PART I General Methods to Study Intermediate Filament Proteins – From Molecules to Disease

1. Isolation, Characterization, and *In Vitro* Assembly of Intermediate Filaments

Harald Herrmann, Laurent Kreplak, and Ueli Aepli

I. Introduction	3
II. Materials and Methods	6
III. Pearls and Pitfalls	19
IV. Concluding Remarks	20
References	21

2. Intermediate Filament Protein Structure Determination

Sergei V. Strelkov, Laurent Kreplak, Harald Herrmann, and Ueli Aepli

I. Introduction	25
II. Approaches and Methods	26
III. Pearls and Pitfalls	39
IV. Concluding Remarks	40
References	40

3. Intracellular Microrheology as a Tool for the Measurement of the Local Mechanical Properties of Live Cells

Thomas P. Kole, Yüder Tseng, and Denis Wirtz

I. Introduction	46
II. Materials and Instrumentation	53

III. Procedures	54
IV. Pearls and Pitfalls	60
V. Concluding Remarks	61
References	62
 4. Developing Mouse Models to Study Intermediate Filament Function	
<i>Thomas M. Magin, Michael Hesse, Roland Meier-Bornheim, and Julia Reichelt</i>	
I. Introduction	65
II. Essential Materials and Methods	67
III. Websites, Tables, Reagents, and Vendors of Interest	91
References	92
 5. Uncovering the Roles of Intermediate Filaments in Apoptosis	
<i>Normand Marceau, Stéphane Gilbert, and Anne Loranger</i>	
I. Introduction	96
II. Materials and Instrumentation	106
III. Procedures	109
IV. Pearls and Pitfalls	120
V. Conclusion and Perspectives	121
References	122
 6. Molecular Genetics Methods for Human Intermediate Filament Diseases	
<i>Frances J. D. Smith, Aileen Sandilands, and W. H. Irwin McLean</i>	
I. Introduction	132
II. Materials and Instrumentation	139
III. Procedures	139
IV. Pearls and Pitfalls	152
V. Discussion and Concluding Remarks	154
References	158
 7. Intermediate Filaments and Multiparameter Flow Cytometry for the Study of Solid Tumors	
<i>Math P. G. Leers</i>	
I. Introduction	163
II. Materials and Instrumentation	177

III. Procedures	191
IV. Comments	196
V. Pearls and Pitfalls	198
References	199

8. Intermediate Filament Protein Inclusions

Kurt Zatloukal, Conny Stumptner, Andrea Fuchsichler, Elke Janig, and Helmut Denk

I. Introduction	206
II. Materials and Instrumentation	216
III. Procedures	218
IV. Pitfalls	224
V. Discussion	224
References	225

9. Stress Models for the Study of Intermediate Filament Function

E. Birgitte Lane and Milos Pekny

I. Introduction	230
II. Materials and Instrumentation	249
III. Procedures	251
IV. Pitfalls	256
V. Discussion/Concluding Remarks	258
References	258

PART II General Methods to Study Intermediate Filament Proteins and Gene Regulation

10. Regulation of Intermediate Filament Gene Expression

Satrajit Sinha

I. Introduction	267
II. Materials	277
III. Procedures	278
IV. Pitfalls	292
V. Discussion and Concluding Remarks	293
References	293

11. Fluorescence-Based Methods for Studying Intermediate Filaments	
<i>Eric W. Flitney and Robert D. Goldman</i>	
I. Introduction	298
II. Materials and Methods	301
III. Pearls and Pitfalls	310
IV. Discussion	313
References	318
 12. Imaging of Keratin Dynamics during the Cell Cycle and in Response to Phosphatase Inhibition	
<i>Reinhard Windoffer and Rudolf E. Leube</i>	
I. Introduction	322
II. Materials and Instrumentation	324
III. Procedures	327
IV. Pearls and Pitfalls	344
V. Discussion and Concluding Remarks	348
References	349
 13. Approaches to Study Phosphorylation of Intermediate Filament Proteins Using Site-Specific and Phosphorylation State-Specific Antibodies	
<i>Aie Kawajiri and Masaki Inagaki</i>	
I. Introduction	354
II. Materials and Instrumentation	355
III. Procedures	357
IV. Pearls and Pitfalls	369
V. Discussion and Concluding Remarks	370
References	370
 14. Approaches to Study Posttranslational Regulation of Intermediate Filament Proteins	
<i>Vitaly Kochin, Hanna-Mari Pallari, Harish Pant, and John E. Eriksson</i>	
I. Introduction	374
II. Materials and Methods: Characterization of Intermediate Filament Phosphorylation	391
III. Pearls and Pitfalls	403
IV. Conclusions	404
References	404

PART III Methods to Study Specific Intermediate Filament Proteins in Mammalian Systems

15. Hair Keratins and Hair Follicle-Specific Epithelial Keratins

Lutz Langbein, Herbert Spring, Michael A. Rogers, Silke Praetzel, and Juergen Schweizer

I. Introduction	414
II. Procedures and Comments	417
III. Pitfalls and Problems	445
References	448

16. Skin: An Ideal Model System to Study Keratin Genes and Proteins

Kelsie M. Bernot, Pierre A. Coulombe, and Pauline Wong

I. Introduction	454
II. Collection of Mouse Skin Tissue for Analysis	462
III. Preparation of Tissues for Morphological Studies	463
IV. Cell Culture Studies	468
V. Preparation and Analysis of Protein and RNA from Tissues and Cells	473
VI. Pearls and Pitfalls	477
VII. Conclusion	480
References	484

17. Studying Simple Epithelial Keratins in Cells and Tissues

Nam-On Ku, Diana M. Toivola, Qin Zhou, Guo-Zhong Tao, Bihui Zhong, and M. Bishr Omary

I. Introduction	489
II. Materials and Methods	492
III. Pearls and Pitfalls	511
IV. Concluding Remarks	513
References	514

18. Muscle Intermediate Filament Proteins

Richard M. Robson, Ted W. Huiatt, and Robert M. Bellin

I. Introduction	519
II. Materials	524
III. Procedures	525

IV. Pearls and Pitfalls	547
V. Concluding Remarks	548
References	549
 19. [³⁵ S]Methionine Metabolic Labeling to Study Axonal Transport of Neuronal Intermediate Filament Proteins <i>In Vivo</i>	
<i>Stéphanie Millecamps and Jean-Pierre Julien</i>	
I. Introduction	555
II. Materials and Instrumentation	560
III. Procedures	561
IV. Comments	565
V. Pitfalls	566
References	566
 20. Lamins	
<i>Georg Krohne</i>	
I. Introduction	574
II. Materials	576
III. Purification of Lamins Produced in Bacteria	579
IV. Production of Lamins in Insect Cells Using the Baculovirus System	586
V. Selection of Cultured Cells and Tissues for Lamin Enrichment	588
VI. Enrichment of Lamins from Isolated Mammalian Liver Nuclei	588
VII. Enrichment of Lamins from Cultured Cells (Tested for <i>Xenopus</i> A6 Cells and HeLa Cells)	591
VIII. Immunoprecipitation of Lamin from Cell Extracts	593
References	594
 21. The Intermediate Filament Systems in the Eye Lens	
<i>Ming Der Perng, Aileen Sandilands, Jer Kuszak, Ralf Dahm, Alfred Wegener, Alan R. Prescott, and Roy A. Quinlan</i>	
I. Introduction	598
II. Materials and Instrumentation	603
III. Procedures	607
IV. Pearls and Pitfalls	620
V. Discussion and Concluding Remarks	620
References	621

PART IV Methods to Study Specific Intermediate Filament Proteins in Non-Mammalian Systems

22. Fish Keratins

Michael Schaffeld and Jürgen Markl

I. Introduction	627
II. Materials, Procedures, and Pitfalls	630
III. Discussion and Concluding Remarks	663
References	668

23. Performing Functional Studies of *Xenopus laevis* Intermediate Filament Proteins Through Injection of Macromolecules into Early Embryos

Christine Gervasi and Ben G. Szaro

I. Introduction	674
II. Instrumentation and Materials	679
III. Procedures	686
IV. Pearls and Pitfalls	689
V. Discussion and Concluding Remarks	691
References	695

24. Intermediate Filaments in *Caenorhabditis elegans*

Alexandra Fridkin, Anton Karabinos, and Yosef Gruenbaum

I. Introduction	704
II. Intermediate Filaments in <i>C. elegans</i>	704
III. General Methodology	707
IV. Forming Intermediate Filaments <i>In Vitro</i>	708
V. Indirect Immunofluorescence Analysis	709
VI. Immunogold-Electron Microscopy Preembedding Staining of <i>C. elegans</i> Embryos	711
VII. Sample Preparation for Transmission Electron Microscopy Analysis of <i>C. elegans</i> Embryos	713
VIII. Live Imaging of <i>C. elegans</i>	714
References	716

PART V Methods to Study Intermediate Filament Associated Proteins

25. Plectin

Günther A. Reznicek, Lubomír Janda, and Gerhard Wiche

I. Introduction	722
II. Materials and Methods	731
III. Pearls and Pitfalls	744
IV. Concluding Remarks	750
References	750

26. *In Vitro* Methods for Investigating Desmoplakin–Intermediate Filament Interactions and Their Role in Adhesive Strength

Tracie Y. Hudson, Lionel Fontao, Lisa M. Godsel, Hee-Jung Choi, Arthur C. Huen, Luca Borradori, William I. Weis, and Kathleen J. Green

I. Introduction	758
II. Materials and Methods	759
III. Pitfalls and Pearls	780
IV. Discussion	783
References	784

27. Studying Cytolinker Proteins

Dmitry Goryunov, Conrad L. Leung, and Ronald K. H. Liem

I. Introduction	787
II. Methods for Studying Cytolinker Proteins	789
III. Pearls and Pitfalls	811
IV. Concluding Remarks	814
References	815

28. Keratin Bundling Proteins

Pawel Listwan and Joseph A. Rothnagel

I. Introduction	817
II. Methods	822
III. Pearls and Pitfalls	825
IV. Concluding Remarks	825
References	826

29. Lamin-Associated Proteins

Cecilia Östlund and Howard J. Worman

I. Introduction	829
II. Materials	847
III. Procedures	847
IV. Pearls and Pitfalls	853
V. Discussion and Concluding Remarks	854
References	854
