

CONTENTS

Preface

xv

I. NATURE AND VARIETY OF LIVING ORGANISMS	1
1 Introducing biology	
1.1 What is biology?	3
1.2 What use is biology?	4
1.3 How biologists work	4
1.4 Biological terms	5
1.5 Biological investigation	5
1.6 Numbers	7
1.7 Biological calculations	8
1.8 Graphs	10
1.9 Measurement of length	13
1.10 Measurement of area	13
1.11 Measurement of volume	14
1.12 Measurement of mass/weight	14
1.13 Surface area relationship	16
1.14 Questions	18
2 Variety of living organisms	
2.1 Introduction	20
2.2 The species	20
2.3 Naming the organism — nomenclature	20
2.4 Classification of organisms	21
2.5 Classification of the plant kingdom	22
2.6 Classification of the animal kingdom	31
2.7 Questions	46
3 Nature of living organisms	
3.1 Characteristics of living organisms	47
3.2 Microscopes	48
3.3 The cell theory	49
3.4 Cell structure	52
3.5 Unicellular organisms	55
3.6 Multicellular organisms and tissues	56
3.7 Multicellular organisms and organ systems	58

	3.8	Mammal tissues	59
	3.9	Flowering plant tissues	61
	3.10	Flowering plant organs	63
	3.11	Questions	70
4 Biochemical principles	4.1	Chemical elements	73
	4.2	Chemical compounds	73
	4.3	Classifying chemical compounds	76
	4.4	Mixtures	76
	4.5	Water	77
	4.6	Acids	77
	4.7	Bases	77
	4.8	Salts	77
	4.9	The pH scale	78
	4.10	Chemical reactions	79
	4.11	Lipids	82
	4.12	Carbohydrates	83
	4.13	Proteins	85
	4.14	Enzymes	85
	4.15	Nucleic acids — polynucleotides	86
	4.16	Questions	87
5 Biophysical principles	5.1	Movement of molecules	88
	5.2	Solutions	89
	5.3	Movement by diffusion	91
	5.4	Permeability	93
	5.5	Osmosis	94
	5.6	Active transport	96
	5.7	Surface tension and capillarity	96
	5.8	Energy	96
	5.9	Pressure	98
	5.10	Bodies moving in fluids	98
	5.11	Heat	99
	5.12	Light	101
	5.13	Atomic structure	102
	5.14	Questions	104

II. LIFE PROCESSES 107

6 Plant nutrition	6.1	Nutrition	109
	6.2	Photosynthesis	109
	6.3	The rate of photosynthesis	116

	6.4	The leaf in photosynthesis	118
	6.5	The biochemical mechanism of photosynthesis	123
	6.6	Questions	124
7 Animal nutrition	7.1	Types of nutrition	126
	7.2	Physical and chemical food changes	126
	7.3	Heterotrophic nutrition	128
	7.4	Liquid feeders	129
	7.5	Filter feeders	132
	7.6	Large-particle feeders	132
	7.7	Digestion in man	137
	7.8	Absorption	141
	7.9	The herbivore mammal gut	145
	7.10	Questions	147
8 Food and man	8.1	Food functions	149
	8.2	Food composition	149
	8.3	Energy value of food	151
	8.4	Energy needs	152
	8.5	Carbohydrates in foods	154
	8.6	Lipids in foods	154
	8.7	Proteins in foods	155
	8.8	Ethanol	158
	8.9	Minerals in foods	159
	8.10	Vitamins in foods	162
	8.11	Fibre in foods	166
	8.12	Water	166
	8.13	A balanced diet	167
	8.14	Questions	167
9 Transport	9.1	Introduction	169
	9.2	Principles of transport; transport in simple organisms	169
	9.3	Transport in flowering plants: water absorption	171
	9.4	Flowering plants: transpiration	173
	9.5	Flowering plants: translocation	177
	9.6	Transport in animals: mammal blood	180

	9.7	Mammals: blood functions	181
	9.8	Mammals: blood vessels	183
	9.9	Mammals: the heart	184
	9.10	Mammals: blood circulation	187
	9.11	Mammals: exchange at the cells	189
	9.12	Mammals: lymph and lymphatic system	189
	9.13	Storage in plants and animals	190
	9.14	Questions	192
10		Respiration	
	10.1	Introduction	193
	10.2	Energy release in living cells	193
	10.3	Cell respiration without oxygen	196
	10.4	Cell respiration with oxygen	199
	10.5	External respiration	203
	10.6	External respiration in small animals	205
	10.7	External respiration in insects	205
	10.8	External respiration in a bony fish	206
	10.9	External respiration in man and mammals	208
	10.10	External respiration in flowering plants	215
	10.11	Questions	218
11		Growth	
	11.1	Introduction	220
	11.2	The cell nucleus	220
	11.3	Cell division	223
	11.4	Seeds	226
	11.5	Metamorphosis in animals	229
	11.6	Growth regions	233
	11.7	Growth measurement	237
	11.8	Growth factors	239
	11.9	Growth hormones	240
	11.10	Tropisms — growth movements	240
	11.11	Questions	245
12		Homeostasis	
	12.1	Principles of homeostasis	248
	12.2	The liver	249

	12.3	Blood sugar control	251
	12.4	Excretion	253
	12.5	Osmoregulation	253
	12.6	Excretion and osmoregulation in animals	253
	12.7	The kidney	255
	12.8	Osmoregulation in plants	260
	12.9	The skin	261
	12.10	Temperature regulation	264
	12.11	Temperature control in ectotherms	265
	12.12	Temperature control in endotherms	265
	12.13	Homeostatic temperature control in endotherm animals	268
	12.14	Questions	269
13 Irritability	13.1	Stimulus	270
	13.2	Nervous systems	270
	13.3	Receptors	273
	13.4	The human eye	274
	13.5	The insect eye	281
	13.6	The human ear	282
	13.7	Human skin	287
	13.8	Human nose and tongue	287
	13.9	Insect sensory organs	288
	13.10	Neurones	288
	13.11	Nervous coordination — the central nervous system	291
	13.12	The nerve impulse pathways	295
	13.13	Chemical coordination	298
	13.14	Homeostasis in the endocrine and nervous systems	300
	13.15	Plant responses	302
	13.16	Questions	302
14 Support and movement	14.1	Physical principles	304
	14.2	Hydrostatic skeletons and exoskeletons	305
	14.3	Endoskeletons	307
	14.4	Functions of a mammal skeleton	315

CONTENTS

	14.5	Movement in animals	316
	14.6	Skeletal muscle	319
	14.7	Human body support	320
	14.8	Levers in locomotion	321
	14.9	Locomotion in water — fish	323
	14.10	Locomotion on land	324
	14.11	Locomotion in air — birds and insects	327
	14.12	Support and movement in plants	331
	14.13	Questions	332
15	15.1	Reproduction Introduction	334
	15.2	Asexual reproduction	334
	15.3	Vegetative reproduction	338
	15.4	Sexual reproduction	344
	15.5	Sexual reproduction in non-seed-bearing plants	345
	15.6	Sexual reproduction in seed-bearing plants	348
	15.7	Pollination	351
	15.8	Fertilisation	353
	15.9	Fruits	353
	15.10	Sexual reproduction in invertebrate animals	355
	15.11	Sexual reproduction in vertebrate animals	357
	15.12	Sexual reproduction in mammals	359
	15.13	The human reproductive system	359
	15.14	Fertilisation	363
	15.15	Birth control	364
	15.16	Development and pregnancy	365
	15.17	Birth	366
	15.18	Parental care	367
	15.19	Questions	368
16	16.1	Genetics Introduction	369
	16.2	Phenotype	369
	16.3	Genetic material — the chromosomes	370
	16.4	Genetic material — the genes	374

	16.5	Meiosis	376
	16.6	Nuclear division in the life-cycle	378
	16.7	Principles of inheritance	379
	16.8	The back or test cross	384
	16.9	Incomplete dominance	385
	16.10	Inheritance of human blood groups	388
	16.11	Sex linkage	390
	16.12	Human heredity	392
	16.13	Non-heritable variation	393
	16.14	Heritable variation	396
	16.15	Questions	399
17 Evolution	17.1	Introduction	400
	17.2	Chemical evolution	400
	17.3	Evidence for organic evolution	401
	17.4	Theories of evolution	406
	17.5	Genetics and evolution	407
	17.6	Gene pool	408
	17.7	Factors affecting the gene pool	408
	17.8	Sickle cell anaemia	409
	17.9	Natural selection in action	410
	17.10	New species formation	412
	17.11	Questions	413

III. ENVIRONMENTAL BIOLOGY		415
-----------------------------------	--	-----

18 Ecology	18.1	Introduction	417
	18.2	Ecology	417
	18.3	Identification of the species	418
	18.4	Investigating a natural habitat	418
	18.5	Soil	421
	18.6	Soil as a habitat	426
	18.7	Interrelations between organisms	428
	18.8	Processes in the ecosystem	434
	18.9	Energy flow in the ecosystem	439

	18.10	Cycling of chemical elements in the ecosystem	440
	18.11	Questions	444
19		Man and disease	
	19.1	Disease	445
	19.2	Warning: working with microbes	445
	19.3	Bacteria	446
	19.4	Viruses	454
	19.5	Fungi	457
	19.6	Protozoa	461
	19.7	Body defences against pathogens	464
	19.8	Questions	467
20		Man and the external environment	
	20.1	Man's population	468
	20.2	The human population explosion	471
	20.3	Man and agriculture	476
	20.4	Pests	478
	20.5	Man and resources	482
	20.6	Man and pollution	483
	20.7	Man and conservation	488
	20.8	Questions	491
		<i>General index</i>	493
		<i>Name index</i>	513
		<i>Generic name index</i>	514
