

Contents

Notes on the use of this book	ix
Abbreviations	xi
1 Amino acids, amines, amides, peptides, and their derivatives	1
2 Carboxylic acids, alcohols, aldehydes, and ketones	33
3 Phosphate esters excluding nucleotides and coenzymes	55
4 Constituents of nucleic acids and related compounds	75
5 Spectral data and pK_a values for purines, pyrimidines, nucleosides, and nucleotides	103
6 Vitamins and coenzymes	115
7 Carbohydrates and related compounds	141
8 Lipids and long-chain fatty acids	167
9 Steroids	191
10 Porphyrins and related compounds	213
A Bile pigments and related compounds	220
B Porphyrins (excluding chlorophyll porphyrins)	222
C Iron porphyrins (haems, haematin)	228
D Chlorophylls and related pigments	232
11 Carotenoids	239
12 Plant growth regulators	245
13 Antimetabolites, antibacterial agents, and enzyme inhibitors	255
A Compounds affecting nucleic acids	255
B Protein synthesis inhibitors and amino acid analogues	276
C Compounds affecting membrane functions	284
D Inhibitors of mitochondrial and chloroplast function	302
E Inhibitors of steroid synthesis and function	312
F Other enzyme inhibitors	316
14 Pharmacologically active compounds	337
15 Artificial and natural substrates	350
A Electron donors, carriers, and acceptors	350
B Substrates for peptidases	360
C Substrates and inducers for glycosidases	364
D Substrates for phosphatases	370
E Substrates for esterases and lipases	374
16 Biochemical reagents	379
A Protective agents	379
B Reagents for protein modification	384

17	Stability constants for metal complexes	399
18	pH, buffers, and physiological media	417
19	Gel electrophoresis	449
20	Methods for the detection of biochemical compounds on paper and thin-layer chromatograms, with some notes on separation	453
21	Ion exchange, gel filtration, and affinity chromatography media	503
22	Isotopic data	529
23	Biochemical procedures	537
24	Definitions, formulae, and general information	553
25	Atomic weights	557
	Index	561
