List of contributors	xi
Preface	xiii
Foreword	xv
Acknowledgements	xxv
Part One: General Themes	I
1 Sperm competition and the evolution of ejaculates: towards a theory base	3
G. A. Parker	
I. Introduction	3
II. The logic of sperm competition games	5
III. Sperm competition and ejaculate expenditure across species: a fair raffle with no information	9
IV. How should information or phenotypic state influence a male's sperm allocation?	12
V. Sperm allocation under other mechanisms of sperm competition	24
VI. Sperm size	31
VII. Evolution of copulatory patterns: multiple versus single ejaculation	44
VIII. Female influences on sperm allocation	47
IX. Future	48
Dedication and acknowledgements	49
References	49
2 Sperm competition and sexual selection	55
Anders Pape Møller	
I. Sexual selection and sperm competition	55
II. Sperm competition and sexual selection on genitalia	61
III. Sexual selection during different stages of the reproductive cycle	64
IV. Sperm competition, sexually transmitted diseases, and sexual selection	79
V. Conclusions	81
Acknowledgements	82
References	82
3 Female roles in sperm competition	91
William G. Eberhard	
I. Introduction	91
II. Natural versus sexual selection and criteria for recognizing cryptic female choice	93
III. Precopulatory versus postcopulatory female influence on male competition	94
IV. Female preadaptations to bias fertilization success of sperm and thus exercise sexual selection	96
V. The relation between cryptic female choice and sperm competition <i>sensu stricto</i>	101

VI. What can a female gain from polyandry?	101
VII. A worst-case illustration of female-imposed biases	102
VIII. Male-female conflict	104
IX. Who is winning – a non-question?	110
X. Are these arguments applicable in nature?	111
Acknowledgements	113
References	114
 4 Paternity and paternal care	117
Jonathan Wright	
I. Introduction	117
II. Theoretical treatments	121
III. Extra-pair mating and 'fixed' paternity	125
IV. How paternity affects paternal care	129
V. Re-examining the data	133
Acknowledgements	139
References	139
 Part Two: Taxonomic Treatments	147
 5 Pollen competition in flowering plants	149
Lynda F. Delph and Kayri Havens	
I. Introduction	149
II. Historical perspective	153
III. Necessary requirements for pollen competition	154
IV. The evolutionary significance of pollen competition	156
V. Multiple paternity	161
VI. Heritable variation in pollen tube growth rates	163
VII. Maintaining variation in pollen tube growth rates	163
VIII. Future directions	165
Acknowledgements	166
References	166
 6 Sperm limitation, gamete competition, and sexual selection in external fertilizers	175
D. R. Levitan	
I. Introduction	175
II. Definitions and the scope of this review	176
III. Factors influencing fertilization success	179
IV. Broadcast spawning and Bateman's principle	189
V. Sexual selection and sexual dimorphism	192
VI. Sperm limitation, selection on egg size, and the evolution of anisogamy	202
Acknowledgements	206
References	206
 7 Mating conflicts and sperm competition in simultaneous hermaphrodites	219
Nico K. Michiels	
I. Introduction	219
II. What are hermaphrodites?	220

III. Why are hermaphrodites hermaphroditic?	221
IV. Sexual selection in hermaphrodites	226
V. Mating conflict	229
VI. Sperm competition in hermaphrodites	237
VII. Concluding remarks	247
Acknowledgements	247
References	248
8 Sperm competition in molluscs	255
Bruno Baur	
I. Introduction	255
II. Caudofoveata	256
III. Solenogasters	256
IV. Polyplacophora (Chitons)	257
V. Monoplacophora (segmented limpets)	257
VI. Gastropoda (snails and slugs)	258
VII. Bivalvia	283
VIII. Scaphopoda (tooth shells)	286
IX. Cephalopoda	286
X. Conclusions and future research directions	290
Acknowledgements	290
References	290
9 Sperm competition and sexual selection in spiders and other arachnids	307
Mark A. Elgar	
I. Introduction	307
II. Courtship, copulation and female choice	309
III. Multiple mating by females	316
IV. Sperm competition and the reproductive anatomy of spiders	318
V. Male adaptations for fertilization success	320
VI. Sexual selection and size dimorphism	330
VII. Conclusions and prospects	331
Acknowledgements	332
References	332
10 Sperm competition in insects: mechanisms and the potential for selection	341
L. W. Simmons and M. T. Siva-Jothy	
I. Introduction	341
II. Measurement and interpretation of sperm utilization patterns	342
III. Variation in sperm utilization patterns	346
IV. Mechanisms of sperm competition	360
V. Avoidance of sperm competition	366
VI. Sperm in competition: a male perspective	379
VII. Sperm manipulation: a female perspective	395
VIII. Sperm competition and sexual selection	412
IX. Conclusion	414
Acknowledgements	415
References	415
Appendix A	432

11 Sperm competition in fishes	435
C. W. Petersen and R. R. Warner	
I. Introduction	435
II. Sperm competition theory	437
III. Measuring sperm competition	438
IV. Gonadal investment	439
V. Sperm characteristics and male reproductive anatomy	446
VI. Patterns of paternity under sperm competition	449
VII. What determines the degree of sperm competition in a population?	451
VIII. Life history implications	453
IX. Looking ahead: future directions	453
Acknowledgements	457
References	458
 12 Sperm competition in amphibians	 465
T. Halliday	
I. Introduction	465
II. Anurans	466
III. Apodans	470
IV. Urodeles	470
V. Conclusion	493
Acknowledgements	494
References	494
 13 Sexual selection and sperm competition in reptiles	 503
M. Olsson and T. Madsen	
I. Introduction	503
II. Mate acquisition and sexual selection	504
III. Production, transfer and storage of spermatozoa and semen	521
IV. Sperm competition	531
Acknowledgements	539
References	540
Appendix A	565
Appendix B	570
 14 Sperm competition in birds: mechanisms and function	 579
T. R. Birkhead	
I. Introduction	579
II. Male morphology and sperm competition	581
III. Female morphology and sperm competition	583
IV. Multiple mating by females	585
V. Paternity guards	587
VI. Measuring extra-pair paternity	593
VII. Patterns of extra-pair paternity	594
VIII. Mechanisms of sperm competition	598
IX. Male or female control?	607
X. Conclusions	611
References	612

15 Reproduction, mating strategies and sperm competition in marsupials and monotremes	623
D. A. Taggart, W. G. Breed, P. D. Temple-Smith, A. Purvis and G. Shimmin	
I. Introduction	623
II. The monotremes	624
III. The marsupials	629
IV. Concluding comments	655
Acknowledgements	656
References	656
 16 Sperm competition in mammals	 667
Montserrat Gomendio, Alexander H. Harcourt and Eduardo R. S. Roldán	
I. How widespread is sperm competition in mammals?	667
II. The female tract as an arena	676
III. Mechanisms of sperm competition in mammals	692
IV. What has sperm competition selected for in the male mammal?	699
V. Do females promote or accept sperm competition?	720
VI. Implications for mating systems	723
VII. Humans	728
VIII. Conclusion	734
Acknowledgements	736
References	736
Appendix I	752
 17 Sperm competition, sexual selection and different routes to fitness	 757
T. R. Birkhead and A. P. Møller	
I. Introduction	757
II. Mechanisms	760
III. Functional significance	769
IV. Conclusions	776
References	777
 Index	 783
