General Preface to the Series	iii
Preface	iii
1 Principles of Gaseous Exchange	1
1.1 Definitions and explanations 1.2 Fick's Law – a model for diffusion 1.3 Values of coefficients 1.4 Facilitated diffusion 1.5 Importance of gaseous exchange by diffusion 1.6 Conclusion	
2 Surfaces for Gaseous Exchange	11
2.1 Integuments 2.2 Gills 2.3 Lungs 2.4 Tracheae 2.5 Physical gills and plastrons 2.6 Water lungs 2.7 Models of exchangers	
3 Respiratory Gas Transport by the Blood	23
3.1 Limits to diffusion 3.2 Distribution of respiratory pigments 3.3 Structural and functional properties 3.4 Oxygen affinity and the oxygen equilibrium curve 3.5 Adaptations to environment 3.6 Evolution of the respiratory pigments	
4 Factors of Energy Expenditure	42
4.1 Oxygen availability 4.2 Exposure temperature 4.3 Activity level 4.4 Body size 4.5 Nutrition 4.6 Salinity 4.7 Photoperiod and rhythms 4.8 Conclusion	
5 Regulation of Respiration	56
5.1 Regulation of tracheal respiration in an insect 5.2 Regulation in a crustacean with open circulation 5.3 Regulation in an annelid with closed circulation.	
6 Life in Hypoxic and Anoxic Environments	67
6.1 Short-term anaerobiosis in insects 6.2 Facultative anaerobiosis in an intertidal mollusc 6.3 Obligatory anaerobiosis in a parasitic helminth 6.4 Conclusion	
Further Reading	72
