

Contents

Preface	xiii		
Table of Biological Concepts	xvii		
Chapter 1			
BIOLOGY AS A SCIENCE	1		
A. Science Is Based on Testing Falsifiable Hypotheses	1		
<i>Hypotheses Are Central to Science ■ What Is a Theory?</i>			
B. Testing Hypotheses Varies in Different Branches of Science	6		
<i>Experimental Science ■ Naturalistic Science</i>			
C. Revolutionary Science Differs From "Normal" Science	10		
<i>Scientific Revolutions ■ Molecular Genetics: A Paradigm in Biology</i>			
D. Science Occurs in a Cultural Context	12		
<i>Science: A Cross-Cultural Discipline ■ The Scientific Community</i>			
Chapter 2			
ETHICS AND SOCIAL DECISION MAKING	16		
A. Morals are Guidelines for Everyday Conduct	16		
<i>Moral Codes ■ Resolving Moral Conflicts</i>			
B. Ethical Systems Are Used to Analyze Moral Rules	18		
<i>Deontological Systems ■ Utilitarian Systems ■ Other Ethical Systems</i>			
C. Democratic Societies Make Ethical Decisions Collectively	22		
<i>Ethical Decision Making in Pluralistic Societies ■ Making Social Policy Decisions on Issues Involving Science and Technology</i>			
D. Animal Experimentation Raises Ethical Questions	25		
<i>Uses and Abuses of Animals ■ The Animal Rights Movement ■ Do Animals Have Rights? ■ Current Debates ■ Improving the Treatment of Animals ■ Humans as Experimental Subjects</i>			
Chapter 3			
HUMAN GENES AND GENOMES	34		
A. Inheritance Follows the Same Laws in Most Organisms	34		
<i>Genes ■ Chromosomes ■ DNA ■ Transcription and Translation ■ Mutations</i>			
B. Genes and Chromosomes Control Many Human Traits, Including Inherited Diseases	57		
<i>Mendelian Traits in Humans ■ Human Sex Chromosomes ■ Human Chromosomal Defects</i>			
C. There Are Many Ways of Dealing with Hereditary Risks and Other Medical Conditions	66		
<i>Identifying Genetic Causes for Traits ■ Diagnosis and Counseling ■ Altering Individual Genotypes ■ Altering the Gene Pool of Populations ■ Changing the Balance Between Genetic and Environmental Factors</i>			
D. Newer Technologies Offer Additional Choices	76		
<i>New Reproductive Technologies ■ Genetic Engineering</i>			

- E. The Human Genome Project Will Greatly Advance Our Knowledge 83
Restriction Fragment Length Polymorphisms (RFLPs) ■ Ethical and Legal Issues

Chapter 4

EVOLUTION 88

- A. The Darwinian Paradigm Reorganized Biological Thought 88
Pre-Darwinian Thought ■ The Development of Darwin's Ideas ■ Natural Selection ■ Descent with Modification ■ Fossils and the Fossil Record
- B. Creationists Challenge Evolutionary Thought 107
Pre-Darwinian Creationism ■ Early Twentieth-Century Creationism ■ Creationism Today
- C. Species Are Central to the Modern Evolutionary Paradigm 110
Populations and Species ■ How Do New Species Originate? ■ Higher Taxa
- D. Life Originated on Earth by Natural Processes 116
Oparin and Miller ■ Evidence of Early Life on Earth ■ Prokaryotic and Eukaryotic Cells ■ Kingdoms of Organisms
- E. Humans Are Products of Evolution 123
Australopithecus ■ Homo
- F. Evolution Continues Today 128
Continuing Evolution within Species ■ Cultural Change and Biological Evolution ■ Continued Biological Evolution in Humans ■ Interaction Between Cultural and Biological Evolution

Chapter 5

VARIATION AMONG HUMAN POPULATIONS 132

- A. Human Populations Vary at Many Levels 132
Variation within Populations ■ Variation Between Populations ■ Concepts of Race
- B. Genetics Can Help Us Understand Human Variation 142
Human Blood Groups and Geography ■ Isolated Populations and Genetic Drift ■ Reconstructing the History of Human Populations

- C. Many Human Traits Help Protect Against Malaria and Other Diseases 148
Malaria ■ Sickle-Cell Anemia and Resistance to Malaria ■ Thalassemia ■ Other Genetic Traits that Protect against Malaria ■ Population Genetics of Malaria Resistance ■ Other Diseases as Agents of Selection

- D. Natural Selection Causes Variations in Physiology 158
Human Variation in Physiology and Physique ■ Natural Selection, Skin Color, and Disease Resistance

Chapter 6

THE POPULATION EXPLOSION 164

- A. People Have Been Concerned about Population Growth for About 200 Years 165
Malthus's Views on Population ■ Recent Changes in Population Pressures
- B. Many Factors Influence Population Growth 167
Exponential (Geometric) Growth ■ Logistic Growth ■ Age Structure of Populations ■ Demographic Transition ■ The Effects of Population Growth
- C. Controlling Population Growth Raises Many Issues 175
Death Control ■ Birth Control ■ Cultural and Ethical Opposition to Birth Control ■ Population Control Movements ■ The Education of Women

Chapter 7

SOCIOBIOLOGY AND REPRODUCTIVE STRATEGIES 189

- A. Sociobiology Deals with Social Behavior 190
Learned and Inherited Behavior ■ The Paradigm of Sociobiology ■ Research Methods in Sociobiology ■ Instincts
- B. Social Organization Is Adaptive 196
The Biological Advantages of Social Groups ■ Simple Forms of Social Organization ■ Altruism: An Evolutionary Puzzle ■ The Evolution of Eusociality
- C. Reproductive Strategies Can Alter Fitness 205
Asexual versus Sexual Reproduction ■ r-Selection and K-Selection ■ Differences Between the Sexes ■ Mating Systems

- D. Primate Sociobiology Presents Added Complexities** 209
The Development of Primate Social Behavior
 ■ Social Organization among Primates
 ■ Reproductive Strategies among Primates ■ Some Examples of Human Behavior

Chapter 8

NUTRITION AFFECTS HEALTH 218

- A. Digestion Processes Food into Chemical Substances that the Body Can Absorb** 218
Chemical and Mechanical Processes in Digestion
 ■ The Digestive System
- B. All Humans Have Certain Dietary Requirements** 226
Caloric Needs ■ Carbohydrates ■ Lipids ■ Proteins ■ Fiber ■ Vitamins ■ Minerals
- C. Human Diets Vary among Populations** 242
Links Between Diet and Chronic Diseases
 ■ Natural Selection and Lactose Intolerance
 ■ Regional Variations in Nutrition
- D. Malnutrition Contributes to Poor Health** 244
Eating Disorders ■ Protein Deficiencies
 ■ Ecological Factors Contributing to Poor Diets
 ■ Effects of Poverty and War on Health
 ■ Micronutrient Malnutrition ■ Nutrition, Health, and the Immune System

Chapter 9

CANCER AND CANCER THERAPY 250

- A. Multicellular Organisms Are Organized Groups of Cells and Tissues** 250
Compartmentalization ■ Specialization
 ■ Cooperation and Homeostasis
- B. Cell Division is Closely Regulated in Normal Cells** 253
Cell Division ■ Regulation of Cell Division
 ■ Regulation of Gene Expression ■ Cellular Differentiation and Tissue Formation ■ Limits to Cell Division
- C. Cancer Results when Cell Division Is Uncontrolled** 263
Cancer at the Cellular Level ■ Cancer at the Organismal Level ■ Cancer at the Population Level

- D. Cancers Have Complex Causes and Multiple Risk Factors** 267

Inherited Cancers ■ Cancers Associated with Infectious Agents ■ Physical and Chemical Carcinogens ■ Dietary Factors in Cancer ■ Internal Resistance to Cancer ■ Social and Economic Factors

- E. Mechanisms of Carcinogenesis Are Incompletely Known** 273

Oncogenes and Proto-oncogenes ■ Mutagenesis and Carcinogenesis

- F. We Can Treat Many Cancers and Lower Our Risks for Many More** 277

Surgery, Radiation, and Chemotherapy ■ New Cancer Treatments ■ Cancer Management ■ Cancer Prevention

Chapter 10

BRAIN FUNCTIONS AND MALFUNCTIONS 284

- A. Brain Function Depends on the Activity of Brain Cells** 284
Structure of the Brain ■ Cells of the Nervous System ■ Nerve Impulses ■ Neurotransmitters
 ■ How the Brain Produces Movement
- B. Some Diseases Are Related to Neurotransmitter Malfunction** 297
Parkinsonism ■ Huntington's Disease
 ■ Alzheimer's Disease ■ Depression
 ■ Neurotransmitters and Other Diseases
- C. Biological Rhythms Govern Sleep and Wakefulness** 300
Sleep ■ Circadian Rhythms
- D. Learning Is a Product of Brain Activity** 304
The Neurobiology of Learning ■ Procedural Learning ■ Declarative Learning and Memory
 ■ Abstraction and Generalization

Chapter 11

THE USE AND ABUSE OF DRUGS 308

- A. Drugs Are Chemicals that Alter Biological Processes** 308
Definitions ■ Drug Activity in Organisms ■ Drug Receptors and Drug Action on Cells ■ Side Effects and Drug Interactions ■ Elimination of Drugs from the Body

B. Psychoactive Drugs Affect the Mind 317

Opiates and Opiate Receptors ■ Marijuana and THC Receptors ■ Nicotine and Nicotinic Receptors ■ Amphetamines: Agonists of Norepinephrine ■ LSD: An Agonist of Serotonin ■ Caffeine: A General Cellular Stimulant ■ Alcohol: A CNS Depressant

C. Some Psychoactive Drugs Are Addictive 324

Dependence and Withdrawal ■ Brain Reward Centers and Drug-Seeking Behaviors ■ Drug Tolerance

D. Drug Abuse Impairs Health 329

Drug Effects on the Health of Drug Users ■ Drug Effects on Embryonic and Fetal Development

E. Drug Use and Abuse Have Effects on Populations 333

Drug Abuse as a Public Health Problem ■ Social Attitudes Regarding Drug Use

Chapter 12**THE MIND–BODY CONNECTION 336****A. The Mind and the Body Interact 336**

What is Psychoneuroimmunology? ■ Historical Antecedents

B. The Immune System Maintains Health 338

A Sense Organ for Noncognitive Stimuli ■ The Lymphatic Circulation ■ Development of Immune Cells ■ Acquiring Specific Immunity ■ Mechanisms for Removal of Antigens ■ Feedback Loops Turn Off an Immune Response ■ Natural Immunity ■ Inflammation and Healing ■ Harmful Immune Responses ■ Plasticity of the Immune System

C. The Neuroendocrine System Consists of Neurons and Endocrine Glands 351

The Autonomic Nervous System ■ The Stress Response ■ The Relaxation Response ■ The Placebo Effect

D. The Neuroendocrine System Interacts with the Immune System 357

Shared Cytokines ■ Nerve Endings in Immune Organs ■ Studies of Cytokine Functions ■ Stress and the Immune System ■ Individual Variation in the Stress Response ■ Conditioned Learning in the Immune System ■ Voluntary Control of the Immune System ■ Changing Theories of Disease Causation

Chapter 13**AIDS AND HIV 367****A. AIDS Is an Immune System Deficiency 367**

The Immune System ■ Immunodeficiency

B. AIDS Is Caused by a Virus Called HIV 369

Discovery of the Connection Between HIV and AIDS ■ Establishing Cause and Effect ■ Viruses and the HIV Virus ■ Evolution of Virulence

C. HIV Infection Progresses in Certain Patterns, Often Leading to AIDS 379

Events in Infected CD4 Cells ■ Progression From HIV Infection to AIDS ■ Tests for HIV Infection ■ A Vaccine against AIDS? ■ Drug Therapy for People with AIDS

D. Knowledge of AIDS Transmission Can Help You to Avoid AIDS Risks 388

Routes of Transmission ■ Communicability ■ Susceptibility versus High Risk ■ Public Health and Public Policy ■ Worldwide Patterns of Infection

Chapter 14**BIOENGINEERING 398****A. Form and Function Concern Engineers and Biologists 399**

Scaling ■ Design Elements ■ Biomaterials ■ Adhesion ■ Implantable Devices ■ Assistive Devices

B. Engineering Principles Describe Flow and Pressure in Biological Fluids 410

Blood as a Fluid ■ Plant Fluids

C. Electrical Activity Occurs in Living Organisms 415

Bioelectrical Activity as a Diagnostic Tool ■ Biofeedback

D. Bioengineering Can Help Solve Environmental Problems 419

Bioremediation of Oil Spills ■ Bioremediation of Wastewater ■ Water Treatment

Chapter 15**PLANTS AND CROP PRODUCTION 429****A. Plants Capture the Sun's Energy and Make Food 429**

Photosynthesis ■ Tissue Specialization in Plants

B. Plants Make Many Other Useful Products	435	B. Extinction Reduces Biodiversity	464
<i>Plant Products of Use to Humans ■ Nitrogen Requirements</i>		<i>Extinction in the Past ■ Species Threatened with Extinction Today</i>	
C. Crop Yields Can Be Increased By Overcoming Various Limiting Factors	439	C. Some Entire Habitats Are Threatened	472
<i>Fertilizers ■ Soil Improvement and Conservation ■ Irrigation ■ Hydroponics ■ Chemical Pest Control ■ Integrated Pest Management ■ Altering Genetic Strains through Selection ■ Altering Plant Strains through Genetic Engineering</i>		<i>Tropical Rainforest Destruction ■ Desertification ■ Valuing Habitat</i>	
		D. Pollution Threatens Much of Life on Earth	485
		<i>Detecting and Measuring Pollution ■ A Case in Point: Acid Rain ■ Costs and Benefits</i>	
Chapter 16		Color Figures	
BIODIVERSITY, EXTINCTION, AND ENDANGERED HABITATS	459	Appendix: A Six-Kingdom Classification of Organisms	491
A. Biodiversity Means Variety among Living Species	459	Bibliography	495
<i>Cataloging and Categorizing Biological Diversity ■ How Biodiversity Affects our Lives</i>		Glossary	505
		Credits	515
		Index	519
