## The molecular biology of the Kinetoplastidae

*Christine E. Clayton*

|     |                                                                        |    |
|-----|------------------------------------------------------------------------|----|
| I   | Introduction . . . . .                                                 | 2  |
| II  | General features of the genome . . . . .                               | 5  |
|     | A DNA content and ploidy . . . . .                                     | 5  |
|     | B Genetic experiments with trypanosomes . . . . .                      | 7  |
|     | C Trypanosomatid karyotype . . . . .                                   | 7  |
|     | D Molecular biological techniques for classification . . . . .         | 8  |
| III | Structure and function of kinetoplast DNA . . . . .                    | 9  |
|     | A General . . . . .                                                    | 9  |
|     | B The minicircles . . . . .                                            | 10 |
|     | C The maxicircles . . . . .                                            | 14 |
|     | D Regulation of maxicircle transcription in <i>T. brucei</i> . . . . . | 17 |
|     | E Kinetoplast defects . . . . .                                        | 19 |
| IV  | Antigenic variation in African trypanosomes . . . . .                  | 20 |
|     | A Biology of variation . . . . .                                       | 20 |
|     | B Gene switching . . . . .                                             | 22 |
|     | C VSG transcription . . . . .                                          | 25 |
| V   | The mini-exon in trypanosomatid transcription . . . . .                | 28 |
| VI  | The ribosomal RNAs . . . . .                                           | 33 |

|      |                                                                      |    |
|------|----------------------------------------------------------------------|----|
| VII  | Housekeeping genes . . . . .                                         | 35 |
| A    | General points . . . . .                                             | 35 |
| B    | Tubulin genes . . . . .                                              | 36 |
| C    | Glycolytic enzyme genes of <i>T. brucei</i> . . . . .                | 37 |
| D    | Calmodulin . . . . .                                                 | 39 |
| E    | Putative calcium-binding protein in <i>T. cruzi</i> . . . . .        | 39 |
| F    | Heat-shock genes of <i>T. brucei</i> and <i>Leishmania</i> . . . . . | 40 |
| G    | Gene amplification in <i>Leishmania</i> . . . . .                    | 42 |
| VIII | Mobile elements . . . . .                                            | 44 |
| IX   | DNA transformation studies . . . . .                                 | 45 |
| X    | Conclusion . . . . .                                                 | 46 |
| XI   | Acknowledgements . . . . .                                           | 48 |
| XII  | References . . . . .                                                 | 48 |
| XIII | Notes added in proof . . . . .                                       | 55 |

## The cloning of antigen genes from malarial parasites and *Leishmania* species

John G. Scaife

|     |                                      |    |
|-----|--------------------------------------|----|
| I   | Introduction . . . . .               | 57 |
| II  | Malaria . . . . .                    | 58 |
| A   | Introduction . . . . .               | 58 |
| B   | Sporozoite antigens . . . . .        | 59 |
| C   | Blood-stage antigens . . . . .       | 63 |
| D   | Genes of <i>Plasmodium</i> . . . . . | 74 |
| III | Leishmaniasis . . . . .              | 76 |
| IV  | Acknowledgements . . . . .           | 83 |
| V   | References . . . . .                 | 84 |

## The production of foreign proteins in mammalian cells

Mary M. Bendig

|    |                                                     |     |
|----|-----------------------------------------------------|-----|
| I  | Introduction . . . . .                              | 91  |
| II | Mammalian cell expression systems . . . . .         | 92  |
| A  | High gene copy number . . . . .                     | 94  |
| B  | Transcriptional and translational signals . . . . . | 102 |
| C  | Specialized host cells . . . . .                    | 104 |

|      |   |                                                           |     |
|------|---|-----------------------------------------------------------|-----|
| III  | D | Regulatable protein production . . . . .                  | 106 |
|      | A | Glucocorticoid induction . . . . .                        | 107 |
|      | B | Induction by heavy metals . . . . .                       | 108 |
|      | C | Induction by heat shock . . . . .                         | 108 |
|      | D | Regulation of DNA replication . . . . .                   | 110 |
| IV   |   | Large-scale culture and production . . . . .              | 111 |
| V    |   | Comparison of expression and production systems . . . . . | 115 |
|      | A | Production levels . . . . .                               | 115 |
|      | B | Authenticity of product . . . . .                         | 117 |
|      | C | Regulatory considerations . . . . .                       | 118 |
| VI   |   | Summary . . . . .                                         | 119 |
| VII  |   | Acknowledgements . . . . .                                | 121 |
| VIII |   | References . . . . .                                      | 121 |
