## **Preface, xiii**

## **Acknowledgements, xv**

### **1 Introduction, 1**

Some historical perspectives, 3

The classical precipitin reaction, 4

The basis of specificity, 6

The forces binding antigen to antibody, 7; Antibody affinity, 12; Avidity and the bonus effect of multivalent binding, 13;

Specificity and cross-reactions, 14; The antibody site and antigen determinants, 15

Summary, 17

Further reading, 18

### **2 The Immunoglobulins, 21**

The basic structure of the immunoglobulins, 21

Variations in structure of the immunoglobulins, 24

Structural variation in relation to antibody specificity, 27;

Variability in structure unrelated to antibody specificity, 29

Comparison of immunoglobulin classes, 33

Immunoglobulin subclasses, 41; Other immunoglobulin variants, 41

Summary, 45

Further reading, 46

### **3 The Immune Response I—Fundamentals, 47**

Two types of immune response, 47

Role of the small lymphocyte, 47

Primary response, 47; Secondary response—memory, 48

The thymus, 49

The Bursa of Fabricius, 51

Two populations of lymphocytes: T- and B-cells, 53

Identification of B- and T-lymphocytes, 60; Lymphocyte surface phenomena, 63

Cellular co-operation in the antibody response, 65

The role of antigen-processing cells, 65; Co-operation between T- and B-cells, 67; Soluble factors in co-operation, 68; Relevance to antigenicity, 68

The cell-mediated immune response, 72

The activation of T-cells, 73; The two arms of the cell-mediated response, 75

The anatomical basis of the immune response, 77

Lymph node, 77; Spleen, 81; Unencapsulated lymphoid tissue, 81

Summary, 83

Further reading, 85

## **4 The Immune Response II—Further Aspects, 87**

Synthesis of humoral antibody, 87

Detection of antibody-forming cells, 87; Protein synthesis, 89; Abnormal immunoglobulin synthesis, 89; Monoclonal antibodies, 91; Immunoglobulin classes, 94.

Genetic control of the antibody response, 97

Genes affecting general responsiveness, 97; Immune response linked to immunoglobulin genes, 97; Immune response linked to the major histocompatibility complex, 98

Regulation of the immune response, 101

Suppressor T-cells, 102; Idiotypic networks, 105

Immunological tolerance, 110

At birth, 110; In the adult, 113; Mechanisms, 114

Ontogeny of the immune response, 116

T-cells and the thymus, 116; The differentiation of B-cells, 119; The neonatal period, 120; Lymphoid malignancies, 120

Phylogeny of the immune response, 123

Summary, 124

Further reading, 125

## **5 The Immune Response III—Theoretical Aspects, 127**

Instructive theory, 127

Selective theory, 127

Evidence for a selective theory, 128

Clonal selection model, 129

Evidence for clonal selection model, 130

One cell/one immunoglobulin, 130; Relation of surface antibody to future performance, 130

Validity of the clonal selection model, 131

Genetic theories of antibody variability, 134

Genes coding for antibody, 135; The generation of diversity, 139

Summary, 142

Further reading, 143

## **6 Interaction of Antigen and Antibody, 145**

Precipitation, 145

Precipitation in gels, 145; Single radial immunodiffusion (SRID), 147; Immunoelectrophoresis, 147; Quantification by nephelometry, 151

Radioactive binding techniques, 151

Measurement of antibody, 151; Measurement of antigen, 153; Non-radioactive labels, 155

Immunohistochemistry, 155

Immunofluorescence, 155; Other labelled antibody methods, 158

Reactions with cell surface antigens, 159

Binding of antibody, 159; Agglutination, 159; Opsonic (Fc) adherence, 161; Stimulation, 162; Cytotoxic reactions, 163

Complement, 164

Nature of complement, 164; Activation of complement, 165; The complement sequence, 166; Role in defence, 170; Role in disease, 172; Complement deficiencies, 173; Genetics, 174

Neutralization of biological activity, 175

Summary, 175

Further reading, 177

- 7 Immunity to Infection I—Mechanisms, 179**
  - Innate immunity, 179
    - Preventing entry, 179; Counter-attack against the invaders, 181; The role of complement, 186
  - Acquired immunity, 187
  - Immunity to bacterial infection, 188
    - Role of humoral antibody, 188; Role of cell-mediated immunity (CMI), 194
  - Immunity to viral infection, 198
    - Antigenic drift and shift, 198; Protection by serum antibody, 199; Local factors, 200; Cell-mediated immunity, 201
  - Immunity to parasitic infections, 203
    - Protozoa, 203; Helminths, 206
  - Further reading, 208
  
- 8 Immunity to Infection II—Prophylaxis and Immunodeficiency, 209**
  - Prophylaxis, 209
    - Passively acquired immunity, 209; Vaccination, 210
  - Primary immunodeficiency, 220
  - Secondary immunodeficiency, 226
  - Summary, 228
  - Further reading, 231
  
- 9 Hypersensitivity, 233**
  - Type I—anaphylactic sensitivity, 233; Type II—antibody-dependent cytotoxic hypersensitivity, 233; Type III—complex-mediated hypersensitivity, 234; Type IV—cell-mediated (delayed-type) hypersensitivity, 234; Type V—stimulatory hypersensitivity, 235
  - Type I—anaphylactic sensitivity, 236
    - Systemic anaphylaxis, 236; Mechanism of anaphylaxis, 237; Atopic allergy, 240
  - Type II—antibody-dependent cytotoxic hypersensitivity, 242
    - Isoimmune reactions, 243; Autoimmune reactions, 246; Drug reactions, 248
  - Type III—complex-mediated hypersensitivity, 248
    - Locally formed complexes, 250; Circulating complexes (serum sickness), 254; Detection of immune complex formation, 256; Treatment, 257
  - Type IV—cell-mediated (delayed-type) hypersensitivity, 257
    - Cellular basis, 258; *In vitro* tests for cell-mediated hypersensitivity, 259; Tissue damage, 260
  - Type V—stimulatory hypersensitivity, 262
  - Summary, 263
  - Further reading, 267
  
- 10 Transplantation, 269**
  - Evidence that rejection is immunological, 269
  - Transplantation antigens, 271
    - Genetics, 271; The major histocompatibility complex in mice, 273; The major histocompatibility complex in man, 278
  - Rejection mechanisms, 279
    - Lymphocyte-mediated rejection, 279; The role of humoral antibody, 280

*Chapter 10 continued*

Prevention of graft rejection, 284

Tissue matching, 284; General immunosuppression, 285;

Antigen-specific depression of allograft reactivity, 287

Clinical experience in grafting, 290

Biological significance of the major histocompatibility complex, 292

Recognition systems, 292; Polymorphism, 296;

Immunological relationship of mother and fetus, 296; The

cancer cell and the allograft reaction, 298; Relation of MHC

to the complement system, 303; Association with disease, 304

Summary, 307

Further reading, 309

## **11 Autoimmunity, 311**

The spectrum of autoimmune diseases, 311

Autoantibodies in human disease, 312

Overlap of autoimmune disorders, 313

Genetic factors in autoimmune disease, 316

Aetiology of autoimmune response, 321

T-Inducer bypass mechanisms, 323; Regulatory bypass mechanisms, 327

Pathogenic mechanisms in autoimmune disease, 330

Effects of humoral antibody, 330; Effects of complexes, 337;

Cellular hypersensitivity, 341; Experimental models of autoimmune disease, 343

Diagnostic value of autoantibody tests, 346

Treatment of autoimmune disorders, 346

Summary: comparison of organ-specific and non-organ-specific diseases, 350

Further reading, 351

## **Appendix, 353**

## **Index, 355**
