

CONTENTS

Preface	v
Introduction	vii
Acknowledgements	ix

SECTION I: SOMATIC PHYSIOLOGY

1. Metabolism	3
The Breakdown of Complex Organic Molecules	3
The Breakdown of Organic Molecules in Insects	6
The insect mitochondrion	6
Glycolysis	12
The oxidation of amino acids	16
The Intermediary Metabolism of Insects	19
Storage metabolism	19
Detoxication metabolism	20
Cuticle metabolism	23
Pigment metabolism	27
2. The Supply of Food	31
Food Intake	31
Digestive Enzymes	34
Carbohydrases	34
Proteinases	35
Lipases	36
The Control of Digestion	36
Absorption	38
Nutrition	40
Amino acids	42
Lipids	42
Vitamins	42
Conclusion	43
3. The Circulatory System	44
The Composition of Haemolymph	44
Soluble components	44
Haemocytes	48
The Pericardial Cells	49
The Circulation of Haemolymph	49
Conclusion	52

4. Food Storage	56
5. Osmoregulation	61
The Nature of the Problem	61
Structure of the Excretory System	63
The Production of Urine	63
Rectal Resorption	67
Resorption of water from the rectum	69
Resorption of solutes from the rectum	70
Regulatory Aspects	71
6. Nitrogenous Waste Products	75
Excretion of Waste Products	75
Uric acid and its primary degradation products	78
Urea	79
Ammonia	79
Amino acids	79
Miscellaneous materials	80
The Storage of Excretory Products	80
7. Respiratory Exchanges	81
The Structure of the Respiratory System	82
The Physiology of Respiration	85
Diffusion in the open system	85
Diffusion in the regulated system	88
"Discontinuous respiration"	91
Ventilation of the tracheal system	93
Conclusion	97

SECTION II: NEUROMUSCULAR PHYSIOLOGY

Introduction	101
8. Nerves and Muscles	103
Conduction of the Nerve Impulse	103
Neuromuscular Transmission	106
Anatomy of the motor end-plates	106
Physiology of the motor end-plates	108
The graded response	110
Flight muscle	110
Synaptic Transmission	113
9. Sense Organs	120
Photoreceptors	120
Mechanoreceptors	128
Chemoreceptors	134
Humidity receptors	137
Temperature sensitivity	138

10. Integrative Aspects of Nervous Function	139
The Neurophysiology of Escape Reactions	141
The startle response of the cockroach	141
Predator evasion by noctuid moths	143
Patterns of Activity in Motoneurons	147
The motor supply to spiracular muscles	147
The coxal adductor	149
Central Inhibition	151
11. Behaviour	157
The Fixed Motor Patterns of Insects	158
The Evocation of Motor Patterns	161
Endogenous input	163
Exogenous input	167
Learning	177
Conclusions	178

SECTION III: THE PHYSIOLOGY OF REPRODUCTION AND DEVELOPMENT

Introduction	183
12. Reproduction	184
Oögenesis	185
Spermatogenesis	189
Impregnation	191
Fertilization	192
13. Development	193
Growth	193
Differentiation	199
Diapause	204
14. Neuroendocrine Control Systems	208
Neuroendocrine Control of Growth and Development	208
The neurosecretory cells and the corpora cardiaca	210
The thoracic glands	211
The corpus allatum	214
Neuroendocrine Control of Reproduction	217
Other Neuroendocrine Control Mechanisms	220

SECTION IV: ASPECTS OF PHYSIOLOGICAL ECOLOGY

Introduction	225
15. Temperature Effects	229
The temperature of insects	231
The effect of temperature on birth-rate	234
The effect of temperature on death-rate	235
Conclusion	239

16. Humidity Effects	241
The Water Reserves of Insects	243
The Water Balance of Insects	244
Losses of water	244
Gains of water	248
Summary	249
Effects of Humidity on the Rate of Birth	250
Humidities of Insect Habitats	252
Postscript	254
References	256
Appendix: Index to Insects	261
Author Index	265
Subject Index	269
