SECTION ONE	
INTRODUCTION	1

1. What's in a Name?	3
-----------------------------------	----------

Background: *Early history. World War II to 1950. Later years.* The field in overview: *Section one. Introduction. Section two. Personnel psychology. Section three. Organizational psychology. I/O psychology as a science and profession: Educational background. Employment. So what's in a name?*

2. Research	13
--------------------------	-----------

Basic concepts: *The independent variable. The dependent variable. Extraneous variables. Control. Inferences about causality. Experimental design: Laboratory experimentation. Laboratory versus field experiments. Field experimentation. Nonexperimental research procedures: Systematic observation. Unobtrusive measures. Research interviews. Questionnaires. Data processing and interpretation: Data distributions. Descriptive statistics. Variability. Statistical inference.*

3. Correlation and Psychometric Theory	32
---	-----------

Two-variable correlation: *Correlation as overlapping variance. Regression. Interpreting correlations. Multiple correlation. Psychometric theory: The nature of psychometric error. Estimating reliability: Test-retest. Equivalent forms. Split-halves method.*

SECTION TWO	
PERSONNEL PSYCHOLOGY	51

PART A <i>DEFINING AND MEASURING PERFORMANCE</i>	53
---	-----------

4. Job Analysis and Occupational Classification	55
--	-----------

Some uses of job analysis: *Selection and placement. Performance appraisal. Training and development programs. Job evaluation and compensation. Job design. Organizational structure. Types and sources of information. Functional job analysis: Worker activities. Functional level. An illustration. Personnel specifications: Judgment only. Measurement. Synthetic estimates. Occupational class-*

ifications: *A classification reflecting job content. A classification reflecting worker prerequisites. Job dimensions: A dual classification. Occupational classification and job analysis.*

5. **Criterion Development** 73
Psychometric requirements of criteria: Criterion validity. Freedom from bias. Multidimensionality of criteria: A classification of criteria. Composite versus multiple criteria. Combining criteria into a composite. Approaches to employee selection: The traditional approach. The differential prediction approach.
6. **Performance Appraisal** 89
Performance measures: Productivity. Promotions and salary. Tenure and turnover. Miscellaneous. Error and bias in performance evaluation: Distributional errors. Halo effect. Egocentric effects. Sequential effects. Evaluator bias. Approaches to rating: Relative versus absolute. Direct versus derived ratings. Direct rating procedures: Ranking. Graphic ratings. Behaviorally anchored scales. Derived rating procedures: Paired comparisons. Checklists. Forced choice. Mixed standard scales. Who should rate?

PART B PREDICTING PERFORMANCE: PERSONNEL SELECTION AND PLACEMENT 111

7. **Validity and Prediction** 113
Two types of validity: Descriptive validities. Criterion-related validities. Two issues: Shrinkage and restriction of range: Shrinkage. Restriction of range. Prediction for selection: Two kinds of selection errors. Two emphases in selection. Reducing false positives. "Optimizing" selection. Predictive utility. Fairness in selection: A concept of fairness. Circumstances requiring differential prediction: Differential prediction not needed. Differential prediction is required. Differential validity.
8. **Biodata and Preemployment Interviews** 139
Personal history: Application blanks. Biographical information blanks. Veracity. Biodata validity. Selection interview: Methodological issues. Interview validity. Interview reliability. Interview dynamics. Participant characteristics. Process variables.
9. **Psychological Tests** 161
History of psychological testing. Test standards and ethics: Characteristics of useful tests. Choosing trial tests. Norms. Types of tests: Test formats. Attributes measured. Cognitive abilities: General intellectual abilities. Specific cognitive abilities. Tests of motor and physical abilities: Motor abilities. Physical abilities. Affective attributes: Personality inventories. Interest inventories. Job samples and simulations: Job samples as complex measures. Task sampling. Task simulations: Assessment centers.

PART C FACILITATING PERFORMANCE 191**10. Training 195**

A systems context for training. Analyzing training needs: *Components of needs analysis. Needs analysis in perspective. Principles of learning: Motivation. Organization of knowledge and skill. Transfer of training. Principles of training. Some specific strategies: Simulation. On-the-job training. Information presentation. Evaluating training programs: Expert opinion. Empirical evaluations. Training the hard-core unemployed: HCU as a cultural phenomenon. Implications.*

11. Human Factors in Performance 216

Physical work environment: *Research issues. Research findings. Arousal theory. Work schedules and assignments: Fatigue. Scheduling variations. Engineering psychology: Allocation of functions. Inputs to people from machines. Outputs from people to machines.*

**SECTION THREE
ORGANIZATIONAL PSYCHOLOGY 239****PART A INDIVIDUAL VARIABLES 243****12. Motivational Theories 245**

Content theories: *Need-hierarchy theory. ERG theory. Two-factor theory. Process theories: Reinforcement theory — operant conditioning. Expectancy theory. Equity theory. Goal theory. Conclusions.*

13. Job Satisfaction 271

A historical overview of job satisfaction: *Scientific management. The Hawthorne studies. Hoppock's research. Theoretical approaches: Discrepancy theory. Model of facet satisfaction. Opponent-process theory. Components of job satisfaction: Intrinsic features of the work. Pay. Supervision. Measuring job satisfaction: Questionnaires. Interviews. Consequences of job satisfaction and dissatisfaction: Effects on productivity. Effects on absenteeism and turnover. Effects on health. Societal trends: HEW Task Force report. Special issues. Some future directions.*

PART B INDIVIDUALS IN GROUPS 297**14. Group Behavior 299**

Two classic studies: *Bank wiring observation room study. The Tavistock Institute coal mining study. Groups in organizations: Formal and informal groups. Group norms. Cohesion. A theory of group influence: Basic concepts. The impact of ambient stimuli. The impact of discretionary stimuli. Group influence on individual performance. Group problem solving: Dimensions of effective decisions. Stages in*

decision making. *Strategies. Difficulties. Two nontraditional approaches. Toward a theoretical integration.*

15. **Leadership** 322
Leadership determinants: *The search for traits. Fiedler's contingency model. Leadership dimensions: Ohio State studies. Path-goal theory. Leadership strategies: A prescriptive model: Taxonomy of strategies. Rules for selecting the strategy. Applying the rules. Research. Concluding note. By way of integration: A backward glance.*

PART C ORGANIZATIONAL DYNAMICS 349

16. **Organizational Theories** 351
Classical theory: *Division of work. Delegation of authority. Chain of command. Span of control. Critique. Modern theories: McGregor: Theory X and Theory Y. Likert: Four-system organizational typology. Lawrence and Lorsch: Contingency theory. A review of modern organization theory.*
17. **Organization Development Technologies** 376
What is OD? An example of OD. OD technologies: *Laboratory training — sensitivity training. Survey feedback. Grid OD. Process consultation. The confrontation meeting. Job design. The future of OD.*
18. **Organization Change: Theoretical Models and Case Histories** 401
Theoretical models of organization change: *Lewin's model. Planned change. Action research model. Intervention theory and method. An overview of change models. An unsuccessful attempted change: The change program. Difficulties arise. Lessons learned. Analysis. Weldon Company: A success story: Weldon described. Harwood and Weldon compared. The change program. The outcome: Weldon, 1964. Analysis.*
