

TABLE OF CONTENTS

Preface xi

1 Overview	1
I. Scope of Insect Ecology	3
II. Ecosystem Ecology	4
A. Ecosystem Complexity	6
B. The Hierarchy of Subsystems	6
C. Regulation	8
III. Environmental Change and Disturbance	9
IV. Ecosystem Approach to Insect Ecology	11
V. Scope of This Book	12

SECTION I ECOLOGY OF INDIVIDUAL INSECTS

2 Responses to Abiotic Conditions	17
I. The Physical Template	18
A. Biomes	18
B. Environmental Variation	23
C. Disturbances	28
II. Surviving Variable Abiotic Conditions	32
A. Thermoregulation	34
B. Water Balance	38
C. Air and Water Chemistry	41
D. Other Abiotic Factors	43

III. Factors Affecting Dispersal Behavior	45
A. Life History Strategy	45
B. Crowding	45
C. Nutritional Status	46
D. Habitat and Resource Conditions	46
E. Mechanism of Dispersal	47
IV. Responses to Anthropogenic Changes	49
V. Summary	51
 3 Resource Acquisition	 53
I. Resource Quality	53
A. Resource Requirements	54
B. Variation in Food Quality	55
C. Plant Chemical Defenses	58
D. Arthropod Defenses	65
E. Factors Affecting Expression of Defenses	69
F. Mechanisms for Exploiting Variable Resources	74
II. Resource Acceptability	77
III. Resource Availability	80
A. Foraging Strategies	81
B. Orientation	83
C. Learning	88
IV. Summary	92
 4 Resource Allocation	 95
I. Resource Budget	95
II. Allocation of Assimilated Resources	97
A. Resource Acquisition	97
B. Mating Activity	99
C. Reproductive and Social Behavior	104
D. Competitive, Defensive, and Mutualistic Behavior	108
III. Efficiency of Resource Use	117
A. Factors Affecting Efficiency	117
B. Tradeoffs	119
IV. Summary	121
 SECTION II	
POPULATION ECOLOGY	
 5 Population Systems	 125
I. Population Structure	125
A. Density	125
B. Dispersion	126
C. Metapopulation Structure	129
D. Age Structure	130
E. Sex Ratio	132
F. Genetic Composition	132
G. Social Insects	136

II. Population Processes	137
A. Natality	137
B. Mortality	138
C. Dispersal	141
III. Life History Characteristics	144
IV. Parameter Estimation	146
V. Summary	151
6 Population Dynamics	153
I. Population Fluctuation	154
II. Factors Affecting Population Size	157
A. Density-Independent Factors	158
B. Density-Dependent Factors	163
C. Regulatory Mechanisms	164
III. Models of Population Change	168
A. Exponential and Geometric Models	168
B. Logistic Model	169
C. Complex Models	170
D. Computerized Models	171
E. Model Evaluation	174
IV. Summary	176
7 Biogeography	179
I. Geographic Distribution	180
A. Global Patterns	180
B. Regional Patterns	181
C. Island Biogeography	182
D. Landscape and Stream Continuum Patterns	183
II. Spatial Dynamics of Populations	185
A. Expanding Populations	187
B. Metapopulation Dynamics	192
III. Anthropogenic Effects on Spatial Dynamics	195
A. Fragmentation	196
B. Disturbances to Aquatic Ecosystems	199
C. Species Introductions	200
IV. Conservation Biology	201
V. Models of Spatial Dynamics	204
VI. Summary	208

SECTION III
COMMUNITY ECOLOGY

8 Species Interactions	213
I. Classes of Interactions	213
A. Competition	214
B. Predation	219
C. Symbiosis	224

II. Factors Affecting Interactions	237
A. Abiotic Conditions	237
B. Resource Availability and Distribution	238
C. Indirect Effects of Other Species	239
III. Consequences of Interactions	246
A. Population Regulation	246
B. Community Regulation	246
IV. Summary	247

9 Community Structure **251**

I. Approaches to Describing Communities	252
A. Species Diversity	252
B. Species Interactions	261
C. Functional Organization	267
II. Patterns of Community Structure	269
A. Global Patterns	270
B. Biome and Landscape Patterns	271
III. Determinants of Community Structure	275
A. Habitat Area and Complexity	275
B. Habitat Stability	277
C. Resource Availability	277
D. Species Interactions	278
IV. Summary	281

10 Community Dynamics **283**

I. Short-Term Change in Community Structure	284
II. Successional Change in Community Structure	286
A. Patterns of Succession	288
B. Factors Affecting Succession	294
C. Models of Succession	298
III. Paleoecology	302
IV. Diversity versus Stability	305
A. Components of Stability	307
B. Stability of Community Variables	308
V. Summary	311

SECTION IV

ECOSYSTEM LEVEL

11 Ecosystem Structure and Function **315**

I. Ecosystem Structure	316
A. Trophic Structure	317
B. Spatial Variability	319
II. Energy Flow	319
A. Primary Productivity	320
B. Secondary Productivity	323
C. Energy Budgets	324

III. Biogeochemical Cycling	326
A. Abiotic and Biotic Pools	327
B. Major Cycles	328
C. Factors Influencing Cycling Processes	333
IV. Climate Modification	336
V. Ecosystem Modeling	340
VI. Summary	344
12 Herbivory	347
I. Types and Patterns of Herbivory	348
A. Herbivore Functional Groups	348
B. Measurement of Herbivory	348
C. Spatial and Temporal Patterns of Herbivory	352
II. Effects of Herbivory	358
A. Plant Productivity, Survival and Growth Form	360
B. Community Dynamics	367
C. Water and Nutrient Fluxes	373
D. Effects on Climate and Disturbance Regime	379
III. Summary	381
13 Pollination, Seed Predation, and Seed Dispersal	383
I. Types and Patterns of Pollination	384
A. Pollinator Functional Groups	384
B. Measurement of Pollination	387
C. Spatial and Temporal Patterns of Pollination	388
II. Effects of Pollination	390
III. Types and Patterns of Seed Predation and Dispersal	394
A. Seed Predator and Disperser Functional Groups	394
B. Measurement of Seed Production and Dispersal	395
C. Spatial and Temporal Patterns of Seed Predation and Dispersal	400
IV. Effects of Seed Predation and Dispersal	401
V. Summary	403
14 Decomposition and Pedogenesis	405
I. Types and Patterns of Detritivory and Burrowing	406
A. Detritivore and Burrower Functional Groups	406
B. Measurement of Detritivory, Burrowing, and Decomposition Rates	408
C. Spatial and Temporal Patterns in Processing of Detritus and Soil	411
II. Effects of Detritivory and Burrowing	416
A. Decomposition and Mineralization	416
B. Soil Structure, Fertility, and Infiltration	425
C. Primary Production and Vegetation Dynamics	430
III. Summary	433
15 Insects as Regulators of Ecosystem Processes	437
I. Development of the Concept	438
II. Ecosystems as Cybernetic Systems	442
A. Properties of Cybernetic Systems	442

B. Ecosystem Homeostasis	443
C. Definition of Stability	445
D. Regulation of Net Primary Production by Biodiversity	448
E. Regulation of Net Primary Production by Insects	454
III. Summary	459

SECTION V
SYNTHESIS

16 Synthesis	465
I. Summary	466
II. Synthesis	467
III. Applications	469
A. Management of Crop, Forest, and Urban "Pests"	470
B. Conservation/Restoration Ecology	474
C. Indicators of Environmental Conditions	475
D. Ecosystem Engineering	476
IV. Critical Issues	476
V. Conclusions	482

<i>Bibliography</i>	487
<i>Author Index</i>	537
<i>Taxonomic Index</i>	545
<i>Subject Index</i>	551
<i>Extended Permissions List</i>	569
