chromosome pairing. Exchange. Configurations	187

4.5.4. Two and more translocations	193
4.5.5. Orientation	195
4.5.6. Semisterility	199
4.5.7. Translocations in man	201
4.5.8. Genetic consequences of translocations	203
4.5.9. Translocations in natural populations	207
4.5.10. Interchromosome effects. Position effect	212
Chapter 5. Numerical variants	213
Aneuploidy	213
5.1. Primary trisomies	213
5.1.1. Origin and phenotypic effects	213
5.1.2. Chromosome pairing. Crossing-over	218
5.1.3. Orientation. Centromere mis-division	221
5.1.4. Transmission	223
5.1.5. Genetic segregations	224
5.1.6. Double reduction	226
5.2. Derived types	228
5.2.1. Secondary trisomies	228
5.2.2. Telocentric trisomies	230
5.3. Tertiary and interchange trisomies	233
5.3.1. Types and origin	233
5.3.2. Chromosome pairing	234
5.3.3. Transmission. Genetic consequences	235
Euploidy	236
5.4. Haploids	236
5.4.1. Origin	236
5.4.2. Chromosome pairing. Genetic consequences	238
5.5. Triploids	240
5.5.1. Origin	240
5.5.2. Chromosome pairing. Chiasmata	241
5.5.3. Anaphase I distribution	242
5.6. Higher polyploids	245
5.6.1. Autopolyploids. Origin and phenotypic effects	245
5.6.2. Chromosome pairing. Chiasmata. Meiotic configurations. Fertility	247
5.6.3. Natural autopolyploids	250
5.6.4. Genetic consequences. Tetrasomy	252
5.6.5. Crossing-over percentages	256
5.6.6. Inbreeding	258
5.7. Allopolyploids	260
5.7.1. Types	260
5.7.2. Diploidization	263
5.7.3. Genetic regulation of chromosome pairing	263
5.7.4. Allopolyploidization of autopolyploids	265
5.7.5. Genome analysis	267
5.7.6. Genetic consequences. Deviating segregations	271

5.7.7. Aneuploids in allopolyploids	271
5.7.8. Identification of homocologues	273
5.7.9. Chromosome addition	275
5.7.10. Chromosome substitution	276
5.7.11. Gene localization	279
5.7.12. Introduction of genes from other species	280
 Chapter 6, Genetic chromosome maps	 282
6.1. Gene maps	282
6.1.1. Three point test	282
6.1.2. Mapping functions	282
6.1.3. Intra-gene maps	284
6.1.4. Viruses	285
6.1.5. Bacteria	287
6.2. Genetic chromosome maps in prokaryotes with a single chromosome	290
6.2.1. Viruses	290
6.2.2. Bacteria	291
6.3. The correlation of genes with chromosomes in eukaryotes	292
6.3.1. Chromosomes and linkage groups	292
6.3.2. Haploidization	292
6.3.3. Gene-chromosome correlation from abnormal segregations	295
6.4. The localization of genes within chromosomes	296
6.4.1. Centromere mapping	296
6.4.2. Other cytological markers	300
6.4.3. Genetic chromosome maps from cytological data	305
 Chapter 7, Deviant cytogenetic systems	 307
7.1. Apomixis	307
7.1.1. Plants	307
7.1.2. Animals	309
7.2. Unusual segregations	310
7.2.1. Neocentric activity	310
7.2.2. Meiotic drive. Affinity. Distributive pairing	313
7.3. Other systems	315
7.3.1. Chromosome elimination	315
7.3.2. Somatic segregation	316
7.3.3. Episomes	318
7.4. Variation in chromosome mechanisms	319
