

Brief Table of Contents

1

The Scene of Action, 1

2

The Molecules from Which We Are Made, 47

3

Energetics of Biochemical Reactions, 151

4

How Molecules Stick Together, 182

5

Membranes and Cell Coats, 252

6

Enzymes: The Protein Catalysts of Cells, 301

7

The Kinds of Reactions Catalyzed by Enzymes, 353

8

Coenzymes—Nature's Special Reagents, 428

9

Organization of Metabolism: Catabolic Pathways, 517

10

How Oxygen Meets the Electrons with Generation of ATP, and Other Stories, 559

11

Biosynthesis: How New Molecules Are Put Together, 630

12

Some Specific Pathways of Metabolism of Carbohydrates and Lipids, 680

13

Light in Biology, 744

14

The Metabolism of Nitrogen-Containing Compounds, 805

15

Biochemical Genetics and the Synthesis of Nucleic Acids and Proteins, 891

16

Growth, Differentiation, and Chemical Communication between Cells, 1000

APPENDIX. The Construction of Molecular Models, 1049

Subject Index, 1051
