

CONTENTS OVERVIEW

Ascorbic acid.

Part I The Position of Biochemistry in the Sciences

Chapter 1 The Context of Biochemistry

Chapter 2 The Organization of Cells

Chapter 3 Water, Hydrogen Bonding, pH, and Buffers

1 Interview: John R. Riordan 2

6

25

42

Part II The Molecular Nature of Cellular Components

Chapter 4 The Molecules of Life

Chapter 5 Amino Acids and Peptides

Chapter 6 Carbohydrates

Chapter 7 Lipids

63 Interview: Sidney Altman 64

68

79

96

126

Interview: JoAnne Stubbe 146

Interview: Ponzy Lu 274

Interview: Jacqueline K. Barton 530

Part III The Dynamic Aspects of Biochemical Reactions	145
Chapter 8 Energy Requirements for Life: Thermodynamics	150
Chapter 9 The Three-Dimensional Structure of Proteins	164
Interchapter A Experimental Methods for Determining Protein Structure	197
Chapter 10 The Behavior of Proteins: Enzymes	213
Chapter 11 The Dynamics of Membrane Structure	254
 Part IV Metabolism	 273
Chapter 12 Metabolism and Electron Transfer	278
Chapter 13 Glycolysis: Anaerobic Oxidation of Glucose	293
Chapter 14 The Citric Acid Cycle	335
Chapter 15 Electron Transport and Oxidative Phosphorylation	359
Chapter 16 Lipid Metabolism	391
Chapter 17 Photosynthesis	427
Chapter 18 The Metabolism of Nitrogen	459
Interchapter B The Anabolism of Nitrogen-Containing Compounds	491
Chapter 19 Summary of Metabolism	505
 Part V The Workings of the Genetic Code	 529
Chapter 20 The Structure of Nucleic Acids	534
Chapter 21 Biosynthesis of Nucleic Acids	569
Chapter 22 The Biosynthesis of Proteins	599

CONTENTS

Mimosa blossom and foliage,
Louisiana.

Chapter 1 The Context of Biochemistry	6	Part I The Position	6
1.1 Some Basic Themes	7	of Biochemistry in the	7
1.2 Origins of Life	8	Sciences	1
1.3 Development of Cells	17	<i>Interview: John R. Riordan</i>	2
Chapter 2 The Organization of Cells	25		
2.1 Prokaryotes and Eukaryotes: Differences in Levels of Organization	26		
2.2 Prokaryotic Cells	28		
2.3 Eukaryotic Cells	29		
2.4 The Five-Kingdom Classification System	36		
2.5 Are There Life Forms Other Than Prokaryotes and Eukaryotes?	37		
2.6 Endosymbiotic Theory of the Origin of Eukaryotes	38		
Chapter 3 Water, Hydrogen Bonding, pH, and Buffers	42		
3.1 The Polar Nature of the Water Molecule	43		
3.2 The Hydrogen Bond	47		
3.3 Acids and Bases	50		
3.4 The Self-Dissociation of Water and the pH Scale	51		
<i>Box 3.1 The Henderson-Hasselbalch Equation</i>	53		
3.5 Titration Curves	54		
3.6 Buffers	55		
<i>Box 3.2 Some Physiological Consequences of Blood Buffering</i>	57		

Part II The Molecular Nature of Cellular Components	63
<i>Interview: Sidney Altman</i>	<i>64</i>

Chapter 4 The Molecules of Life	68
4.1 The Importance of Functional Groups in Biochemistry	69
4.2 Amino Acids	71
4.3 Monosaccharides	72
4.4 The Structure of Nucleic Acid Monomers	75
4.5 Lipids	75
 Chapter 5 Amino Acids and Peptides	 79
5.1 Amino Acids, Their General Formula and Three-Dimensional Structure	80
5.2 The Structures and Properties of the Individual Amino Acids	82
5.3 Titration Curves of the Amino Acids	85
5.4 The Peptide Bond	88
5.5 Some Small Peptides of Physiological Interest	89
<i>Box 5.1 Aspartame, the Sweet Peptide</i>	<i>90</i>
<i>Box 5.2 Peptide Hormones</i>	<i>93</i>
 Chapter 6 Carbohydrates	 96
6.1 Monosaccharides: Structure and Stereochemistry	97
6.2 Reactions of Monosaccharides	104
6.3 Oligosaccharides	110
<i>Box 6.1 Lactose Intolerance</i>	<i>112</i>
6.4 Polysaccharides	112
6.5 Glycoproteins	122
<i>Box 6.2 Glycoproteins, Blood Transfusions, and Cell-Cell Recognition</i>	<i>123</i>

A dose of the peptide hormone melanotropin evident on the black frog.

Glycine: an amino acid and possibly a neurotransmitter.

Chapter 7 Lipids	126	
7.1 The Definition of a Lipid	127	
7.2 The Chemical Nature of Various Types of Lipids	127	
<i>Box 7.1 Myelin and Multiple Sclerosis</i>	<i>132</i>	
7.3 Lipid-Soluble Vitamins	134	
<i>Box 7.2 The Chemistry of Vision</i>	<i>138</i>	
7.4 Prostaglandins and Leukotrienes	141	
 Chapter 8 Energy Requirements for Life: Thermodynamics	 150	
8.1 Energy and Change	151	
8.2 The Criterion for Spontaneity	152	
8.3 Standard States and the Standard Free Energy Change	153	
8.4 A Modified Standard State for Biochemical Applications	154	
8.5 Thermodynamics and Life	155	
8.6 (Optional) Hydrophobic Interactions: A Case Study in Thermodynamics	156	
 Chapter 9 The Three-Dimensional Structure of Proteins	 164	
9.1 Interplay of the Forces That Determine Protein Structure	165	
9.2 The Determination of Primary Structure	171	
9.3 Secondary Structure of Proteins	176	
9.4 Tertiary Structure of Proteins	182	
9.5 Quaternary Structure of Proteins	186	
<i>Box 9.1 Abnormal Hemoglobins</i>	<i>193</i>	
 Interchapter A Experimental Methods for Determining Protein Structure	 197	
A.1 Separation of Amino Acids: The Mode of Operation of an Amino Acid Analyzer	198	
A.2 Separation of Peptides	203	
A.3 Isolation of Proteins	207	
A.4 N-Terminal and C-Terminal Amino Acids	209	
		Part III The Dynamic Aspects of Biochemical Reactions 145
		<i>Interview: JoAnne Stubbe 146</i>

Chapter 10 The Behavior of Proteins: Enzymes	213
10.1 Enzymes Are Biological Catalysts	214
10.2 Catalysis: Kinetic vs. Thermodynamic Aspects of Reactions	214
10.3 Enzyme Kinetics	216
10.4 The Transition State in Enzymatic Reactions	218
10.5 Two Examples of Enzyme-Catalyzed Reactions	219
10.6 The Michaelis-Menten Approach to Enzyme Kinetics	221
10.7 Inhibition of Enzymatic Reactions	227
10.8 The Michaelis-Menten Model Does Not Describe the Behavior of Allosteric Enzymes	230
10.9 Models for the Behavior of Allosteric Enzymes	234
10.10 Zymogens: The Basis of Another Type of Control Mechanism in Enzyme Action	238
10.11 Active Site Events in Enzymes: A Look at Reaction Mechanisms	240
10.12 Types of Catalytic Mechanisms	246
10.13 Coenzymes	248
 Chapter 11 The Dynamics of Membrane Structure	 254
11.1 The Nature of Biological Membranes	255
11.2 Membrane Proteins	259
11.3 The Fluid Mosaic Model of Membrane Structure	260
11.4 Membrane Function	262
11.5 A Case Study in Membrane Behavior: The Neuromuscular Junction	266
 Part IV Metabolism	 273
<i>Interview: Ponzy Lu</i>	274
 Chapter 12 Metabolism and Electron Transfer	 278
12.1 The Nature of Metabolism	279
12.2 The Nature of Oxidation and Reduction	279
12.3 Biologically Important Oxidation-Reduction Reactions	281

Lecithin.

12.4	Coupling of Production and Use of Energy	284
12.5	Metabolism Proceeds in Stages: The Role of Coenzyme A in Activation Processes	287
Chapter 13	Glycolysis: Anaerobic Oxidation of Glucose	293
13.1	An Overview of the Glycolytic Pathway	294
13.2	Reactions of Glycolysis I: Conversion of Glucose to Glyceraldehyde 3-Phosphate	297
13.3	Reactions of Glycolysis II: Glyceraldehyde 3-Phosphate to Lactate	304
13.4	Energy Considerations in Glycolysis	312
13.5	Some Reactions Related to the Main Glycolytic Pathway	314
	<i>Box 13.1 Fetal Alcohol Syndrome</i>	<i>317</i>
13.6	The Pentose Phosphate Pathway—An Alternate Pathway for Glucose Metabolism	317
	<i>Box 13.2 The Pentose Phosphate Pathway and Hemolytic Anemia</i>	<i>325</i>
13.7	Gluconeogenesis	327
Chapter 14	The Citric Acid Cycle	335
14.1	The Role of the Citric Acid Cycle in Metabolism	336
14.2	Overview of the Citric Acid Cycle	337
14.3	Individual Reactions of the Citric Acid Cycle	340
14.4	Energetics and Control of the Citric Acid Cycle	352
14.5	The Glyoxylate Cycle: A Related Pathway	355
14.6	A Final Note	356
Chapter 15	Electron Transport and Oxidative Phosphorylation	359
15.1	The Role of Electron Transport in Metabolism	360
15.2	Standard Reduction Potentials	362
15.3	Standard Potentials and Energetics of Biochemical Oxidation-Reduction Reactions	363
15.4	Electron Transport from NADH to O ₂ Requires Three Membrane-Bound Complexes	365

Lecithin.

12.4	Coupling of Production and Use of Energy	284
12.5	Metabolism Proceeds in Stages: The Role of Coenzyme A in Activation Processes	287
Chapter 13	Glycolysis: Anaerobic Oxidation of Glucose	293
13.1	An Overview of the Glycolytic Pathway	294
13.2	Reactions of Glycolysis I: Conversion of Glucose to Glyceraldehyde 3-Phosphate	297
13.3	Reactions of Glycolysis II: Glyceraldehyde 3-Phosphate to Lactate	304
13.4	Energy Considerations in Glycolysis	312
13.5	Some Reactions Related to the Main Glycolytic Pathway	314
	<i>Box 13.1 Fetal Alcohol Syndrome</i>	<i>317</i>
13.6	The Pentose Phosphate Pathway—An Alternate Pathway for Glucose Metabolism	317
	<i>Box 13.2 The Pentose Phosphate Pathway and Hemolytic Anemia</i>	<i>325</i>
13.7	Gluconeogenesis	327
Chapter 14	The Citric Acid Cycle	335
14.1	The Role of the Citric Acid Cycle in Metabolism	336
14.2	Overview of the Citric Acid Cycle	337
14.3	Individual Reactions of the Citric Acid Cycle	340
14.4	Energetics and Control of the Citric Acid Cycle	352
14.5	The Glyoxylate Cycle: A Related Pathway	355
14.6	A Final Note	356
Chapter 15	Electron Transport and Oxidative Phosphorylation	359
15.1	The Role of Electron Transport in Metabolism	360
15.2	Standard Reduction Potentials	362
15.3	Standard Potentials and Energetics of Biochemical Oxidation-Reduction Reactions	363
15.4	Electron Transport from NADH to O ₂ Requires Three Membrane-Bound Complexes	365

15.5	The Coupling of Oxidation to Phosphorylation	371
15.6	The Mechanism of Coupling in Oxidative Phosphorylation	375
	<i>Box 15.1 Brown Adipose Tissue: A Case of Useful Inefficiency</i>	379
15.7	Cytochromes and Other Iron-Containing Proteins of Electron Transport	380
15.8	Respiratory Inhibitors Block the Flow of Electrons in Electron Transport	382
15.9	Shuttle Mechanisms Mediate Transport of Metabolites between Mitochondria and Cytoplasm	384
15.10	The ATP Yield from Complete Oxidation of Glucose	386
Chapter 16	Lipid Metabolism	391
16.1	The Metabolism of Lipids Provides Pathways for the Generation and Storage of Energy	392
16.2	Catabolism of Lipids	392
16.3	The Energy Yield from the Oxidation of Fatty Acids	396
16.4	Some Additional Reactions in the Oxidation of Fatty Acids	398
16.5	The Formation of "Ketone Bodies"	400
16.6	The Anabolism of Fatty Acids	401
16.7	The Anabolism of Acylglycerols and Compound Lipids	408
	<i>Box 16.1 Tay-Sachs Disease</i>	413
16.8	The Anabolism of Cholesterol	414
Chapter 17	Photosynthesis	427
17.1	The Reactions of Photosynthesis	428
17.2	Chloroplasts and Chlorophylls	429
	<i>Box 17.1 The Relationship Between Wavelength and Energy of Light</i>	433

17.3	The Reactions of Photosystems I and II	435
17.4	A Proton Gradient Drives the Production of ATP in Photosynthesis	439
17.5	A Comparison of Photosynthesis With and Without Oxygen: Evolutionary Implications	442
17.6	The Dark Reaction of Photosynthesis: Path of Carbon	443
17.7	An Alternate Pathway for Carbon Dioxide Fixation	453
Chapter 18	The Metabolism of Nitrogen	459
18.1	An Overview of Nitrogen Metabolism	460
18.2	Nitrogen Fixation	462
18.3	Feedback Control: A Unifying Theme in Nitrogen Metabolism	463
18.4	The Metabolism of Amino Acids: Anabolism	464
18.5	Essential Amino Acids	471
18.6	The Anabolism of Porphyrins	472
	<i>Box 18.1 Inborn Errors of Metabolism Involving Amino Acids and Their Derivatives</i>	<i>474</i>
18.7	Catabolism of Amino Acids: The Urea Cycle	475
18.8	Purine Nucleotide Metabolism: The Anabolism of Purine Nucleotides	477
18.9	Catabolic Reactions of Purine Nucleotides	480
	<i>Box 18.2 Lesch-Nyhan Syndrome</i>	<i>482</i>
18.10	Pyrimidine Nucleotide Metabolism: Anabolism and Catabolism	483
18.11	The Reduction of Ribonucleotides to Deoxyribonucleotides	486
18.12	The Conversion of dUDP to dTTP	488
Interchapter B	The Anabolism of Nitrogen-Containing Compounds	491
B.1	Glutamate as a Precursor of Proline and Arginine	492
B.2	The Aspartate Family	492
B.3	The Pyruvate Family	497

L-tryptophan.

B.4	The Aromatic Amino Acids	498
B.5	Histidine Biosynthesis	498
B.6	The Anabolic Pathway for IMP	502
Chapter 19	Summary of Metabolism	505
19.1	All Metabolic Pathways Are Related	506
19.2	The Citric Acid Cycle in Catabolism	506
19.3	The Citric Acid Cycle in Anabolism	509
19.4	Hormones and Second Messengers	514
19.5	A Final Look at Uses and Sources of Metabolic Energy	522
Part V	The	
	Workings of the	
	Genetic Code	529
	<i>Interview: Jacqueline K. Barton</i>	<i>530</i>
Chapter 20	The Structure of Nucleic Acids	534
20.1	Levels of Structure in Nucleic Acids	535
20.2	The Covalent Structure of Polynucleotides	535
20.3	The Structure of DNA	541
20.4	The Three Kinds of RNA and Their Structures	549
20.5	Determination of the Primary Structure of Nucleic Acids	554
20.6	Recombinant DNA	560
	<i>Box 20.1 The Maxam-Gilbert Method for DNA Sequencing</i>	<i>562</i>
20.7	Denaturation of DNA	565
Chapter 21	Biosynthesis of Nucleic Acids	569
21.1	The Flow of Genetic Information in the Cell	570
21.2	The Replication of DNA: Some General Considerations	571
21.3	The DNA Polymerase Reaction	574
21.4	DNA Replication Requires the Combined Action of Several Enzymes	577
	<i>Box 21.1 A Summary for DNA Replication in Prokaryotes</i>	<i>580</i>

DNA fibers.

21.5	Proofreading and Repair	580
21.6	Modification of DNA after Replication	583
	Box 21.2 The Sanger Method for Sequencing DNA	584
21.7	The Replication of DNA in Eukaryotes	584
21.8	Some Aspects of DNA Recombination	586
21.9	RNA Biosynthesis: Transcription of the Genetic Message	589
21.10	Post-Transcriptional Modification of RNA	591
Chapter 22	The Biosynthesis of Proteins	599
22.1	The Translation of the Genetic Message: Protein Biosynthesis	600
22.2	Amino Acid Activation	601
22.3	Chain Initiation	602
22.4	Chain Elongation	604
22.5	Chain Termination	607
22.6	Post-Translational Modification of Proteins	608
22.7	Polysomes and the Simultaneous Production of Several Copies of the Same Polypeptide	609
22.8	The Genetic Code	610
22.9	Genetic Regulation of Transcription and Translation	614
	Box 22.1 The Body's Defenses: The Immune System	618
