

CONTENTS

PREFACE	iii	Classification of Viruses	18
Part I Introduction	vii	Structure of Viruses	21
CHAPTER 1. HISTORICAL DEVELOPMENT AND SIGNIFICANCE OF MICROBIAL ECOLOGY	1	Bacterial Classification	23
Ecology and Microbial Ecology	1	Structure of Bacteria	30
Historical Overview	2	Classification of Fungi	33
The Beginnings of Microbiology	2	Structure of Fungi	38
The Pure Culture Period	2	Classification of Algae	41
Early Contributions to Microbial Ecology	3	Structure of Algae	46
Developments in the Second Half of the Twentieth Century	5	Classification of Protozoa	46
Sources of Information for the Microbial Ecologist	5	Structure of Protozoa	49
Opportunities for the Microbial Ecologist	12	References and Suggested Readings	49
References and Suggested Readings	12	CHAPTER 3. MICROBIAL METABOLISM	51
Part II Microbial Diversity and Metabolism: A Review	15	Generation of ATP	51
CHAPTER 2. MICROBIAL CLASSIFICATION AND STRUCTURE	15	Autotrophic Generation of ATP	52
Classification of Microorganisms	17	Heterotrophic Generation of ATP	55
		Oxidation	60
		Assimilation of Biopolymers	65
		Autotrophic CO ₂ Fixation	65
		Heterotrophic CO ₂ Fixation	66
		Fatty Acid Biosynthesis	66
		Storage Products: Biopolymers	66
			67

Amino Acid Biosynthesis	55
Protein Biosynthesis	57
Nutritional Requirements other than Carbon	59
Energy Classification	71
Control of Protein Synthesis and Activity	75
References and Suggested Readings	77

Part III Ecological Parameters

CHAPTER 4. DETERMINATION OF MICROBIAL NUMBERS, BIOMASS AND ACTIVITIES

Sampling	81
Sample Processing	82
Direct Count Procedures	85
Viable Count Procedures	87
Plate Count	88
Most Probable Number (MPN)	104
Biochemical Methods for Estimating Numbers of Microorganisms	106
Protein	106
ATP and Total Adenosine	107
Chlorophyll	109
LPS	119
Mucic Acid	112
Measurement of Microbial Biomass	117
Measurement of Microbial Metabolism	119
Photosynthesis and Respiration	113
Heterotrophic Potential	118
Energy Charge	120
Specific Enzyme Assays	120
Life Detection Systems	125
References and Suggested Readings	128

CHAPTER 5. EFFECTS AND MEASUREMENT OF ENVIRONMENTAL DETERMINANTS	131
Liebig's and Shelford's Laws	133
Temperature	135
Radiation	142
Pressure	147
Salinity-Conductivity	151
Moisture-Water Activity	154
Movement	156
Space	157
Hydrogen Ion Concentration	157
Alkalinity	159
Redox Potential	159
Magnetism	161
Organic Compounds	161
Inorganic Compounds	165
References and Suggested Readings	166

CHAPTER 6. A HABITAT APPROACH TO MICROBIAL ECOLOGY	171
The Benthic and its Microbial Inhabitants	171
Auto-Ecophore	172
Characteristics and Stratification of the Atmosphere	172
The Atmosphere as Habitat and as Medium for Microbial Dispersal	174
Hydro-Ecophore: Freshwater Habitats	174
The Neuston	174
Lakes	174
Swamps and Bogs	175
Rivers	175
Composition and Activity of Freshwater Microbial Communities	176
Hydro-Ecophore: Marine Habitats	176

Estuaries	195
Characteristics and Stratification of the Ocean	196
Composition and Activity of Marine Microbial Communities	198
Lithoautotrophs	214
Biode	206
Genesis and Characterization of Soils	212
Composition of Soil Microbial Communities	213
References and Suggested Readings	213

CHAPTER 5. STRUCTURE AND DEVELOPMENT OF MICROBIAL COMMUNITIES AND ECOSYSTEMS

Ecological Hierarchy	223
Alteration and Natural Selection of Microbial Populations	224
Distribution and Stratification of Microbial Communities	231
Terrestrial and Succession	231
Microbial Succession in Springs and Fumarization	235
Marineal Succession in Animal Hosts	235
Clonal, Heterocyclic and Secondary Succession	239
Diversity in Microbial Communities	240
References and Suggested Readings	245

Part IV Population Interactions

CHAPTER 6. INTERACTIONS BETWEEN MICROORGANISMS

Interactions within a Single Microbial Population	245
Interactions between Diverse Microbial Populations	252
Nutrition	253

Competition	255
Synergism (Protocooperation)	258
Mutualism (Symbiosis)	263
Competition	266
Antagonism (Antagonism)	270
Parasitism	273
Predation	276
References and Suggested Readings	281

CHAPTER 9. INTERACTIONS OF MICRO-ORGANISMS WITH PLANTS

Interaction with Plant Roots	286
Rhizosphere	286
Mycorrhiza	291
Symbiotic Nitrogen Fixation in Nodules	295
Interactions with Aerial Plant Structures	296
Microbial Diseases of Plants — Plant Pathogens	300
References and Suggested Readings	314

CHAPTER 10. INTERACTIONS OF MICRO-ORGANISMS WITH ANIMALS

Feeding and Predation of Microorganisms by Animals	318
Microbial Contributors to Food Digestion and Animal Nutrition	319
Association External to the Animal	319
Association Internal to the Animal	325
Symbiotic Associations with Photosynthetic Microorganisms	330
Other Fungal — Invertebrate Associations	332
Symbiotic Light Production	333
Microorganisms Occupying Habitats on the Body Surface of Man	335
Some Biological Aspects of Animal Diseases	339
References and Suggested Readings	344

Part V Biogeochemical Cycling and Applied Aspects of Microbial Ecology

CHAPTER 11. BIOGEOCHEMICAL CYCLING 349

The Carbon Cycle	351
Carbon Transfer through Food Webs	352
Carbon Cycling within Habitats	355
Microbial Degradation of Natural Polymers	357
Bioaccumulation and Biotransformation of Pollutants in Aquatic Environments	359

The Hydrogen Cycle	361
--------------------	-----

The Oxygen Cycle	361
------------------	-----

The Nitrogen Cycle	362
Fixation of Molecular Nitrogen	364
Nitrification	366
Nitrate Reduction and Denitrification	368

The Sulfur Cycle	369
Sulfur Oxidation	371
Sulfate Reduction	372
Some Practical Implications of the Sulfur Cycle	373

The Phosphorus Cycle	375
----------------------	-----

The Iron Cycle	377
----------------	-----

Other Element Cycles	378
----------------------	-----

References and Suggested Readings	380
-----------------------------------	-----

CHAPTER 12. ECOLOGICAL ASPECTS OF BIODETERIORATION CONTROL, SOIL, WATER AND WASTE MANAGEMENT 382

Control of Bioterrorism	382
Management of Agricultural Soils	384
Controlling of Solid Waste	385
Treatment of Liquid Wastes	387
Biological Oxygen Demand (BOD)	388
Aerobic Treatments	389

Anaerobic Treatments	405
Tertiary Treatments and Disinfection	407
Treatment and Safety of Water Supplies	408
References and Suggested Readings	412

CHAPTER 13. MICROORGANISMS AND SOME NOVEL POLLUTION PROBLEMS 415

Pesticides and Biotransformation of Neurobiological Toxins	415
Emulsifier Biodegradation	418
Synthetic Polymers	420
Allyl Benzyl Sulfonates	422
Oil Pollution	423
Preservatives	425
Testing for Biodegradability and Biotransformation	431
Testing for Effects on Neurological Microorganisms	432
Microbial Interactions with Some Inorganic Pollutants	433
Acid Mine Drainage	435
Microbial Conversion of Nitrate	435
Microbial Melanization	437
Microbial Accumulation of Heavy Metals and Antimicrobials	438
References and Suggested Readings	440

CHAPTER 14. MICROORGANISMS IN MINERAL RECOVERY, BIOMASS AND ENERGY PRODUCTION 443

Recovery of Metals	443
Recovery of Phosphorus	446
Production of Microbial Biomass	451
Production of Fuels	455
Ethanol	455
Methane	457
Hydrocarbons other than Methane	460
Hydrogen	461
References and Suggested Readings	462

CHAPTER 15. ECOLOGICAL CONTROL BY PESTS AND DISEASE-CAUSING POPULATIONS

Modification of Host Populations	454
Modification of Reservoir of Pathogens	455
Modification of Vector Populations	457
Use of Microbial Antagonism and Parasitism for Control of Microbial Pathogens	463
Use of Microbial Pathogens and Predators for Controlling Pest Populations of Plants and Animals	469
References and Suggested Readings	477

Part VI Experimental Design and Data Analysis

CHAPTER 16. STATISTICS IN MICROBIAL ECOLOGY

Data Collection and Experimental Design	482
Estimation of Control Tendency	486
Measurement of Variability and Hypothesis Testing	487
Range, Variance and Standard Deviation	493
Significance and Hypothesis Testing	495
The Student <i>t</i> Test	497
Analysis of Variance	497

Correlation and Regression	498
Cluster Analysis	500
Factor Analysis	506
Composats — The Pragmatic Approach to Statistics	509
References and Suggested Readings	510

CHAPTER 17. ECOSYSTEM MODELING IN MICROBIAL ECOLOGY

Experimental Models	511
Batch Systems	512
Flow-through Systems	514
Microcosms	515
Glass-free Animals and Plants	516
In situ Incubation	519
Extracellular Systems	519
Mathematical Models	520
Selecting the Components	521
Defining Interactions between Components	523
Symbols and Equations Used in the Construction of Models	525
References and Suggested Readings	527
INDEX	528
