
Contents

1 Nature and functions of hereditary material, 1

- Identification of genetic material, 1
 - Transformation in bacteria, 2
 - Bacteriophage T2, 3
 - Tobacco mosaic virus, 4
- Nature of the hereditary material, 6
 - Geometric organization of DNA, 8
 - DNA replication, 12
 - Proteins and RNA, 16
 - Relationship of DNA to rRNA and tRNA, 22
 - Protein synthesis, 24
- Genetic code, 28
 - Codon-anticodon pairing, 33
- Summary, 34

2 Physical basis of inheritance, 37

- Viruses, 37
- Bacteria, 38
 - Transformation, 40
 - Conjugation, 41
 - Transduction, 42
- Higher organisms, 45
- Roles and types of cell division, 46
 - Mitosis, 47
 - Significance of mitosis, 50
 - Meiosis, 50
 - Significance of meiosis, 56
- Summary, 56

3 Fundamentals of genetics, 59

- Interactions of alleles, 59
 - Simple (complete) dominance, 59
 - Partial (incomplete) dominance, 64
 - Codominance (equal expression), 66
- Nonallelic gene interactions, 66
 - Combs in fowls (9:3:3:1 ratio), 66
 - Seed color in corn (9:7 ratio), 72
 - Coat color in rodents (9:3:4 ratio), 73
- Electrophoretic mobility, 74
- Summary, 76

4 Multiple-factor inheritance, 79

- Multiple-factor traits, 79
 - Color in wheat kernels, 79
 - Skin color in man, 80
 - Transgressive variation, 82
 - Polygenic inheritance, 82
 - Quantitative inheritance, 83
 - Statistical methods, 85
 - Measures of central tendency, 85
 - Measures of variation, 85
 - Measures of symmetry, 86
 - Measures of peakedness, 87
 - Normal curve, 87
 - A quantitative inheritance problem, 90
 - Summary, 91
-

5 Sex chromosomes and sex determination, 93

- The XO situation (not paired), 93
 - The XY situation (paired but not equal), 93
 - Sex chromosome linkage, 94
 - Sex chromosome linkage in *Drosophila*, 94
 - Sex chromosome linkage in man, 97
 - Sex chromosome linkage in birds, 99
 - Electrophoretic mobility, 100
 - Sex-influenced genes, 100
 - Sex-limited genes, 101
 - Sex determination, 101
 - Genic balance system of sex determination, 101
 - The Y chromosome in sex determination, 103
 - Sex determination in *Xiphophorus maculatus*, 104
 - Male haploidy in sex determination, 105
 - Sex differentiation in *Melandrium*, 105
 - Single genes and sex determination, 106
 - Cytoplasmic factors and sex determination, 106
 - Environmental control of sex determination, 107
 - Summary, 108
-

6 Chromosome numbers, 111

- Aneuploidy, 111
 - Autosomal aneuploidy, 113
 - Sex chromosome aneuploidy, 115
 - Mosaics and chimeras, 116
 - Aneuploidy and dermatoglyphics, 117
 - Origin of aneuploidy, 120
 - Euploidy and polyploidy, 121
 - Production of polyploids, 121
 - Types of polyploidy, 123
 - Problems in establishing polyploidy, 123
 - Polyploidy in animals, 124
 - Polyploidy in plants, 126
 - Summary, 128
-

7 Genes and chromosomes, 130

- Linkage, crossing-over, and genetic maps, 130
 - Cytological demonstration of crossing-over, 135
 - Linkage studies in bacteria, 140
 - Nature of recombination, 143
 - Chromosome pairing, 145
 - Molecular model of crossing-over, 147
 - Factors affecting recombination frequency, 148
 - Somatic crossing-over, 149
 - Chromosomal rearrangements, 150
 - Single chromosome breaks, 150
 - Two breaks in the same chromosome, 150
 - Two breaks in nonhomologous chromosomes, 155
 - Duplication, 157
 - Summary, 159
-

8 Extrachromosomal inheritance, 163

- Inheritance of color in plastids, 163
 - Mitochondria, 166
 - Origin of chloroplasts and mitochondria, 168
 - Kappa particles in *Paramecium*, 169
 - Mate-killer in *Paramecium*, 171
 - Metagon in *Paramecium*, 172
 - Sex ratio in *Drosophila*, 174
 - Episomes, 176
 - Lysogeny, 176
 - Sex factor in *Escherichia coli*, 178
 - Colicinogenic factors, 178
 - Resistance transfer factors, 178
 - Extrachromosomal inheritance in *Chlamydomonas*, 179
 - Maternal predetermination, 180
 - Shell-coiling in snails, 181
 - Summary, 182
-

9 Gene concepts, 185

- The gene as a mutational unit, 185
 - Chemical basis of mutations, 185
 - Transitions, 185
 - Additions and deletions, 191
 - Transversions, 192
 - Radiation-induced mutations, 193
 - Ionizing radiation, 193
 - Nonionizing radiation, 194
 - Crossing-over and mutation, 196
- The gene as a functional unit, 197
 - The rII locus of phage T4, 198
 - Complementation within the rII locus, 198
- The gene as a recombinational unit, 199
 - Pseudoalleles, 199
 - Recombination with rII cistrons, 200
 - Deletion mutants of the rII locus, 200
- Regulation of gene action, 201
 - Lac region of the *E. coli* chromosome, 201
- Summary, 204

10 Genes and metabolism, 207

- Factors affecting transcription, 207
 - Factors affecting translation, 207
 - Role of amino acids in translation, 208
 - Role of tRNA in translation, 208
 - Role of the ribosome in translation, 209
 - Gene end products, 211
 - Hemoglobins and the anemias, 211
 - Tryptophan synthetase, 215
 - Metabolic pathways and enzyme blocks, 218
 - Eye pigment production in *Drosophila*, 218
 - Cyanogenesis in white clover, 219
 - Phenylalanine and tyrosine metabolism in man, 220
 - Drug metabolism in man, 222
 - Primaquine sensitivity, 222
 - Isoniazid metabolism, 223
 - Barbiturate reaction, 223
 - Summary, 224
-

11 Genes and development, 226

- Regulation of DNA replication, 226
 - DNA synthesis and growth rates, 226
 - DNA synthesis and protein synthesis, 227
 - Regulation of DNA transcription, 228
 - Enzymes of *E. coli*, 228
 - RNA polymerase: core enzyme and sigma factor, 230
 - Puffs in chromosomes, 231
 - Hemoglobins in man, 234
 - Dosage compensation, 234
 - Regulation of mRNA translation, 237
 - Hemoglobin synthesis in rabbit reticulocytes, 237
 - Selective translation in virus-infected cells, 237
 - Phosphatase synthesis in an enucleate cell, 239
 - Nucleus-cytoplasm interaction, 239
 - Cap formation in *Acetabularia*, 239
 - Nuclear transplantation in Amphibia, 240
 - Tissue differentiation, 241
 - Totipotency in plants, 241
 - Totipotency in animals, 241
 - Tumor induction by viruses, 241
 - Lactic acid dehydrogenase, 244
 - Organ system differentiation, 244
 - Danforth's *Short-tail (Sd)* in mice, 245
 - Creeper* in fowl, 246
 - T* locus in mice, 248
 - Summary, 251
-

12 Behavior genetics, 254

- Studies on single-gene effects, 255
 - Walizing in mice, 255
 - Nest-cleaning in honeybees, 255
 - Courtship behavior in *Drosophila*, 256
 - Phenylpyruvic idiocy in man, 258
 - Chemotaxis in *Escherichia coli*, 258
 - Chromosome complement and human aggression, 260

- Studies on inbred lines, 261
 - Alcohol preference in mice, 261
 - Open-field behavior in mice, 263
 - Fighting behavior in mice, 264
 - Studies involving selection, 266
 - Selection for maze-learning in rats, 266
 - Selection for geotaxis in *Drosophila*, 268
 - Selection for mating speed in *Drosophila*, 270
 - Role of intermediate systems in behavior, 273
 - Role of nervous system in wasp behavior, 273
 - Role of endocrine system in rodent behavior, 274
 - Role of nucleic acids and proteins in learning and memory, 277
 - Learning and messenger-RNA, 277
 - Effect of actinomycin D on brain RNA synthesis and memory, 278
 - Effect of puromycin on brain protein synthesis and memory, 280
 - Summary, 281
-

13 Genes in populations, 283

- Hardy-Weinberg equilibrium, 283
 - Mutation, 286
 - Single mutation, 287
 - Recurrent mutation, 287
 - Reverse mutation, 287
 - Spontaneous mutation rates, 288
 - Genetic control of mutation rates, 288
 - Viral control of mutation rates, 290
 - Environmental influences on mutation rates, 291
 - LSD and genetic damage, 296
 - Selection, 297
 - Selection against recessive genes, 298
 - Effectiveness of selection in a eugenics program, 299
 - Selection against semidominant genes, 300
 - Selection against dominant genes, 301
 - Factors modifying selection against a gene, 302
 - Selection favoring heterozygotes, 302
 - Overcompensation, 303
 - Interaction of mutation and selection, 304
 - Mutation and selection involving rare recessives, 304
 - Mutation and selection involving dominants, 304
 - Mutation and selection including reverse mutation, 305
 - Our load of mutations, 305
 - Migration, 306
 - Genetic drift, 307
 - Genetic drift in a human isolate, 308
 - Summary, 309
-

14 Race and species formation, 312

- Genetic diversity in *Drosophila* populations, 312
 - Geographical distribution of various gene arrangements, 313
 - Races of *D. pseudoobscura*, 317
 - Altitudinal gradients of gene arrangements, 317
 - Seasonal cycles of gene arrangements, 318
 - Role of gene arrangements in particular environments, 318
- Genetic diversity in experimental populations, 321
- Selective advantage of the rare karyotype, 323

Genetic diversity in human populations, 324
ABO blood group genes, 324
Rh blood group genes, 326
Hemoglobin genes, 327
Human races, 329
Species formation, 330
Reproductive isolating mechanisms, 330
To prevent the meeting of potential mates, 331
To prevent the formation of zygotes, 331
To handicap species hybrids, 333
Selection for reproductive isolation, 334
Protein differences in <i>Drosophila</i> species, 336
Speciation in man, 336
Summary, 337
