

Contents

PART I The internal environment

The cell and body fluids	1
Membrane transport	7
Body water and body fluid	19
The blood	20
Haemostasis: blood coagulation	22
The red blood corpuscles (erythrocytes)	32
Deficiency anaemias	39
The white blood corpuscles (leucocytes)	51
The spleen	54
Immunity and inflammation	54

PART II The heart and circulation

General considerations	65
The capillary circulation	81
Veins and venous return	90
Structure and properties of the heart	94
Measurement of cardiac output in man	108
Origin and spread of the cardiac impulse	112
Neural control of the cardiovascular system	123
Circulation through special regions	133
High blood pressure	152

PART III Respiration

Work of breathing	158
Neural control of respiration	167
Role of pulmonary stretch receptors	169
Proprioceptive afferents of respiratory muscles and their control	172
Role of other afferent nerves	173
Dyspnoea	176
The chemical regulation of respiration	196

PART IV The kidney and the regulation of body fluids

Structure and functions of the kidney	218
Physiology of micturition	237
Regulation of water balance and composition of body fluids by the kidney	240
Kidney function in disease	243
Effects on body fluids of derangement of the alimentary canal	245

PART V Muscle, and the nervous system

Skeletal muscle	248
The nervous system	260
Peripheral nerve—elementary considerations of functional characteristics	263
Nerve biophysics	267

Receptors	285
Peripheral nerves	287
The brain stem	293
Muscle tone	297
Postural reflexes	301
The cerebellum	308
The thalamus	313
The electroencephalogram	315
Structure of the cerebral cortex	318
Somatic sensory cortex and parietal lobe	320
Excitomotor areas, pyramidal tracts. Clinical hemiplegia	323
Modern concepts of pyramidal function	327
Connections and functions of the prefrontal lobes	337
The limbic system—limbic lobe and hypothalamus	341
Regulation of body temperature in man	346
The basal ganglia	358
Spinal lesions	361
The cerebrospinal fluid	364
 PART VI The special senses	
The ear	370
The eye	376
The chemical senses	389
Pain	394
 PART VII The autonomic nervous system	
Chemical transmission	405
The adrenal medulla	417
Chemical transmission in the central nervous system	419
 PART VIII Digestion	
Structure of the gastrointestinal (GI) tract	422
The stomach	424
The liver	439
 PART IX Metabolism	
Chemical transformation and energy release	445
Carbohydrate metabolism	449
Fat metabolism	457
Protein metabolism	463
 PART X Nutrition	
Dietary requirements	482
The vitamins	488
 PART XI Endocrine glands	
Introduction	497
The endocrine functions of the pancreas	502
Pituitary and endocrine hypothalamus	512
The pineal gland	525
Regulation of growth	526
The adrenal cortex	529
The thyroid	537
Calcium, phosphorus, parathyroid hormone, calcitonin, and vitamin D	546
The thymus	555
Local hormones	556

PART XII Physiology of reproduction

Sex determination and sex differentiation

563

Female reproductive system

566

Male reproductive system

575

Physiology of pregnancy

581

Physiology of the fetus and newborn

585

The mammary glands

597

Appendix
