

BRIEF CONTENTS

I. INTRODUCTION AND BACKGROUND	1	17. Glycogen Metabolism	461
1. Life	2	18. Transport through Membranes	484
2. Aqueous Solutions	29	19. The Citric Acid Cycle	506
3. Thermodynamic Principles: A Review	42	20. Electron Transport and Oxidative Phosphorylation	528
II. BIOMOLECULES	57	21. Other Pathways of Carbohydrate Metabolism	561
4. Amino Acids	59	22. Photosynthesis	586
5. Techniques of Protein Purification	75	23. Lipid Metabolism	618
6. Covalent Structures of Proteins	108	24. Amino Acid Metabolism	678
7. Three-Dimensional Structures of Proteins	144	25. Energy Metabolism: Integration and Organ Specialization	730
8. Protein Folding, Dynamics, and Structural Evolution	193	26. Nucleotide Metabolism	740
9. Hemoglobin: Protein Function in Microcosm	210	V. EXPRESSION AND TRANSMISSION OF GENETIC INFORMATION	771
10. Sugars and Polysaccharides	245	27. DNA: The Vehicle of Inheritance	772
11. Lipids and Membranes	271	28. Nucleic Acid Structures and Manipulation	791
III. MECHANISMS OF ENZYME ACTION	315	29. Transcription	852
12. Introduction to Enzymes	316	30. Translation	893
13. Rates of Enzymatic Reactions	329	31. DNA Replication, Repair, and Recombination	948
14. Enzymatic Catalysis	355	32. Viruses: Paradigms for Cellular Functions	987
IV. METABOLISM	393	33. Eukaryotic Gene Expression	1032
15. Introduction to Metabolism	394	34. Molecular Physiology	1086
16. Glycolysis	425
