

Contents

Preface XV

CHAPTER ONE

Biochemistry: An Introduction 1

The Living World 4

- Bacteria 6
- Archaea 6
- Eukarya 7
- Viruses 8

Biomolecules 8

- Functional Groups of Organic Biomolecules 8
- Major Classes of Small Biomolecules 10

Biochemical Reactions 16

- Biochemical Reactions 16
- Energy 20
- Metabolism 21
- Biological Order 21

Overview of Genetic Information Processing 23

BIOCHEMICAL METHODS 1.1: An Introduction 25

Summary 26

Suggested Readings 26

Key Words 26

Review Questions 27

Thought Questions 28

CHAPTER TWO

Living Cells 29

Basic Themes 30

- Water 30
- Biological Membranes 31
- Self-Assembly 32
- Molecular Machines 33

Structure of Prokaryotic Cells 34

- Cell Wall 35
- Plasma Membrane 36
- Cytoplasm 37
- Pili and Flagella 38

Structure of Eukaryotic Cells 40

- Plasma Membrane 40
- Nucleus 42
- Endoplasmic Reticulum 44
- Ribosomes 44
- Golgi Apparatus 45
- Lysosomes 47
- Peroxisomes 49
- Mitochondria 50
- Plastids 51

SPECIAL INTEREST BOX 2.1: Endosymbiosis 54

- Cytoskeleton 54

SPECIAL INTEREST BOX 2.2: The Origin of Life 58

BIOCHEMICAL METHODS 2.1: Cell Technology 60

Summary 62

Suggested Readings 62

Key Words 63

Review Questions 63

Thought Questions 63

CHAPTER THREE

Water: The Medium of Life 65

Molecular Structure of Water 66

Noncovalent Bonding 67

- Ionic Interactions 68
- Hydrogen Bonds 68
- van der Waals Forces 68

Thermal Properties of Water 69

Solvent Properties of Water 71

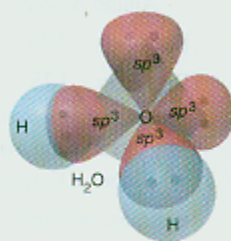

- Hydrophilic Molecules 71
- Hydrophobic Molecules 72
- Amphipathic Molecules 74
- Osmotic Pressure 74

Ionization of Water 77

- Acids, Bases, and pH 77

SPECIAL INTEREST BOX 3.1: Cell Volume Regulation and Metabolism 79

- Buffers 81
- Physiological Buffers 86

BIOCHEMICAL METHODS 3.1: Dialysis 88

Summary 89

Suggested Readings 89

Key Words 89

Review Questions 90

Thought Questions 91

CHAPTER FOUR**Energy 92**

Thermodynamics 93

The First Law of Thermodynamics 94

Second Law of Thermodynamics 96

Free Energy 97

Standard Free Energy Changes 98

Coupled Reactions 100

The Hydrophobic Effect Revisited 101

The Role of ATP 101

SPECIAL INTEREST BOX 4.1: Redox in the Deep 105

Summary 106

Suggested Readings 106

Key Words 106

Review Questions 106

Thought Questions 107

CHAPTER FIVE**Amino Acids, Peptides, and Proteins 108**

Amino Acids 110

Amino Acid Classes 112

Biologically Active Amino Acids 114

Modified Amino Acids in Proteins 115

Amino Acid Stereoisomers 115

Titration of Amino Acids 116

Amino Acid Reactions 120

Peptides 123

Proteins 125

Protein Structure 127

Fibrous Proteins 140

Globular Proteins 144

SPECIAL INTEREST BOX 5.1: Protein Poisons 146**BIOCHEMICAL METHODS 5.1: Protein Technology 152**

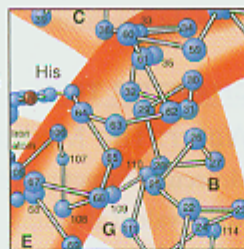

Summary 158

Suggested Readings 158

Key Words 158

Review Questions 159

Thought Questions 160

**CHAPTER SIX****Enzymes 161**

Properties of Enzymes 162

Classification of Enzymes 164

Enzyme Kinetics 167

Michaelis-Menten Kinetics 169

Lineweaver-Burk Plots 172

Enzyme Inhibition 173

Catalysis 177

Catalytic Mechanisms 177

The Role of Cofactors in Enzyme Catalysis 180

Effects of Temperature and pH on Enzyme-Catalyzed

Reactions 185

Detailed Mechanisms of Enzyme Catalysis 186

Enzyme Regulation 189

Genetic Control 189

Covalent Modification 189

Allosteric Regulation 190

Compartmentation 193

SPECIAL INTEREST BOX 6.1: Enzyme Technology:**Medical Applications 195**

Summary 197

Suggested Readings 197

Key Words 197

Review Questions 198

Thought Questions 199

CHAPTER SEVEN**Carbohydrates 200**

Monosaccharides 201

Monosaccharide Stereoisomers 202

Cyclic Structure of Monosaccharides 203

Important Monosaccharides 211

SPECIAL INTEREST BOX 7.1: Ascorbic Acid 212

Monosaccharide Derivatives 213

Disaccharides and Oligosaccharides 214

Polysaccharides 217

Homopolysaccharides 217

SPECIAL INTEREST BOX 7.2: Linen 220

Heteropolysaccharides 220

Glycoconjugates 223

Proteoglycans 223

Glycoproteins 225

SPECIAL INTEREST BOX 7.3: Biological Information and the Sugar Code 229

Summary	231
Suggested Readings	231
Key Words	231
Review Questions	232
Thought Questions	233

CHAPTER EIGHT

Carbohydrate Metabolism 234

Glycolysis	236
The Reactions of the Glycolytic Pathway	236
The Fates of Pyruvate	243
The Energetics of Glycolysis	245
Regulation of Glycolysis	245

SPECIAL INTEREST BOX 8.1: Fermentation: An Ancient Heritage 246

Gluconeogenesis	249
Gluconeogenesis Reactions	249
Gluconeogenesis Substrates	252
Gluconeogenesis Regulation	254

SPECIAL INTEREST BOX 8.2: This is Your Brain on Glucose 255

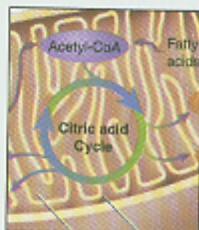

The Pentose Phosphate Pathway	256
Metabolism of Other Important Sugars	260
Fructose Metabolism	260
Galactose Metabolism	262
Mannose Metabolism	262
Glycogen Metabolism	263
Glycogenesis	263
Glycogenolysis	264
Regulation of Glycogen Metabolism	266

Summary	270
Suggested Readings	270
Key Words	270
Review Questions	270
Thought Questions	271

CHAPTER NINE

Aerobic Metabolism I: The Citric Acid Cycle 272

Oxidation-Reduction Reactions	274
Citric Acid Cycle	279
Conversion of Pyruvate to Acetyl-CoA	279
Reactions of the Citric Acid Cycle	284
Fate of Carbon Atoms in the Citric Acid Cycle	287
The Amphibolic Citric Acid Cycle	287
Citric Acid Cycle Regulation	289

SPECIAL INTEREST BOX 9.1: Cancer and Energy Metabolism 292

The Glyoxylate Cycle	293
----------------------	-----

SPECIAL INTEREST BOX 9.2: Hans Krebs and the Citric Acid Cycle 295

Summary	295
Suggested Readings	296
Key Words	296
Review Questions	296
Thought Questions	297

CHAPTER TEN

Aerobic Metabolism II: Electron Transport and Oxidative Phosphorylation 298

Electron Transport	299
Electron Transport and Its Components	300
Electron Transport Inhibitors	305
Oxidative Phosphorylation	307
The Chemiosmotic Theory	307

SPECIAL INTEREST BOX 10.1:

Electron Transfer: A Device of Life 308

- ATP Synthesis 312
- Control of Oxidative Phosphorylation 314
- The Complete Oxidation of Glucose 316
- Uncoupled Electron Transport and Heat Generation 319

Oxidative Stress 319

- Reactive Oxygen Species 320
- Antioxidant Enzyme Systems 324

A small, square inset image in the top right corner of the page. It shows a microscopic view of a cell or tissue, with a prominent green fluorescent structure, possibly a nucleus or a specific organelle, highlighted against a darker background. The image is somewhat blurry and has a grainy texture, typical of fluorescence microscopy.

SPECIAL INTEREST BOX 10.2: Glucose-6-Phosphate Dehydrogenase Deficiency 324

Antioxidant Molecules	326
-----------------------	-----

SPECIAL INTEREST BOX 10.3: Ischemia and Reperfusion 328

Summary	328
Suggested Readings	329
Key Words	329
Review Questions	329
Thought Questions	330

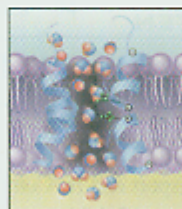

CHAPTER ELEVEN

Lipids and Membranes 331

Lipid Classes	332
Fatty Acids and Their Derivatives	332
Triacylglycerols	335
Wax Esters	337
Phospholipids	337

SPECIAL INTEREST BOX 11.1: The Eicosanoids 338

Sphingolipids	341
Sphingolipid Storage Diseases	343
Isoprenoids	344
Lipoproteins	348
Lipoproteins and Atherosclerosis	351
Membranes	353
Membrane Structure	353
SPECIAL INTEREST BOX 11.2: Against the Odds	354
BIOCHEMICAL METHODS 11.1: Membrane Methods	358
Membrane Function	361
SPECIAL INTEREST BOX 11.3 The Aquaporins	366
Summary	369
Suggested Readings	369
Key Words	370
Review Questions	370
Thought Questions	372

CHAPTER TWELVE

Lipid Metabolism 373

Fatty Acids and Triacylglycerols	374
Fatty Acid Degradation	378
The Complete Oxidation of a Fatty Acid	382
SPECIAL INTEREST BOX 12.1: Fatty Acid Oxidation: Double Bonds and Odd Chains	384
Fatty Acid Biosynthesis	387
SPECIAL INTEREST BOX 12.2: Eicosanoid Metabolism	388
Regulation of Fatty Acid Metabolism in Mammals	396
Membrane Lipid Metabolism	398
Phospholipid Metabolism	398
SPECIAL INTEREST BOX 12.3: Membrane Biogenesis	401
Sphingolipid Metabolism	401
Isoprenoid Metabolism	402
Cholesterol Metabolism	402
Sterol Metabolism in Plants	413
Summary	414
Suggested Readings	414
Key Words	414
Review Questions	414
Thought Questions	415

CHAPTER THIRTEEN

Photosynthesis 417

Chlorophyll and Chloroplasts	419
Light	424
Light Reactions	428
Photosystem II and Oxygen Generation	429
Photosystem I and NADPH Synthesis	431
Photophosphorylation	432

The Light-Independent Reactions	434
The Calvin Cycle	434
Photorespiration	436

SPECIAL INTEREST BOX 13.1: Starch and Sucrose Metabolism 438

SPECIAL INTEREST BOX 13.2: Alternatives to C3 Metabolism 440

Regulation of Photosynthesis	442
Light Control of Photosynthesis	442
Control of Ribulose-1,5-Bisphosphate Carboxylase	443
BIOCHEMICAL METHODS 13.1: Photosynthetic Studies	445
Summary	447
Suggested Readings	447
Key Words	447
Review Questions	448
Thought Questions	448

CHAPTER FOURTEEN

Nitrogen Metabolism I: Synthesis 449

Nitrogen Fixation	451
Amino Acid Biosynthesis	452
SPECIAL INTEREST BOX 14.1: Nitrogen Fixation and Agriculture	453
Amino Acid Metabolism Overview	453
Reactions of Amino Groups	454
Synthesis of the Amino Acids	460
Biosynthetic Reactions of Amino Acids	471
One-Carbon Metabolism	471
Glutathione	478
SPECIAL INTEREST BOX 14.2: Neurotransmitters	480
Alkaloids	483
SPECIAL INTEREST BOX 14.3: Parkinson's Disease and Dopamine	484
Nucleotides	484
Heme	496
SPECIAL INTEREST BOX 14.4: Lead Poisoning	498
Summary	499
Suggested Readings	499
Key Words	499
Review Questions	500
Thought Questions	501

CHAPTER FIFTEEN

Nitrogen Metabolism II: Degradation 502

Amino Acid Catabolism	503
SPECIAL INTEREST BOX 15.1: Protein Turnover	504
Deamination	505
Urea Synthesis	506

SPECIAL INTEREST BOX 15.2: Hyperammonemia 509

Control of the Urea Cycle 509

Catabolism of Amino Acid Carbon Skeletons 509

Degradation of Selected Neurotransmitters 517

SPECIAL INTEREST BOX 15.3: Disorders of Amino Acid Catabolism 519

Nucleotide Degradation 521

Purine Catabolism 521

Pyrimidine Catabolism 523

Heme Biotransformation 525

SPECIAL INTEREST BOX 15.4: Gout 526

Summary 528

Suggested Readings 528

Key Words 528

Review Questions 529

Thought Questions 529

CHAPTER SIXTEEN**Integration of Metabolism 530**

Overview of Metabolism 531

The Division of Labor 534

Small Intestine 534

Liver 534

Muscle 535

Adipose tissue 535

Brain 535

Kidney 535

The Feeding-Fasting Cycle 536

The Feeding Phase 536

The Fasting Phase 539

Inter cellular Communication 541

SPECIAL INTEREST BOX 16.1: Exercise and Nutrient Metabolism 542

The Hormone Cascade System 542

Growth Factors 547

SPECIAL INTEREST BOX 16.2: Hormone-Related Diseases 548

Mechanisms of Hormone Action 548

The Second Messengers 549

SPECIAL INTEREST BOX 16.3: Diabetes Mellitus 551

Steroid and Thyroid Hormone Mechanisms 556

The Insulin Receptor 558

BIOCHEMICAL METHODS 16.1: Hormone Methods 559

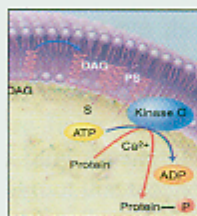

Summary 560

Suggested Readings 560

Key Words 560

Review Questions 561

Thought Questions 561

**CHAPTER SEVENTEEN****Nucleic Acids 562**

DNA 564

DNA Structure: The Nature of Mutation 568

DNA Structure: From Mendel's Garden to Watson and Crick 571

DNA Structure: Variations on a Theme 574

DNA Supercoiling 577

Chromosomes and Chromatin 579

Genome Structure 583

BIOCHEMICAL METHODS 17.1: Nucleic Acid Methods I 589

RNA 590

Transfer RNA 591

SPECIAL INTEREST BOX 17.1: Ancient DNA...and Not-So-Ancient DNA 592

Ribosomal RNA 594

Messenger RNA 595

Heterogeneous RNA and Small Nuclear RNA 596

Viruses 596

The Structure of Viruses 597

SPECIAL INTEREST BOX 17.2: Phylogenetic Analysis and Lateral Gene Transfer 598**SPECIAL INTEREST BOX 17.3: Viral "Lifestyles" 600**

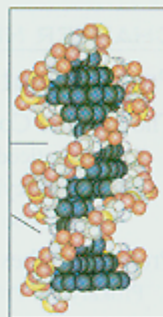

Summary 606

Suggested Readings 606

Key Words 606

Review Questions 607

Thought Questions 608

**CHAPTER EIGHTEEN****Genetic Information 609**

Genetic Information: Replication, Repair, and Recombination 610

DNA Replication 611

DNA Repair 620

DNA Recombination 622

BIOCHEMICAL METHODS 18.1: Genomics 630

Transcription 636

Transcription in Prokaryotes 637

Transcription in Eukaryotes 639

Gene Expression 643

Gene Expression in Prokaryotes 646

Gene Expression in Eukaryotes 648

SPECIAL INTEREST BOX 18.1: Carcinogenesis 656

Summary 658

Suggested Readings 658

Key Words 658

Review Questions	659
Thought Questions	659

CHAPTER NINETEEN

Protein Synthesis 661

The Genetic Code 663

Codon-Anticodon Interactions 665

The Aminoacyl-tRNA Synthetase Reaction: The Second Genetic Code 666

Protein Synthesis 668

Prokaryotic Protein Synthesis 671

Eukaryotic Protein Synthesis 676

SPECIAL INTEREST BOX 19.1: EF-TU: A Motor Protein 681

The Folding Problem 692

SPECIAL INTEREST BOX 19.2: Protein Folding and Human Disease 693

BIOCHEMICAL METHODS 19.1: Proteomics 698

Summary 699

Suggested Readings 699

Key Words 699

Review Questions 700

Thought Questions 700

Appendix A: Solutions 702

Glossary 735

Credits 747

Index 750
